AERONAUTICAL ENGINEERING

A Continuing Bibliography

Supplement 143

A selection of annotated references to unclassified reports and journal articles that were introduced into the NASA scientific and technical information system and announced in December 1981 in

- *Scientific and Technical Aerospace Reports (STAR)*
- *International Aerospace Abstracts (IAA).*

Scientific and Technical Information Branch 1982
National Aeronautics and Space Administration
Washington, DC

This supplement is available as NTISUB/141/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $5.00 domestic; $10.00 foreign.

INTRODUCTION

Under the terms of an interagency agreement with the Federal Aviation Administration this publication has been prepared by the National Aeronautics and Space Administration for the joint use of both agencies and the scientific and technical community concerned with the field of aeronautical engineering. The first issue of this bibliography was published in September 1970 and the first supplement in January 1971. Since that time, monthly supplements have been issued.

This supplement to *Aeronautical Engineering -- A Continuing Bibliography* (NASA SP-7037) lists 254 reports, journal articles, and other documents originally announced in December 1981 in *Scientific and Technical Aerospace Reports (STAR)* or in *International Aerospace Abstracts (IAA)*.

The coverage includes documents on the engineering and theoretical aspects of design, construction, evaluation, testing, operation, and performance of aircraft (including aircraft engines) and associated components, equipment, and systems. It also includes research and development in aerodynamics, aeronautics, and ground support equipment for aeronautical vehicles.

Each entry in the bibliography consists of a standard bibliographic citation accompanied in most cases by an abstract. The listing of the entries is arranged in two major sections, *IAA Entries* and *STAR Entries*, in that order. The citations, and abstracts when available, are reproduced exactly as they appeared originally in *IAA* and *STAR*, including the original accession numbers from the respective announcement journals. This procedure, which saves time and money, accounts for the slight variation in citation appearances.

Three indexes -- subject, personal author, and contract number -- are included.

An annual cumulative index will be published.

AVAILABILITY OF CITED PUBLICATIONS

IAA ENTRIES (A81-10000 Series)

All publications abstracted in this Section are available from the Technical Information Service, American Institute of Aeronautics and Astronautics, Inc. (AIAA), as follows: Paper copies of accessions are available at $7.00 per document up to a maximum of 40 pages. The charge for each additional page is $0.25. Microfiche(1) of documents announced in *IAA* are available at the rate of $3.00 per microfiche on demand, and at the rate of $1.25 per microfiche for standing orders for all *IAA* microfiche. The price for the *IAA* microfiche by category is available at the rate of $1.50 per microfiche plus a $1.00 service charge per category per issue. Microfiche of all the current AIAA Meeting Papers are available on a standing order basis at the rate of $1.50 per microfiche.

Minimum air-mail postage to foreign countries is $1.00 and all foreign orders are shipped on payment of pro-forma invoices.

All inquiries and requests should be addressed to AIAA Technical Information Service. Please refer to the accession number when requesting publications.

STAR ENTRIES (N81-10000 Series)

One or more sources from which a document announced in *STAR* is available to the public is ordinarily given on the last line of the citation. The most commonly indicated sources and their acronyms or abbreviations are listed below. If the publication is available from a source other than those listed, the publisher and his address will be displayed on the availability line or in combination with the corporate source line.

Avail: NTIS. Sold by the National Technical Information Service. Prices for hard copy (HC) and microfiche (MF) are indicated by a price code followed by the letters HC or MF in the *STAR* citation. Current values for the price codes are given in the tables on page viii.

Documents on microfiche are designated by a pound sign (#) following the accession number. The pound sign is used without regard to the source or quality of the microfiche.

Initially distributed microfiche under the NTIS SRIM (Selected Research in Microfiche) is available at greatly reduced unit prices. For this service and for information concerning subscription to NASA printed reports, consult the NTIS Subscription Section, Springfield, Va. 22161.

NOTE ON ORDERING DOCUMENTS: When ordering NASA publications (those followed by the * symbol), use the N accession number. NASA patent applications (only the specifications are offered) should be ordered by the US-Patent-Appl-SN number. Non-NASA publications (no asterisk) should be ordered by the AD, PB, or other *report* number shown on the last line of the citation, not by the N accession number. It is also advisable to cite the title and other bibliographic identification.

Avail: SOD (or GPO). Sold by the Superintendent of Documents, U.S. Government Printing Office, in hard copy. The current price and order number are given following the availability line. (NTIS will fill microfiche requests, at the standard $4.00 price, for those documents identified by a # symbol.)

---

(1) A microfiche is a transparent sheet of film, 105 by 148 mm in size, containing as many as 60 to 98 pages of information reduced to micro images (not to exceed 26:1 reduction).

Avail: NASA Public Document Rooms. Documents so indicated may be examined at or purchased from the National Aeronautics and Space Administration, Public Documents Room (Room 126), 600 Independence Ave., S.W., Washington, D.C. 20546, or public document rooms located at each of the NASA research centers, the NASA Space Technology Laboratories, and the NASA Pasadena Office at the Jet Propulsion Laboratory.

Avail: DOE Depository Libraries. Organizations in U.S. cities and abroad that maintain collections of Department of Energy reports, usually in microfiche form, are listed in *Energy Research Abstracts*. Services available from the DOE and its depositories are described in a booklet, *DOE Technical Information Center - Its Functions and Services* (TID-4660), which may be obtained without charge from the DOE Technical Information Center.

Avail: Univ. Microfilms. Documents so indicated are dissertations selected from *Dissertation Abstracts* and are sold by University Microfilms as xerographic copy (HC) and microfilm. All requests should cite the author and the Order Number as they appear in the citation.

Avail: USGS. Originals of many reports from the U.S. Geological Survey, which may contain color illustrations, or otherwise may not have the quality of illustrations preserved in the microfiche or facsimile reproduction, may be examined by the public at the libraries of the USGS field offices whose addresses are listed in this introduction. The libraries may be queried concerning the availability of specific documents and the possible utilization of local copying services, such as color reproduction.

Avail: HMSO. Publications of Her Majesty's Stationery Office are sold in the U.S. by Pendragon House, Inc. (PHI), Redwood City, California. The U.S. price (including a service and mailing charge) is given, or a conversion table may be obtained from PHI.

Avail: BLL (formerly NLL): British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. Photocopies available from this organization at the price shown. (If none is given, inquiry should be addressed to the BLL.)

Avail: Fachinformationszentrum, Karlsruhe. Sold by the Fachinformationszentrum Energie, Physik, Mathematik GMBH, Eggenstein Leopoldshafen, Federal Republic of Germany, at the price shown in deutschmarks (DM).

Avail: Issuing Activity, or Corporate Author, or no indication of availability. Inquiries as to the availability of these documents should be addressed to the organization shown in the citation as the corporate author of the document.

Avail: U.S. Patent and Trademark Office. Sold by Commissioner of Patents and Trademarks, U.S. Patent and Trademark Office, at the standard price of 50 cents each, postage free.

Other availabilities: If the publication is available from a source other than the above, the publisher and his address will be displayed entirely on the availability line or in combination with the corporate author line.

GENERAL AVAILABILITY

All publications abstracted in this bibliography are available to the public through the sources as indicated in the *STAR Entries* and *IAA Entries* sections. It is suggested that the bibliography user contact his own library or other local libraries prior to ordering any publication inasmuch as many of the documents have been widely distributed by the issuing agencies, especially NASA. A listing of public collections of NASA documents is included on the inside back cover.

SUBSCRIPTION AVAILABILITY

This publication is available on subscription from the National Technical Information Service (NTIS). The annual subscription rate for the monthly supplements is $55.00 domestic; $110.00 foreign. All questions relating to the subscriptions should be referred to NTIS, Attn: Subscriptions, 5285 Port Royal Road, Springfield Virginia 22161.

PILOT-AIRCRAFT SYSTEM REPONSE TO WIND SHEAR Interim Report
Barry S. Turkel and Walter Frost Washington NASA Nov. 1980 98 p refs
(Contract NAS8-33458)
(NASA-CR-3342) Avail: NTIS HC A05/MF A01 CSCL 04B

The nonlinear aircraft motion and automatic control model is expanded to incorporate the human pilot into simulations of aircraft response to wind to wind shear. The human pilot is described by a constant gains lag filter. Two runs are carried out using pilot transfer functions. Fixed-stick, autopilot, and manned computer simulations are made with an aircraft having characteristics of a small commuter type aircraft flown through longitudinal winds measured by a Doppler radar beamed along the glide slope. Simulations are also made flying an aircraft through sinusoidal head wind and tail wind shears at the phugoid frequency to evaluate the response of manned aircraft in thunderstorm wind environments. A81-10474 # **The design of blowing-cooled aircraft electrical machines (Voprosy konstruktsii produvaemykh aviatsionnykh elektricheskikh mashin).** V. I. Naumenko, O. G. Klochkov, and V. V. Bandurin (Akademiia Nauk Ukrainskoi SSR, Institut Elektrodinamiki, Kiev, Ukrainian SSR). *Tekhnicheskaia Elektrodinamika,* July-Aug. 1980, p. 81-87. In Russian.

The current status of air-cooled aircraft electrical machines is reviewed. The possibility of reducing the weight and size of air-cooled machines is discussed, with particular emphasis on the design of cooling systems for synchronous ac-generators. B.J.

AERONAUTICAL ENGINEERING

A Continuing Bibliography (Suppl. 143)

JANUARY 1982

IAA ENTRIES

A81-47142 **Aircraft recognition by means of monostatic radar (Signature d'avions à l'aide du radar monostatique).** J.-Y. Mevel and G. Launay (Rennes I, Université, Rennes, France). *(Société des Electriciens, des Electroniciens et des Radioélectriciens, Journée d'Etude sur la Reconnaissance des Formes et Signatures Radar, Paris, France, Jan. 30, 1980.) Annales des Télécommunications,* vol. 36, May-June 1981, p. 347-358. 16 refs. In French.

Consideration is given to the potential for aircraft recognition using a monostatic radar receiving echoes from the aircraft surface. The reconstruction of aircraft attitude with respect to a monostatic radar based on radar-derived trajectory data and wind data is examined and the parameters observable based on the radar echo are considered in relation to the possibility of shape recognition. It is shown that, although the geometrical reconstruction of aircraft shape by the classical monostatic tracking radar is probably impossible, signature identification may be possible through extended observation and comparison with a data bank. A signal analyzer used in an experimental study of aircraft identification by a tracking radar is then described and results of spectral analysis of measurements performed on a variety of propeller and jet aircraft are illustrated. A.L.W.

A81-47143 **An original method for the analysis of the power diffraction pattern of a radar target for shape recognition purposes (Méthode originale d'analyse du diagramme de diffraction en puissance d'une cible radar en vue de la reconnaissance des formes).** J. Saillard and G. Chassay (Rennes I, Université, Rennes, France). *(Société des Electriciens, des Electroniciens et des Radioélectriciens, Journée d'Etude sur la Reconnaissance des Formes et Signatures Radar, Paris, France, Jan. 30, 1980.) Annales des Télécommunications,* vol. 36, May-June 1981, p. 359-368. In French.

The modeling of an airborne radar target is currently accomplished by the replacement of the object by a number of appropriately distributed bright points. The present paper considers the number of bright points necessary for the proper representation of a radar objective and the effective far-field radar cross section of a system modeled by an ensemble of bright points in relation to the problem of target shape recognition. It is shown that the effective cross section may be expressed as the sum of interference patterns of each possible set of two bright points. Consideration of the bipoint interference functions reveals that they can in turn be represented by a combination of Chebyshev polynomials of the first and second kinds, which can be reduced to an amplitude-moduled circular function and used to derive object dimensions by means of Fourier analysis. An example is presented of the analysis of a specific linear isotropic multipoint. A.L.W.

A81-47268 # **A formulation of the shimmy problem for swiveling wheels (Ob odnoi postanovke zadachi o shimmi orientiruiushchikhsia koles).** V. I. Goncharenko, L. G. Lobas, and N. V. Nikitina (Akademiia Nauk Ukrainskoi SSR, Institut Mekhaniki, Kiev, Ukrainian SSR). *Prikladnaia Mekhanika,* vol. 17, Aug. 1981, p. 82-88. 8 refs. In Russian.

Equations of motion are derived for a two-wheel landing gear strut with independently rotating wheels and an oblique alignment axis of the swivel on the basis of an improved version of the formulation proposed by Keldysh (1945). In the present approach, the complex parameter I used in the Keldysh formulation is ignored but, instead, an additional degree of freedom (in the lateral direction) is introduced. Although this results in higher dimensionality of the configuration space and higher order of the system of differential equations, the experimental determinations of the landing gear alignment become unambiguous. V.L.

A81-47425 * **Annual survey of spaceflight safety systems: 11th supplement. Survey period - July 1980-June 1981.** N. E. Brown and J. W. Brown (NASA, Johnson Space Center, Houston, TX). *International Astronautical Federation, International Astronautical Congress, 32nd, Rome, Italy, Sept. 6-12, 1981, Paper 81-251.* 22 p. 13 refs.

Reports in the field of space flight safety applicable to current and future operational space activities which appeared between July 1980 and June 1981 are surveyed. Subjects in the area of flight rescue and safety during launch, on-orbit, reentry and landing phases include the major activities and findings of the first Shuttle test flight, a slidewire system for emergency egress from the Space Shuttle on the launch pad, and the testing of the Spacelab engineering model. In the area of human capabilities and crew roles, attention is given to reports of repairs to the Salyut 6 space station made by a Soyuz crew, and an assessment of weightlessness effects on space worker health and safety. Safety requirements for STS payloads including pressure vessels, and the Orbiter window system and for spacecraft testing are also presented, along with those for a television system to aid in monitoring astronaut extravehicular activities. For the operation of large space structures, reports include EVA equipment for satellite servicing and the safety aspects of connectors used in construction. Finally, attention is given to safety-related criteria in a study of Shuttle interactions with the proposed Space Operations Center. A.L.W.

A81-47533 # **Errors of phase VLF-navigation systems under conditions of auroral disturbances (Ob oshibkakh sistem fazovoi SDV-navigatsii v usloviiakh avroral'nykh vozmushchenii).** M. I. Beloglazov. *Radiotekhnika,* vol. 36, July 1981, p. 32-34. 5 refs. In Russian.

Experimental data on the operation of VLF navigation systems at high latitudes under conditions of the quiet and disturbed auroral ionosphere are analyzed. It is shown that the mean-square errors of position determination at distances of 6000-7000 km at high latitudes are 5-6 times greater than at midlatitudes. At distances of about 1000 km, errors at high latitudes are twice as great as those at midlatitudes for quiet conditions and four times greater than those at midlatitudes for disturbed conditions. B.J.

A81-47551 # **Development of the carbon fiber-reinforced side rudder for the Airbus (Entwicklung eines kohlefaserverstärkten Seitenruders für den Airbus).** D. Schulz (Messerschmitt-Bölkow-Blohm GmbH, Hamburg, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-055.* 15 p. In German. Research supported by the Bundesministerium für Forschung und Technologie and Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt. (MBB-UT-07-81)

Carbon-fiber-reinforced component parts have been developed to reduce aircraft weight, and thus render the aircraft more fuel efficient. The A310, designed for use by 1983, has spoilers, rudders, nose pieces, and fairings constructed of the carbon-fiber-reinforced material, which makes possible a 20% weight reduction over conventional components of light metals. Side rudders of the A300 and the A310 are compared, and goals such as an 18% weight reduction, acceptable maintenance costs, and similar manufacturing and safety standards are discussed. Construction limitations are considered, and material-specific problems are examined, including electrolytic corrosion, machinability, and the effects of humidity and temperature. Component tests are also conducted. It is found that the use of the carbon-reinforced component parts on aircraft as large as the A310 can lead to a 6000 kg weight reduction with a yearly savings of 45 million D.M. for a fleet of 30 aircraft. D.L.G.

A81-47552 **Active gust- and maneuver load control concepts, taking into account, as example, the Airbus A300. I - Design of a controller in the temporal domain for the alleviation of gust loads and the control of the effectiveness for stochastic gusts (Aktive Böen- und Manöverlastregelungs-Konzepte am Beispiel des Airbus A 300. I - Auslegung eines Reglers im Zeitbereich zur Böenlastminderung und Nachprüfung der Wirksamkeit für stochastische Böen).** J. Becker, O. Sensburg, and F. Weiss (Messerschmitt-Bölkow-Blohm GmbH, Ottobrunn, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-065A.* 55 p. 12 refs. In German. (MBB-FE-172/S/PUB/39)

An active gust load control concept was designed for an Airbus configuration with 10% span extension. The design was made in the temporal domain on the basis of a quasi-steady representation of the aerodynamics for a rigid-elastic aircraft. Maximum values for wing load reduction were determined for a specific case, taking into account the control of external aileron, spoilers, and the elevator. An inspection of the effectiveness of the designed control concepts was performed in the frequency range for stochastic gusts. Attention is given to results of flutter calculations, the relation between alleviation of gust load and damping of flutter, and the bending moment characteristics. G.R.

A81-47553 **Active gust- and maneuver load reduction concepts, taking into account, as an example, the Airbus A300. II - Design of a controller for gust and maneuver load reduction in the frequency range (Aktive Böen- und Manöverlastminderungs-Konzepte am Beispiel des Airbus A300. II - Auslegung eines Reglers zur Böen- und Manöverlastminderung im Frequenzbereich).** G. Beuck (Messerschmitt-Bölkow-Blohm GmbH, Ottobrunn, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-065B.* 27 p. 7 refs. In German. (MBB-UT-08-81)

A system which reduces surface loading due to vertical gusts and longitudinal maneuvers is considered. The employment of such a system in connection with an aircraft provides an approach for increasing the payload or the range of the aircraft. An investigation is conducted to explore the feasibility of using such an approach in the case of the A300 variant TA9. It is intended to retain the present wing structure of the A300B4 for the new design. Compared to the B4, the new aircraft is to have an extended wing tip and a greater payload. Currently existing A300 control surfaces are to be employed. The design of the controller for implementing the new system is discussed, taking into account an open and a closed loop system. The load reducing potential is determined along with the interior aileron, the three external spoilers, and the exterior aileron. G.R.

A81-47554 # **The calculation of transonic blade tip flow at helicopter rotors (Zur Berechnung der transsonischen Blattspitzenumströmung bei Hubschrauberrotoren).** H. Stahl and V. Mikulla (Messerschmitt-Bölkow-Blohm GmbH, Munich, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-025.* 26 p. 11 refs. In German. (MBB-UD-320-81-OE)

Differences regarding the flow around the wing for fixed-wing and rotor-wing aircraft are discussed. A description is presented of results which were obtained with the aid of a rotor computational program based on the (two-dimensional) blade-element theory. The particular problem regarding the theoretical treatment of the flow around the blade tip is related to the characteristics of this flow, which is three-dimensional, unsteady, and becomes transonic on the advancing blade in the case of high forward speeds. Theories based on potential theory are discussed, although the assumptions of the theories are not satisfied at the rotating wing. Calculations using such procedures show, however, that the representation of the real flow relations at the blade tip is quite good. The procedures have the disadvantage of very long computation times. Attention is also given to a three-dimensional computational procedure of fixed-wing aerodynamics, which has been modified for a utilization in rotor calculations by introducing a Mach number gradient along the rotor radius. G.R.

A81-47555 # **The calculation of separated flow at helicopter bodies (Zur Berechnung der abgelösten Strömung an Hubschrauberrümpfen).** G. Polz (Messerschmitt-Bölkow-Blohm GmbH, Munich, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-026.* 26 p. 17 refs. In German. (MBB-UD-321-81-OE)

In the case of helicopters, it is not always possible to avoid flow separation with wake formation at the rear of the fuselage. The wake region makes an analytical computation of the flow with the methods of the potential theory impossible. A survey of existing procedures for separated fuselage flows is provided, and a description is given of a computational model which is based on a combination of panel and boundary-layer computational procedures. The model makes use of a trailing body with uniform circulation distribution to simulate the wake region. The possibilities provided by the procedure are illustrated with the aid of pressure distribution and flowfield calculations. Results obtained in wind tunnel and flight tests are also shown. G.R.

A81-47556 **Design and construction of a model which is dynamically similar to the A310 wing (Auslegung und Bau eines dynamisch ähnlichen modells des A 310 Flügels).** H. Hönlinger (Messerschmitt-Bölkow-Blohm GmbH, Ottobrunn, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-035.* 31 p. In German. (MBB-FE-17/S/PUB/42)

In investigations conducted to evaluate the flutter characteristics of a wing with supercritical profile, it is necessary to take, for the transonic domain, into consideration also the effect of the steady angle of attack. An experimental verification of this effect requires a wind tunnel study of flutter models with particularly accurate profile geometry. A description is presented of the design and the construction of a flutter model for the A310 wing with supercritical profile. The requirements for the design of the model, in scale of 1:20, including, in addition to a high profile accuracy, also a simple and cost-effective method of construction. In the selected design, the stiffness distribution in the model is simulated by means of a simple steel box. Profile geometry and model mass distribution are imitated with the aid of a foam structure, covered with a glass-fiber laminate. A finite-element model was used for the design of a complex propulsion unit suspension, which was idealized by means of profile beams. G.R.

A81-47557 **Surface-oriented coordinates for boundary-layer calculations in the case of general configurations (Oberflächenorientierte Koordinaten für Grenzschichtberechnungen an allgemeinen Konfigurationen).** E. H. Hirschel (Messerschmitt-Bölkow-Blohm GmbH, Munich, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-014.* 26 p. 5 refs. In German. (MBB-FE-122/s/PUB/41)

The calculation of three-dimensional boundary layers requires the selection of a suitable coordinate system. A description is presented of an approach for obtaining surface-oriented, curvilinear, nonorthogonal, locally monoclinic coordinates for general wing and body configurations. It is shown that the boundary-layer coordinates for calculations of the first order present a special case of these coordinates. Metric tensor and curvature tensor of the surface are discussed, and relations are given for the transformation of Cartesian components of the frictionless external flow into boundary-layer coordinates. The employed tensorial concepts are used in the formulation of the boundary layer equations, and for the calculation of the streamlines of the frictionless external flow and boundary-wall streamlines. The application of the considered concepts is illustrated with the aid of specific examples of boundary-layer calculations involving aircraft wings and bodies. G.R.

A81-47562 # **Estimation of kinetic quantities of flight mechanics with a nonlinear observer (Schätzung flugmechanischer Bewegungsgrössen mit einem nichtlinearen Beobachter).** H. Seidel (Messerschmitt-Bölkow-Blohm GmbH, Hamburg, West Germany).

Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-067. 26 p. 18 refs. In German.

Investigations have been conducted regarding the employment of linear observers for a surveillance or a replacement of transducers. The considered study is concerned with an attempt to employ in the observer a nonlinear model in place of the linear one. The motivation for the study is related to the nonlinear characteristics of the mathematical models for the motions of flight mechanics. An adaptation of the model to the current flight conditions, which is necessary in the case of linear models, will not be needed if a nonlinear model is employed. The estimation of the variables of state for the longitudinal motion of the aircraft is discussed. The nonlinear differential equations which describe the symmetrical motion of an aircraft are considered, taking into account the state parameters airspeed, angle of attack, pitch (inclination), and pitch rate. Simulation results are presented, giving attention to steady and unsteady aerodynamic flight characteristics, and disturbances produced by gusts. A test shows that an estimate of the angle of attack with an accuracy of approximately 1 deg is possible. G.R.

A81-47563 # **European transonic wind tunnel ETW - Status of the project at the end of the predesign phase (Europäischer Transsonischer Windkanal ETW - Stand des Projektes am Ende der Vorentwurfsphase).** W. Schröder. *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-027.* 27 p. 24 refs. In German.

The predesign of the Basis ETW with a test cross-section area of 3.2 sq m and a maximum pressure of 4.5 bar was completed in spring 1980. The need for a European transonic wind tunnel for conducting tests at high Reynolds numbers is discussed, taking into account current wind-tunnel developments in Europe and the U.S. The specifications for the ETW are considered. The maximum Reynolds number for the ETW has been raised to a value of 50 million. This was done to enhance the cost effectiveness of testing in the ETW and to reduce development risks. The ETW will, therefore, provide for future European aircraft developments conditions for full-scale testing over a wide flight range. Attention is given to the performance spectrum of the ETW, an evaluation of the predesign, operational aspects of the ETW, the thermal inertia of the model, the pilot wind tunnel, the cryogenic technology program, and the future phases of the ETW program. G.R.

A81-47564 # **Measures for increasing the service life of riveted, aircraft-relevant joints (Massnahmen zur Lebensdauererhöhung flugzeugrelevanter Passnietfügungen).** L. Schwarmann (Vereinigte Flugtechnische Werke GmbH, Bremen, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-052.* 16 p. 10 refs. In German.

Proof of the service life of structural components exposed to dynamic stresses is required in connection with the design of supporting structures for an aircraft. It has been found that the service life of such components is often determined by the ability of the riveted joints to withstand the operational stresses. The reported investigation is, therefore, concerned with approaches which make it possible to increase the service life of the riveted joints. Analytical and experimental investigations regarding the feasibility of two approaches for prolonging the service life of riveted joints are discussed, taking into account studies conducted with a test bar which is representative for aircraft-construction applications. One approach makes use of a press fit for rivet and hole. The second approach involves strain hardening of the rivet hole before driving the rivet. G.R.

A81-47565 # **Recognizing defects in carbon-fiber-reinforced plastics (Erkennbarkeit von Fehlern in CFK-Laminaten).** R. Schütze and W. Hillger (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Strukturmechanik, Braunschweig, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-057.* 20 p. In German.

The damage tolerance of structures made of carbon-fiber-reinforced plastic is tested under various loads. Test laminate (73/1/1, 24/9/1, 1465 A) specimens of thickness 1.5-3.2 mm with various defects were subjected to static and dynamic loads. Special attention was given to delamination, and ultrasonic C-scans were made on the specimens. It was shown that cracks from even small defects can be detected with great accuracy. The same probes were also X-rayed; defects that could not be detected under ordinary X-rays were bored and studied under vacuum by a contrast technique. The nondestructive ultrasonic and X-ray tests were controlled by partially destructive tests, and good agreement was observed between the two. J.F.

A81-47580 # **Employment of development simulation for the realization of direct side force control in the case of an attack aircraft (Einsatz der Entwicklungssimulation bei der Realisierung einer direkten Seitenkraftsteuerung an einem Kampfflugzeug).** U. Nortmann and H. J. Munser (Dornier GmbH, Friedrichshafen, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-063.* 50 p. 21 refs. In German.

Direct side force control (DSFC) has been realized in the case of the Alpha Jet. The program used for the implementation of DSFC is discussed, taking into account the program status before the flight test. Attention is given to the Alpha Jet fixed-seat simulator used as flight simulator, the first simulation investigations for DSFC, employment simulations involving the use of DSFC, development simulations for the determination of the required damping systems (DS), simulations for the determination of specification data for DSFC elements and onboard installations, and simulations with DSFC-DC hardware. The application range of simulation methods for the development of modern attack aircraft is examined. G.R.

A81-47585 # **Instrumentation for measurement of flow properties on a swept wing in flight.** A. Bertelrud (Flygtekniska Forsoksanstalten, Bromma, Sweden). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-034.* 31 p. 16 refs.

Flight tests are performed to measure flow properties on a swept wing to improve methods of extrapolating wind tunnel results, and to obtain data supporting the development of computational methods. The approach to the flight test is described with emphasis on the differences in results obtained during wind tunnel testing of fluid flow properties. Problems in flight testing of aerodynamic flow are considered, including flight conditions, unsteadiness, flexibility, heat flux, and nonrepeatability. Experiments using a swept-wing attack aircraft with a 35 deg sweep of the 25% chord line are conducted, indicating static pressure in the leading edge and wing tip regions. The data acquisition system on the laboratory aircraft is described with data from reference and aerodynamic probes. The system is found to allow correlations to be performed with the flight mechanical and structural aspects of the aircraft, and it is shown how the access to a large computer is essential in such testing. D.L.G.

A81-47587 # **The half-model technique in the wind tunnel and its employment in the development of the Airbus family (Die Halbmodelltechnik im Windkanal und ihre Anwendung bei der Entwicklung der Airbus-Familie).** H. P. Franz (Vereinigte Flugtechnische Werke GmbH, Bremen, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-118.* 38 p. In German.

The half-model technique for conducting measurements in the wind tunnel is particularly suited for the development of large transport aircraft. The technique is especially useful in connection with the determination and the improvement of the aircraft characteristics related to takeoff and landing operations. Expenses for models are reduced and the obtainable Re-numbers are increased by the factor two. Drawback of the considered technique are also discussed, giving attention to the very exacting requirements for obtaining results having absolute accuracy, and the impossibility to study lateral motions. Details of applications of the half-model technique to Airbus family development projects are examined. G.R.

A81-47595 # **The influence of the airspeed on jet turbulence and the consequences for the jet noise (Einfluss der Fluggeschwindigkeit auf die Turbulenz im Triebwerksstrahl und seine Folgen für den Strahllärm).** U. Michel (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Experimentelle Strömungsmechanik, Berlin, West Germany). *Deutsche Gesellschaft für Luft-*

und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-021. 15 p. 10 refs. In German.

The turbulence in a free jet is the cause of jet noise and consequently a study of the effect of airspeed on jet noise must take into consideration the influence of the airspeed on the turbulence. A model for the description of free jet turbulence is discussed, taking into account investigations reported by Ffowcs Williams (1963) and Michalke (1979). According to Michalke, it is assumed that in a coordinate system at rest relative to the nozzle, there is an extension of the axial coherence distance. Michalke's assumption was utilized in the model which was developed to describe the effect of airspeed on free jet turbulence. The validity of the model could be experimentally confirmed on the basis of measurements of the cross-spectral density of the pressure fluctuations in the free jet. An indirect proof of its validity is provided by the agreement of the corresponding experimental values with the data calculated by means of a relation derived on the basis of the model. The agreement, which is very good, shows that there are no other noise sources in addition to the free jet. The absence of noise sources in the interior of the engine leaves no possibility to achieve a further reduction in aircraft-produced noise. G.R.

A81-47601 # **Investigations of vortex formation on wings with cropped leading edges (Untersuchungen über die Wirbelbildung an Flügeln mit geknickten Vorderkanten)**. U. Brennenstuhl and D. Hummel (Braunschweig, Technische Universität, Braunschweig, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-046*. 24 p. In German.

The aerodynamic characteristics of wings with cropped leading edges (double delta wings) are investigated. Measurements are made of the stress distribution and flow. Delta wings are found to produce flow with primary vortex accompanied by secondary separations of flow on each wing half. Streamlines are obtained with a marked secondary separation for wall streamlines on the suction side of the delta wing at an angle of incidence of 20 deg. Flow line development changes very little with inclinations of 20 deg, although a considerable change in flow develops at wing angles of 7.5 deg. At very large angles of incidence the two primary disturbances limit the maximum lift, and are found to originate from the wing tip and the cropping positions in the leading edges. Primary disturbances unite at growing angles of incidence, and produce changes in the stress distribution and aerodynamic parameters in the nonlinear incidence range. The investigation shows good correlation between calculations and measured results, which clarifies and quantifies the effects of turbulence on double delta wings. D.L.G.

A81-47603 # **Damage recognition and localization by means of differential modal analysis (Schadenerkennung und Schadenortung mittels differentieller Modalanalyse)**. O. Bschorr and J. Mittmann (Messerschmitt-Bölkow-Blohm GmbH, Ottobrunn, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-056*. 11 p. 7 refs. In German.

The considered procedure for the recognition of defects is based on the measurement of the resonant frequencies and modes. Such measurements can be conducted for a new aircraft. A defect leading to a weakening in strength produces a displacement in the frequency. The theory of differential modal analysis is derived for the general case of an arbitrary structure, taking into account a partition of the investigated structure into finite elements. The vibrational behavior of this model can be described with the aid of the mass matrix and the stiffness matrix. A one-defect procedure is discussed. The accuracy of the localization procedure is investigated by studying four specimens involving aluminum rods of a length of 500 mm. The obtained results could be experimentally confirmed. G.R.

A81-47604 # **Contribution to the determination of the drag coefficient for air breathing flight vehicles on the basis of wind tunnel measurements (Beitrag zur Ermittlung des Widerstandsbeiwertes luftatmender Flugkoerper aus Windkanalmessungen)**. D. Deppe and W. Schamel (Messerschmitt-Bölkow-Blohm GmbH, Munich, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-036*. 19 p. In German.

The considered procedure for the determination of the drag coefficient is illustrated with the aid of two specific flight vehicle projects, involving a typical subsonic flight vehicle with relatively large aspect ratio and a supersonic flight vehicle, using jet propulsion. The objective was in both cases, to provide a reliable prediction of the total drag value and, in addition, of the drag contributed by the individual flight vehicle components, taking into account body, wings, tail unit, and, in particular, the inlets. The principles of model drag evaluation are considered and an evaluation scheme is provided for each of the two flight vehicle projects. Evaluation results obtained for the supersonic flight vehicle are presented, taking into account a standard evaluation and alternative approaches. Attention is also given to the procedures which can be employed to derive the desired data for the flight vehicle itself on the basis of the results obtained with a small-scale model. G.R.

A81-47609 # **Application of reduced natural longitudinal stability in the Airbus program (Anwendung reduzierter natürlicher Längsstabilität im Airbusprogramm)**. U. Graeber and B. Fischer (Messerschmitt-Bölkow-Blohm GmbH, Hamburg, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-062*. 18 p. In German.

Advantages of the reduced longitudinal stability for an aircraft are related to drag reduction and performance improvements. The most significant advantage in the case of an airliner is a saving in fuel. The reported investigation shows that the realization of reduced natural longitudinal stability in the case of an aircraft of the type of the Airbus is possible by introducing a tail-unit trimming-tank system. The utilization of such a system makes it possible to affect the location of the center of gravity. The advantages and the limitations of this approach are discussed. The approach is suited for an optimal adaptation of the position of the center of gravity to the requirements of the phase of flight. G.R.

A81-47612 # **Onboard procedure for the measurement of wind shear gradients (Bordgebundenes Verfahren zur Messung von Scherwindgradienten)**. G. Neuwerth and R. Hartel (Aachen, Rheinisch-Westfälische Technische Hochschule, Aachen, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-060*. 18 p. 7 refs. In German.

The occurrence of wind shears constitutes a considerable risk for an aircraft, particularly during the takeoff and landing phases. The risk factors for the aircraft are connected with changes in lift and disturbances regarding the moments relations. A description is presented of a simple measurement procedure for the determination of the wind shear gradient. The considered onboard procedure can be employed for objectives of flight control and for meteorological measurements. The procedure is based on the measurement of the difference of dynamic pressures at two points of the aircraft. Two pitot tubes with a certain vertical distance from each other are connected by means of a flexible rubber tube. The described procedure was tested with the aid of an aircraft. The measured data showed good agreement with values obtained by means of a measurement device located on the ground. G.R.

A81-47616 # **A fail-operational duplex sensor concept for flight control systems on the basis of analytical redundancy (Ein fail-op Duplex-Sensorkonzept für Flugregelsysteme auf der Grundlage analytischer Redundanz)**. N. Stuckenberg (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugführung, Braunschweig, West Germany). *Deutsche Gesellschaft für Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-066*. 22 p. 7 refs. In German.

Based on a reliability concept of analytical redundancy, the fail-operational characteristics of a conventional triplex sensor configuration are determined by means of a duplex sensor configuration. Signals of instrument malfunction are generated by deterministic Luenberger observers. The operational efficiency of the reliability concept is determined as a function of the signal character of the instrument malfunction. As an example, the procedure is applied to the autopilot control system for the yawing motion of a HFB 320 commercial aircraft. The usefulness of this concept for a system of closed-loop design is shown to be questionable. Since no assumptions about the failure of the sensors or the signal character of an instrument malfunction can realistically be made, only those malfunctions which had a slight effect on the recognition algorithm and simultaneously a comparatively great effect on the controlled system could be given. The theory of optimal control shows that a deterministic optimal failure signal exists for every system configuration of every sensor. The performance of the concept is then determined by this signal pattern. J.F.

A81-47620 # **Ten years activity in the area of flight control for helicopters at night and in bad weather (Zehn Jahre Aktivität auf dem Gebiet der Flugführung von Hubschraubern bei Nacht und Schlechtwetter).** E. Kohnen (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Institut für Flugführung, Braunschweig, West Germany). *Deutsche Gesellschaft fur Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-064.* 24 p. 5 refs. In German.

Various flight control systems were studied, taking into account simulated and real flight conditions. The subjects investigated are related to aspects of pilot acceptance, obtainable flight control performance, the pilot work load, and the performance provided by various sensors. The employment of visibility aids for the pilot is considered. Systems supplying such aids can enlarge the range of helicopter employment by providing the pilot, in case of insufficient natural visibility, with the possibilities for a flight under quasi-visibility conditions. The effect of a utilization of the novel systems on flight control performance and pilot work load was studied. Attention was given to the design of features of instrument and sensor indication display which are favorable from the viewpoint of human engineering. G.R.

A81-47621 # **Computational fluid mechanics and its impact on the aircraft aerodynamicist.** B. Hunt (British Aerospace Public, Ltd., Co., Aircraft Group, Preston, Lancs., England). *Deutsche Gesellschaft fur Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-003.* 45 p.

The capabilities of modern computer-based theoretical methods for predicting the basic types of aerodynamic flow are examined. It is shown that although the methods of computational fluid mechanics can never totally supplant all of the more traditional designer tools, they can offer substantial improvements in the design process, in the quality of the final product, and in the development time and costs. It is also noted that if the capabilities of modern computers are to be realized in the form of user-oriented programs, then careful consideration must be given to the environment for which these programs are to be developed. V.L.

A81-47622 # **Vortex bursting on slender delta wings in transonic flow and its influence on missile aerodynamic characteristics.** J. M. Muylaert (Dornier GmbH, Friedrichshafen, West Germany). *Deutsche Gesellschaft fur Luft- und Raumfahrt, Jahrestagung, Aachen, West Germany, May 11-14, 1981, Paper 81-047.* 35 p. 29 refs. Research supported by the Bundesministerium der Verteidigung.

The influence of compressibility effects on vortex breakdown is investigated for the case of sharp-edged delta wings. Normal force and pitching moment measurements were made at Mach numbers of 0.60-0.85 for delta wing aspect ratios of 1.26, 1.6 and 2.0, with incidence angles varying between near-zero to well above the critical angle at which lee-side vortex breakdown was observed. Detailed study of the lee-side pressure distribution of a wing with an aspect ratio of 2.0 showed that, at the critical angle, the vortex bursting point suddenly jumps from behind the trailing edge to the 50% chord position, giving rise to loss of lift and nose down pitching moment. Schlieren photography and sublimation tests confirm these conclusions, which are visualized by means of water tunnel tests. Attention is given the effect of these phenomena on delta-winged missiles. O.C.

A81-47725 # **Prediction of range and endurance of jet aircraft at constant altitude.** C. W. Bert (Oklahoma, University, Norman, OK). *Journal of Aircraft,* vol. 18, Oct. 1981, p. 890-892. 15 refs.

Jonas (1947) has reported an analysis of range for turbojet-powered aircraft. Ashkenas (1948) has obtained an expression for a jet-aircraft range at altitudes below 35,000 ft and a logarithmic form for the constant-temperature stratosphere. In the current study, it is shown that neither the square-root expression derived by Jonas nor the logarithmic form are appropriate for constant-altitude cruise. The presented analysis removes two deficiencies in the earlier investigations and obtains a simple, closed-form expression which is more appropriate for constant-altitude cruise than either of the standard expressions of Jonas and Ashkenas. The closed-form equation is applied to an example problem. G.R.

A81-47785 **High peak energy shaped-pulse electromagnetic crack detection.** I. G. Hendrickson and K. A. Hansen (Boeing Co., Seattle, WA). In: Eddy-current characterization of materials and structures; Proceedings of the Symposium, Gaithersburg, MD, September 5-7, 1979. Philadelphia, PA, American Society for Testing and Materials, 1981, p. 129-139.

A high peak energy, shaped-pulse, eddy current (SPEC) technique has been developed and investigated with the objective of improving crack detection of thick multiple-layer aircraft structures. The SPEC concept is reviewed, and it involves applying the high current level slow rise time or low-frequency portion of the shaped pulse to obtain the required depth-of-field penetration into the structure. The basic SPEC instrument is described: It is comprised of (1) a pulsar unit to produce the shaped current pulse, (2) a transmit or drive coil to generate the electromagnetic field to be injected into and collapsed out of the structure to be tested, and (3) a receive or pickup coil to detect the produced eddy currents/magnetic fields collapsing from within the structure and modified by cracks in the structure. Investigations include tests of variables, including base-metal conductivity, fastener variability, edge margin, interface gap, fastener height/countersink depth, upper-layer thickness, and probe lift-off. It is shown that crack-inspection capabilities of second-layer structures with 0.635 to 1.27-cm-thick upper layer skin have been improved significantly with the SPEC inspection system. K.S.

A81-47801 **Test methods and design allowables for fibrous composites; Proceedings of the Symposium, Dearborn, MI, October 2, 3, 1979.** Symposium sponsored by the American Society for Testing and Materials. Edited by C. C. Chamis (NASA, Lewis Research Center, Cleveland, OH). Philadelphia, PA, American Society for Testing and Materials (ASTM Special Technical Publication, No. 734), 1981. 442 p. $44.

Papers are presented on special test methods for fibrous composites for quantifying design material properties. Studies are divided into four major areas: (1) new and special test methods, including those for transverse tensile strength, shear modulus, longitudinal compression, and impact resistance; (2) special test methods and analysis, including off-axes and angle-plied tension and compression, fracture and fatigue, and biaxial stress states; (3) design allowables, describing procedures for setting and selecting design allowables in general, and also for composite aircraft structures, graphite/polyimide bolted joints, cost-effective mechanical property characterization, statistical considerations, intraply hybrids, and compression and fatigue; (4) design allowables for special applications, describing procedures for buckling of cylindrical components, proof load of pressure vessels, strength of composite joints, and environmental effects and creep. The papers provide considerable information for test methods and for composite analysis of these methods, as well as tests and procedures for establishing design allowables. K.S.

A81-47811 **Developing design allowables for composite helicopter structures.** M. J. Rich and D. P. Maass (United Technologies Corp., Sikorsky Aircraft Div., Stratford, CT). In: Test methods and design allowables for fibrous composites; Proceedings of the Symposium, Dearborn, MI, October 2, 3, 1979. Philadelphia, PA, American Society for Testing and Materials, 1981, p. 181-194. 13 refs.

A procedure is presented for developing static and fatigue design allowables for advanced composite materials used in aircraft structures. The allowables are established at the material lamina level accounting for environmental conditions such as moisture and elevated temperatures. Kevlar/epoxy and graphite/epoxy specimens are tested, and static and fatigue strength and the elastic constants are obtained for basic laminate orientations of a woven fabric and a unidirectional tape. Static test results are presented as a percentage of mean room temperature dry strength. It is shown that the environmental effects are more pronounced for the matrix modes than for the fiber modes of the fracture, and that Kevlar/epoxy is more sensitive to the environmental design conditions than graphite/epoxy. A constant-life diagram, representing fatigue test results as a percentage of room temperature wet static tensile strength, shows that the tension-compression and compression-compression range may be the major aspect of fatigue design. It is also shown that the use of small sample sizes using a simple normal distribution seems to be sufficiently accurate to establish static design allowables. K.S.

A81-47813 **Cost-effective mechanical property characterization.** J. A. Suarez (Grumman Aerospace Corp., Structural Mechanics Section, Bethpage, NY). In: Test methods and design allowables for fibrous composites; Proceedings of the Symposium, Dearborn, MI, October 2, 3, 1979. Philadelphia, PA, American Society for Testing and Materials, 1981, p. 208-228. Contract No. F33615-78-C-5234.

Current cost-effective mechanical property characterization methods are described for advanced composites in automotive and stiffness-critical aircraft secondary structures, using coupon-type specimens tailored to the special application at hand. The automotive application involves the testing of a roof spider and gullwing doors of a brushed stainless steel and reinforced-plastic sports car, while the aerospace application involves the establishment of material and process specifications, selection of a long-term moisture-absorption criterion, and coupon static tests to establish design values with environmental and vacuum-pressure-cure knockdown factors. Data presented include those for test tensile strength and modulus for vacuum-pressure cured graphite/epoxy laminates of various fiber orientations. The design values, given as ratios of dry strength at temperature of autoclave-cured laminates, are established and used in the design of a trailing-edge component. Among the conclusions presented are that abbreviated coupon testing for static design values for secondary structures can be applied to expand utilization of composite structures and rapid processing of composites for high production rates or minimum manufacturing costs can result in a reduction of compression strength. K.S.

A81-47842 **Hyperbolic origins.** C. Powell. *Journal of Navigation,* vol. 34, Sept. 1981, p. 424-436. 26 refs.

An historical account is given of antecedents of modern radio position-fixing systems whose position lines are of hyperbolic form. Consideration is given (1) synchronized sound signals, by which simultaneous transmissions from different points made possible the derivation of a position line by the differential timing of signal reception; (2) sound ranging, in which the position of enemy guns was determined through a comparison of the times at which its report reached a number of listening posts; (3) radio-acoustic trials, in which the acoustic element consisted of sea-bottom hydrophones near shore; (4) comparison of radio signal strength, by which a chain of transmitting stations would enable receiving ships to find their position; (5) ranging and position fixing, where two pairs of receiving stations in a crossed-baseline layout fixed the position of a transmitter-carrying ship; (6) Doppler-effect radio systems; (7) hyperbolic position-fixing for mobile receivers; (8) free-running transmissions; (9) frequency-modulation, for the resolution of hyperbolic pattern ambiguity; and finally (10) the GEE, LORAN and QM systems. O.C.

A81-47843 **The relation between aircraft fuel reserves and navigation.** V. W. Attwooll (Civil Aviation Authority, London, England). *(Royal Institute of Navigation, Meeting, London, England, Jan. 21, 1981.) Journal of Navigation,* vol. 34, Sept. 1981, p. 437-449; Discussion, p. 450, 451.

A rational basis is presented for the determination of fuel uplift quantities in commercial operations, in relation to safety and regularity of services. Numerical models are devised as aids in estimating such factors as the regularity of service to be expected from a given fuel quantity uplifted at take-off, assuming that in-flight decisions about fuel usage are made in a rigid, automatic way. Navigation figures as an important element because all in-flight decisions demand exact knowledge of aircraft position. Attention is given the possible effects on fuel uplift policies of various changes and developments in aircraft equipment and air traffic control (ATC) systems; for instance: (1) the use of blind landing equipment of high reliability can influence a pilot's decision to continue holding or divert to an alternative landing site; and (2) airborne flight management systems are being developed to help the pilot implement fuel conservation through automatic estimates of the best speed and altitude to fly under given conditions, reducing fuel consumption by an estimated 1.6%. O.C.

A81-47844 **A simple radar for navigation accuracy measurements.** S. Nagaoka, E. Yoshioka, and P. T. Muto. *Journal of Navigation,* vol. 34, Sept. 1981, p. 462-469. 6 refs.

In order to survey height-keeping errors, a simple, height-finding radar, or Navigation Accuracy Measurement System (NAMS), has been developed. The radar, which is based on a curve-fitting method, consists of an antenna with fan-beam radiation pattern, a transceiver, a digitizer and a mini-computer; with the antenna rotating about a horizontal axis and scanning aircraft flying overhead. The height of detected aircraft is estimated by processing the data obtained over several scans. The height-measurement accuracy of NAMS depends upon the method of signal processing, the number of radar plots (depending on flight conditions), and the accuracy of input data. Results of a computer simulation of the system for the case of turbojet aircraft flying at altitudes of 30-40,000 feet are presented, in terms of lateral deviation in nm and estimated height measurement error. O.C.

A81-47888 **A practical probabilistic method for evaluating the fail-safeness of structures that may fail due to fatigue.** J. R. Gebman (Rand Corp., Engineering and Applied Sciences Dept., Santa Monica, CA) and P. C. Paris (Washington University, St. Louis, MO). In: Fatigue crack growth measurement and data analysis; Proceedings of the Symposium, Pittsburgh, PA, October 29, 30, 1979. Philadelphia, PA, American Society for Testing and Materials, 1981, p. 271-280. 9 refs.

The undetected propagation of a fatigue crack constitutes a significant cause of aircraft and other structural failures. To raise the structural failure load to a relatively high level, the manufacturer can divide the structure into many small elements, which significantly increases the ability of a structure to tolerate an element failure. This paper presents a procedure for calculating the probability that the structure has not failed, as the function of the crack propagation history for an undetected fatigue crack. The form of the procedure is so simple that computations with a desk calculator can yield reasonably accurate results. Moreover, the necessary input data are often readily available. By adopting such a procedure, aircraft manufacturers and operators can better identify those elements that pose the greatest threat to structural integrity. (Author)

A81-47957 # **Damping of turbomachine blade variations by subsonic flow.** G. S. Pisarenko, A. A. Kaminer, V. A. Balalaev, N. Ia. Nastenko, A. L. Stel'makh, and A. V. Dunaev. In: Aeroelasticity in turbomachines; Proceedings of the Second International Symposium, Lausanne, Switzerland, September 8-12, 1980. Zurich, Juris-Verlag, 1981, p. 151-161.

Experimental results are presented concerning aerodynamic damping for compressor blades in nonuniform subsonic flow with vortex wakes. The effects of stator and rotor spacing, maximum additional velocity in the wake, the orientation of the wake in relation to the profile chord, the regime parameters of the flow, and the geometrical parameters of the cascade were investigated. Results show that the nonuniformity of the flow which occurs in turbomachines has no influence on the aerodynamic damping. B.J.

A81-47959 # **Stability and flutter analysis of turbine blades at low speed.** T. J. Akai and H. Atassi (Notre Dame, University, Notre Dame, IN). In: Aeroelasticity in turbomachines; Proceedings of the Second International Symposium, Lausanne, Switzerland, September 8-12, 1980. Zurich, Juris-Verlag, 1981, p. 187-201. 9 refs. Contract No. F49620-76-C-0014.

An aeroelastic analysis for highly loaded turbine blades at low speed is carried out for various vibratory modes. These include pure bending and torsion as well as coupled oscillatory modes. The analysis is based on a complete aerodynamic theory which fully accounts for the blade geometry, flow conditions and cascade parameters. A damping coefficient simulating structural damping is also included. The results clearly show that classical flutter can occur for low speed turbine cascades at typical operating conditions. This is directly attributable to high blade loading and thickness. (Author)

A81-47961 # **Numerical experiments on unsteady flows through vibrating cascades.** M. Pandolfi. In: Aeroelasticity in turbomachines; Proceedings of the Second International Symposium, Lausanne, Switzerland, September 8-12, 1980. Zurich, Juris-Verlag, 1981, p. 211-228. 8 refs.

A numerical approach is presented for computing the inviscid compressible 2D unsteady flow in a vibrating cascade. The full Euler Equations are considered and no restrictive assumptions are required about geometry of the blading. The analysis is here confined to subsonic flows. The description of the modeling of the boundaries and the numerical methodology is given. Particular attention is paid to the explicit treatment of the wake behind the blade during the unsteady flow. Checks on the accuracy of the computations are done and comments are given on few numerical examples. (Author)

A81-47962 # **Computer-aided investigation of turbomachine aerodynamics and aeroelasticity.** S. M. Belotserkovskii, A. S. Vol'mir, V. V. Kuleshov, M. I. Nisht, G. U. Stepanov, and R. M. Fedorov. In: Aeroelasticity in turbomachines; Proceedings of the Second International Symposium, Lausanne, Switzerland, September 8-12, 1980. Zurich, Juris-Verlag, 1981, p. 229-249. 31 refs.

The paper examines aspects of the computer-aided solution of aeroelasticity problems in turbomachines by the synthesis of numerical methods of unsteady aerodynamics and elasticity. In particular, it is shown that in solving nonlinear aeroelasticity problems it is necessary to perform the step integration of nonlinear equations of aerodynamics and aeroelasticity. Aerodynamic loads and deformations for each step can be corrected by an iteration method. B.J.

A81-47963 # **On the numerical analysis of stall flutter in turbine cascade.** S. Takahara (Mitsubishi Heavy Industries, Ltd., Nagasaki, Japan), T. Adachi, and Y. Kadoya. In: Aeroelasticity in turbomachines; Proceedings of the Second International Symposium, Lausanne, Switzerland, September 8-12, 1980. Zurich, Juris-Verlag, 1981, p. 251-262. 7 refs.

The modified FLIC method using the triangular finite element mesh pattern was employed to solve the problem of unsteady stalled flow through a turbine cascade; the calculation was performed for the vibration of grouped blades without taking into account the interblade phase angle of vibration. Numerical results for low-pressure end blades of a steam turbine were compared with flutter test data on aerodynamic damping, and satisfactory agreement was obtained. It is concluded that this method is suitable for the prediction of the stall flutter characteristics of blade profiles. B.J.

A81-47966 # **Stability analysis of the twin mode model of coupled flexion-torsion vibrations in aeroengine fans.** R. A. J. Ford (New South Wales, University, Kensington, Australia). In: Aeroelasticity in turbomachines; Proceedings of the Second International Symposium, Lausanne, Switzerland, September 8-12, 1980. Zurich, Juris-Verlag, 1981, p. 297-308.

The twin mode representation of coupled flexion-torsion vibrations in aeroengine fans is essentially a linear feedback system in which flutter is represented by system instability. In earlier papers the model was analysed from direct physical considerations; in this paper the analysis is extended, amplified and unified by applying classical automatic control theory to the twin mode model. The results generally confirm the basic conclusions of the earlier analysis although they have also identified and clarified a number of detail misconceptions which had arisen in the previous work. (Author)

A81-47993 **Damping applications for vibration control; Proceedings of the Winter Annual Meeting, Chicago, IL, November 16-21, 1980.** Meeting sponsored by the American Society of Mechanical Engineers. Edited by P. J. Torvik (USAF, Institute of Technology, Wright-Patterson AFB, OH). New York, American Society of Mechanical Engineers (Applied Mechanics Symposia Series. AMD Volume 38), 1980. 163 p. $24.

Papers are presented on viscoelastic materials for damping applications, friction damping, damping applications in aeropropulsion systems, and the treatment of damping in transient computations. Attention is also given to the damping capacity of fiber reinforced composites, to the damping of panels due to ambient air, and to the application of damping for noise control in diesel engine components. C.R.

A81-47999 # **Damping applications in aero-propulsion systems.** J. P. Henderson (USAF, Materials Laboratory, Wright-Patterson AFB, OH). In: Damping applications for vibration control; Proceedings of the Winter Annual Meeting, Chicago, IL, November 16-21, 1980. New York, American Society of Mechanical Engineers, 1980, p. 145-158. 21 refs. AF Project 2418.

Several applications of vibration damping technology to high cycle fatigue problems in jet engine components are discussed. It is shown that constrained layer damping treatments, using polymeric materials, have provided cost effective solutions to many difficult high maintenance cost situations. On the other hand, engine experience with vitreous enamel coatings for the damping of hot engine components, although very promising, has pointed the need for further material development for increased durability. (Author)

A81-48003 **Digital simulation for energy conservation in a large wind tunnel plant system.** F. L. Shope (ARO, Inc., Arnold Engineering Development Center, Arnold Air Force Station, TN). In: Annual Simulation Symposium, 13th, Tampa, FL, March 19-21, 1980, Record of Proceedings. Tampa, FL, Annual Simulation Symposium, 1980, p. 73-86. 12 refs.

This paper documents a feasibility study of mathematically modeling the wind tunnel complex and associated plant in the von Karman Gas Dynamics Facility at the Air Force's Arnold Engineering Development Center in Tennessee. The ultimate goal of the modeling effort is to effect energy conservation measures by modifying operational procedures and plant hardware. A general theory is proposed to model the aerodynamics and losses of each plant or tunnel component in terms of a set of 33 equations based on one-dimensional, unsteady, nonisentropic flow and admitting arbitrary interconnections between components. A computer program is currently under development to apply the theoretical model using the IBM Continuous System Modeling Program III. In conjunction with the modeling effort, an assessment was made of the existing experimental data base which could be used to drive the mathematical model. Requirements for experimental data are discussed in general terms. (Author)

A81-48009 **Simulation model to evaluate maintenance strategies for large network of fielded systems.** G. A. Wong (Mitre Corp., McLean, VA). In: Annual Simulation Symposium, 13th, Tampa, FL, March 19-21, 1980, Record of Proceedings. Tampa, FL, Annual Simulation Symposium, 1980, p. 311-326. U.S. Department of Transportation Contract No. FA80WA-4370.

A dynamic simulation model of a field maintenance organization has been developed and validated. The objective of the model is to provide an analytical tool for evaluating the operational feasibility of new maintenance strategies prior to their introduction into the field. This simulation model is an accurate replica of the policies and time critical maintenance activities within a field organization, providing a rendering in detail of each technician and each facility as events take place in time. This paper discusses the structure of the model, the functions simulated, the validation experiment, and an application of the model. (Author)

A81-48062 # **New developments in compact plate-fin heat exchangers.** K. O. Parker and M. G. Coombs (AiResearch Manufacturing Company of California, Torrance, CA). In: Compact heat exchangers - History, technological advancement and mechanical design problems; Proceedings of the Twenty-fourth Annual International Gas Turbine Conference and First Solar Energy Conference, San Diego, CA, March 11-15, 1979. Conferences sponsored by the American Society of Mechanical Engineers. New York, American Society of Mechanical Engineers (Heat Transfer Symposia Series. HTD Volume 10), 1980, p. 171-179.

The extension of compact plate-fin heat exchanger capabilities in order to accommodate the performance requirements of regeneratively cooled hypersonic ramjet engines, laser weapons, aircraft engine infrared suppressors, and large high-efficiency gas turbine cycles is described. Attention is given to cooling fluid flow path geometry and heat exchanger fabrication techniques, such novel materials as alumina and silicon carbide, and space and weight constraints imposed on designs by airborne application. It is shown that operating temperatures, pressures and area densities have been significantly increased. O.C.

A81-48064 **Fly-by-wire Jaguar.** G. Warwick. *Flight International,* vol. 120, Sept. 12, 1981, p. 816-818.

A status report is given for the fly-by-wire Jaguar fighter test bed, which is equipped with a full-time, quadruplex digital flight control system offering a theoretical mean time between catastrophic failures of 250 million hours. General consideration is given the advantages of fly-by-wire and electronic flight control systems (such as relaxed stability and stability simulation, respectively), and parallel developments for the Mirage 2000 and MBB F-104 and Advanced Fighter Technology Integration F-16 research aircraft are cited. Attention is given to the digital management of pilot maneuver demand inputs by the flight computer, the integration of sensor signals, fail-safe reliability of all system elements, pre-flight testing of input tolerances, and software development. Future avenues for design development of such systems and their application to advanced fighters are also discussed. O.C.

A81-48067 **F-100s set to become target drones.** D. M. North. *Aviation Week and Space Technology,* vol. 115, Sept. 28, 1981, p. 69-71.

The Military Aircraft Storage and Disposition Center has undertaken the conversion of about 300 stored F-100s into QF-100 target drones. An account is given of the techniques by which retired military aircraft are conditioned for storage, so that hydraulic, fuel, electrical and electronic systems may be rapidly brought to operating condition and all structures are protected from fatigue and corrosion. It is noted that the facility's location at Tucson, AZ, affords it the low rainfall, 10-20% humidity, and alkaline soil needed to minimize deterioration. Other aircraft in storage, such as A-4s that have been sold to Malaysia for active manned service, are also stored for eventual refurbishment by private companies. Other aircraft similarly processed have been F-102s, A-7s and F-8s. O.C.

A81-48079 **Droplet breakup regimes and criteria for their existence.** A. A. Borisov, B. E. Gel'fand, M. S. Natanzon, and O. M. Kossov (Akademiia Nauk SSSR, Institut Khimicheskoi Fiziki, Moscow, USSR). *(Inzhenerno-Fizicheskii Zhurnal,* vol. 40, Jan. 1981, p. 64-70.) *Journal of Engineering Physics,* vol. 40, no. 1, July 1981, p 44-49. 31 refs. Translation.

Experimental and theoretical work on droplet breakup by a gas flow in shock tubes and nozzles is reviewed. By analyzing experimental results, three droplet breakup regimes are identified: (1) droplet breakup of the parachute type, (2) droplet breakup with tearing off of the surface layer, and (3) explosive breakup of droplets. Conditions for the favored development of one or the other droplet breakup regimes are briefly discussed. V.L.

A81-48097 # **Calculation of natural vibrations for thin-walled irregular reinforced shells of the helicopter fuselage type using the finite-element work method (Raschet na sobstvennye kolebaniia tonkostennykh nereguliarnykh podkreplennykh obolochek tipa fiuzeliazha vertoleta konechno-elementnym metodom sil).** F. F. Baiazitov and Z. I. Burman. *Akademiia Nauk SSSR, Izvestiia, Mekhanika Tverdogo Tela,* July-Aug. 1981, p. 149-159. 12 refs. In Russian.

An equation describing the natural vibrations of a fuselage is obtained in terms of the work method using a three-dimensional Green's function, and a transformation leading to an equation based on the method of displacements is given. A method is proposed for reducing the order of the dynamic matrix. It is shown that the natural frequencies obtained using a reduced-order matrix are in good agreement with frequencies obtained with a higher-order dynamic matrix. V.L.

A81-48120 **The role of the earth's shape in navigation - An example.** W. Kuebler and S. Sommers (Hydrotronics, Inc., McLean, VA). *Navigation,* vol. 28, Spring 1981, p. 29-33. 7 refs.

The accuracy of navigational fixes obtainable with present day navigation systems is such that the earth's geodesy must be considered, especially in comparing relative fixes. Approximations to the exact transformations between geodetic and geocentric coordinates can be made so as to optimize computer times. This paper presents the results of a systematic error analysis of these approximations to the exact coordinate transformations and the resulting real-time and core requirements on an AN/UYK-20 standard Navy mini-computer. (Author)

A81-48121 **An analytical solution of the two star sight problem of celestial navigation.** J. A. Van Allen. *Navigation,* vol. 28, Spring 1981, p. 40-43. Navy-supported research.

The classical problem of celestial navigation, in its simplest form, is the determination of an observer's longitude and latitude from the altitudes of two identified stars, observed at a known Greenwich Mean Time on a known date. A novel solution of this problem in closed analytical form is given herein. The solution yields the two possible positions of the observer without any prior knowledge of his position, without any dependence on tables of computed altitudes and azimuths for an assumed position, and without any graphical work. The basic two-fold ambiguity is resolved to yield a single, unique position by repeating the calculation using the altitudes of a third star and of one of the two previous stars. The full analytical solution is given as are some artificial numerical examples, readily performed on a hand-held, programmable calculator. (Author)

A81-48142 **Sliding-seal electron beam slot welding of an aircraft wing closure beam.** R. W. Messler, Jr. (Eutectic Corp., Flushing, NY). *Welding Journal,* vol. 60, Sept. 1981, p. 31-39.

A technique was developed for eliminating the seal wear associated with sliding-seal electron beam (EB) welding. This method, referred to as slot welding, involves the use of a cover plate that seals statically to the sliding seal welding head; the cover plate is sealed with an O-ring to a slotted chamber cover plate. By welding through the hole-and-slot arrangement between the sealing plate and a small movable vacuum chamber, the inherent advantages of EB welding can be combined with the rapid pump-down, low capital equipment cost, and the portability of the technique. Five tapered channel Ti-6Al-6V-2Sn wing closure beams for the F-14A were sliding-seal EB welded to demonstrate the system. The first four beams were welded using a partial penetration locking pass, followed by a full penetration locking pass at 30 kV/50 mA, 6.20 A, and 30 ipm; the fifth beam was welded without the partial penetration locking pass. The resulting welds were all uniform and fairly clean, but porosity was reduced in the fifth beam by elimination of the locking pass. The tensile, fracture toughness, and fatigue properties of the welded specimens were compared to those of the base metal and showed good results. J.F.

A81-48196 # **Analysis of the operation of air turborefrigeration plants and their use for on-the-ground air-conditioning of aircraft (Analiz rabochego protsessa vozdushnykh turbokholodil'nykh ustanovok /VTKhU/ i ikh primenenie dlia nazemnogo konditsionirovaniia vozdukha na samoletakh).** E. Pasztor (Budapesti Muszaki Egyetem, Budapest, Hungary). *Periodica Polytechnica, Transportation Engineering,* vol. 9, no. 1, 1981, p. 37-47. 7 refs. In Russian.

The theory and operation of turborefrigeration plants which use air as refrigerant are examined. Consideration is given to the effects of losses in the various turborefrigerator components on the specific cooling power. It is shown that there exists an optimum value of the specific cooling power which depends on the pressure ratio. Applications of turborefrigerators are discussed with particular reference to on-the-ground air-conditioning of aircraft. V.L.

A81-48328 **The array processor - A real-time simulator.** M. E. Sturgeon (Floating Point Systems, Inc., Beaverton, OR). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 12-14.

The technique of parallel processing with an array processor is described; overviews are presented of architecture, functional components, software, and simulation applications (sea state simulation, aircraft simulation, and road simulation). The architecture features parallelism and pipelining in both the hardware and software. The floating-point arithmetic hardware provides fast high-precision calculations. The input/output interfaces provide access to the outside world via a variety of peripheral devices. A general-purpose computer with a host with a parallel processor offers an attractive alternative to the large mainframe or wholly analog system. B.J.

A81-48329 **Function generation techniques.** H. R. Justice (Computer Sciences Corp., Defense Systems Div., Huntsville, AL). In: Summer Computer Simulation Conference, Seattle, WA, August

25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 15, 16.

Available methods of function generation in real-time hybrid simulations are reviewed. A particular technique that was used on a real-time hybrid simulation of a Simplified Inertial Guidance-Demonstration (SIG-D) in the Advanced Simulation Center at Redstone, Alabama is presented in detail. It is shown that the Multi-Variable Function Generator (MVFG) developed by Electronic Associates provides an attractive alternative to the other available methods of function generation in a hybrid simulation. Because of the large bandwidth of the MVFG, multiplexing techniques can be used to expand the number of functions obtainable from the available MVFG units. The multiplexing scheme presented herein provides a reliable method of expanding the function generation capacity in any hybrid facility that contains function generators with similar characteristics to the MVFG. B.J.

A81-48333 **A technique for the implementation of nonlinear models as real-time digital simulations.** P. McLaughlin (United Technologies Corp., Pratt and Whitney Aircraft Group, East Hartford, CT). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 111-115. 12 refs.

This paper presents a technique that can be utilized to perform real-time simulation tasks using digital computers. For certain types of nonlinear models, the computational stability of simulations employing this technique will be more attractive than that obtained from alternative approaches. This, in turn, allows the use of more complex models or, conversely, less expensive computers in these tasks. The technique is based on an implicit method used at the Pratt and Whitney Aircraft Group to simulate the steady-state and transient operation of turbine engines and their components. The manner in which the technique is implemented for a general nonlinear model is described. The stability and accuracy of the technique is compared to other methods used for real-time simulation. A discussion of modifications appropriate to programs employing integer arithmetic is included. (Author)

A81-48351 **Numerical simulation of hydrodynamic ram.** K. D. Kimsey (U.S. Army, Ballistics Research Laboratory, Aberdeen Proving Ground, MD). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 299-301. 8 refs.

The paper presents the results of a numerical simulation of a kinetic energy projectile with an L/D ratio of 3 impacting at normal obliquity a fuel cell simulator. The simulation has been performed using the two-dimensional EPIC-2 (Elastic-Plastic Impact Computation in 2 Dimensions) code. The technique is based on a Lagrangian formulation where the equations of motion are integrated directly, rather than through the traditional stiffness matrix approach. The analysis has confirmed that the entrance panel petaling results from the fluid impulsively accelerating the entrance panel. The hydrostatic pressures generated in the fluid initiate bulging of the exit panel prior to perforation by the penetrator. V.L.

A81-48358 **The evolution of real-time digital simulation of aircraft for training applications.** G. V. Amico and C. E. Lindahl (U.S. Navy, Naval Training Equipment Center, Orlando, FL). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 365-370. 15 refs.

The evolution of real-time digital simulation for flight trainers is reviewed with emphasis on computer system architecture, iteration rates, and programming. With respect to computer architecture, the trend has been one of going from expensive CPU's to the present system architecture of inexpensive and powerful distributed processors based on a functional allocation to the subsystems involved in the flight trainers. Iteration rates are expected to be influenced by on-board computers whose iteration rates may exceed the current 30 Hz standard. Progress is also expected in the use of FORTRAN as more efficient compilers are developed by computer manufacturers for real-time simulation. V.L.

A81-48359 **Probe protection in camera/model visual systems.** P. J. Bellocchio and R. B. Mallinson (Singer Co., Link Flight Simulation Div., Binghamton, NY). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 371-374. Contract No. N61339-76-C-0086.

A system has been developed for protecting the optical probe from collision with the modelboard during low altitude flight simulation in helicopter training simulators. The system uses a solid state infrared laser as a probe height sensor and an auxiliary impact sensor for additional protection around the probe tip. The probe protection software makes use of the probe height sensor output to make a decision as to whether a crash is imminent, and if necessary, issues a command for an emergency retraction of the probe. V.L.

A81-48368 **Simulation of Microwave Landing System.** J. K. Hsiao (U.S. Navy, Naval Research Laboratory, Washington, DC). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 542-546.

The FAA Microwave Landing System (MLS) uses a Time Reference Scanning Beam configuration. The ground installation uses two linear electronically scanned antenna arrays, scanning in azimuth and elevation directions. Radiating signals from the arrays in the 'TO' and 'FRO' directions received by a landing aircraft can be used to determine accurately the aircraft's angular position in both azimuth and elevation. The accuracy of the angle measurement depends on the beam steering algorithm, array component tolerances, multipath effects, failures in the array, and other associated problems. A computer simulation has been developed which represents the performance of the various phased array antenna systems which are being considered for use in the Microwave Landing System. The purpose of this simulation is to assess the angular accuracy of MLS in terms of its design parameters, tolerance effects, component and subsystem failures, multipath, and angle detection algorithm. The entire angle-measurement process used in MLS is modeled, including the phased array antenna, the beam steering algorithm, multipath propagation, and the airborne receiver and angle processor. (Author)

A81-48369 * **Time delays in flight simulator visual displays.** D. F. Crane (NASA, Ames Research Center, Moffett Field, CA). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 552-557. 13 refs.

It is pointed out that the effects of delays of less than 100 msec in visual displays on pilot dynamic response and system performance are of particular interest at this time because improvements in the latest computer-generated imagery (CGI) systems are expected to reduce CGI displays delays to this range. Attention is given to data which quantify the effects of display delays in the range of 0-100 msec on system stability and performance, and pilot dynamic response for a particular choice of aircraft dynamics, display, controller, and task. The conventional control system design methods are reviewed, the pilot response data presented, and data for long delays, all suggest lead filter compensation of display delay. Pilot-aircraft system crossover frequency information guides compensation filter specification. G.R.

A81-48371 **Application of optimal control and estimation to autopilot and autothrottle systems.** P. D. Daniels and D. Gangsaas (Boeing Commercial Airplane Co., Seattle, WA). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 562-565.

Methods for improving autopilot and autothrottle designs are discussed. Particular attention is given to reducing speed and path deviations and control surface activity in the presence of gust wind shear disturbances during the climb, cruise, and descent phases of flight. Linear quadratic regulator synthesis is used for the design of optimal full state feedback controllers. Kalman filters are designed for optimal estimation of airplane and wind states, and computer simulations are used for evaluation of various control designs. V.L.

A81-48373 **Optimization of simulation models for avionics software verification.** S. L. Benning (USAF, Avionics Laboratory, Wright-Patterson AFB, OH) and A. C. Brewer (Systems Consultants, Inc., Dayton, OH). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 570-573. 5 refs. Contract No. F33615-79-C-1739.

Various optimization techniques applied to maintain a cost-effective simulation system are investigated for the reorganization of the DAIS models simulation system. Present model requirements are discussed, and methods of optimizing are presented, including system analysis, priority matrix, SET/USE program, standard comment header, COMMON standard, structured FORTRAN, and word processing. Three phases of testing are used to verify the enhanced performance of the models, including stand-alone testing, integration and functional testing, and system testing. Any anomalies are detected, corrected, and verified to confirm proper operation. Results demonstrate an exceptionally effective methodology with widespread applications, producing faster and better structured models which are more readily maintained and transported. D.L.G.

A81-48376 **Development considerations for real-time aircraft/avionic distributed computer control systems.** R. D. Hawkins (U.S. Naval Air Systems Command, Washington, DC). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 586-589.

Concepts in real-time aircraft/avionic distributed computer control systems are investigated in an effort to produce a superior avionic product. NATO's efforts to establish an architecture oriented avionics technology are discussed, and the objectives of the Tactical Air Combat Technology Integration and Coordination System (TACTICS) are presented, including a continuity in the design process as a result of close interaction between all major elements of the computer system. The objectives of the systems software simulation laboratory and the real-time simulation laboratory are also presented, including the synthesis and formulation of tactical air combat avionics suites and the physical validation of actual hardware. Needs of the TACTICS facility such as the development of structured methodology to perform the synthesis functions are explained, and the solution is found in the structured design approach which requires the partitioning of the system functions into isolated modules. D.L.G.

A81-48379 **Engine requirements for the T-37 trainer aircraft - A simulation study and analysis.** T. D. Clark, Jr., L. W. Emmelhainz, and M. A. Martinez (USAF, Institute of Technology, Wright-Patterson AFB, OH). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 660-662.

The Air Force requires an operational inventory of aircraft engines to maintain the flow of T-37 aircraft used in basic pilot-training programs. This paper reports the results of a study of the system for acquiring and managing engines and components to support the flying training program. A network model was constructed and tested, and a number of experiments conducted to address key issues and problems in the system. The model is programmed using the Q-GERT simulation language. It focuses on the engine service required to support given levels of flying activity. Inventory levels at distributed points in the system are investigated and policies for placement recommended. The structure of the repair system is focused upon and various alternatives for its design are investigated. (Author)

A81-48380 **Determination of cargo container inventories through logistics simulation.** D. H. Cone (Boeing Computer Services Co., Seattle, WA). In: Summer Computer Simulation Conference, Seattle, WA, August 25-27, 1980, Proceedings. Arlington, VA, AFIPS Press, 1980, p. 714-718.

A Container Movement Logistics Model was designed to evaluate the air shipment of cargo containers within a network of airport pairs. The simulation described in the paper was designed to determine the number of cargo containers required for a known level of air shipments, but the technique may be applied to surface transportation modes including rail, truck, and ship. (Author)

A81-48385 **Transient vibrations of elastic panels due to the impact of shock waves.** J. R. Coleby and J. Mazumdar (Adelaide, University, Adelaide, Australia). *Journal of Sound and Vibration,* vol. 77, Aug. 22, 1981, p. 481-494. 14 refs.

The dynamic response of elastic panels subjected to pressure loadings by shock waves is investigated. Accurate approximate solutions for the time-history response (displacement and strain) of both a completely clamped panel and a simply supported panel are obtained. The transient behavior is discussed by using the isoamplitude contour lines method in conjunction with the normal mode method. The derived analyses are shown to be applicable in estimations of window, wall panel, or flat roof response to sonic boom or explosion blast waves. Illustrative examples are given for the response of an undamped skew panel and for an undamped triangular panel. Results, given in graphic form, are in good agreement with those obtained in previous investigations. J.F.

A81-48390 **Finite strip analysis of singly curved skin-stringer structures.** M. Petyt and C. C. Fleischer (Southampton, University, Southampton, England). *Journal of Sound and Vibration,* vol. 77, Aug. 22, 1981, p. 561-571. 17 refs. Research supported by the Ministry of Defence (Procurement Executive).

It is shown that the finite strip method can accurately predict the natural frequencies and modes of vibration of singly curved, skin-stringer arrays. The elements analyzed included a rectangular, singly curved, finite strip shell element and a new, compatible thin walled, open section beam element. Convergence studies for freely supported and clamped singly curved, rectangular shells show that only a few strips need to be used to obtain good accuracy. Both five bay and 15 bay skin-stringer structures were analyzed; the five bay structure analysis produced results similar to those of the transfer matrix method; the frequencies and mode shapes obtained in an analysis of the 15 bay structure also agreed closely with experimental measurements. J.F.

A81-48395 * **Trailing edge noise prediction from measured surface pressures.** T. F. Brooks (NASA, Langley Research Center, Hampton, VA) and T. H. Hodgson (North Carolina State University, Raleigh, NC). *Journal of Sound and Vibration,* vol. 78, Sept. 8, 1981, p. 69-117. 35 refs. Grant No. NsG-1377.

Trailing edge (TE) noise is investigated for the case of a two-dimensional airfoil embedded in a uniform low Mach number flow, and the usefulness of several TE noise theories is examined by applying them to the measured data. The TE noise spectra and directivity are quantitatively determined for the case of a high Reynolds number and a fully turbulent boundary layer. Parameters include angle of attack, flow velocity and TE bluntness. Evanescent wave theories by Chase (1975) and Chandiramani (1974) are compared to the present results and show good agreement. Agreement of the near field pressure scatter phenomenon analysis with measurements implies that the basic assumptions used in the analysis are correct, i.e., the turbulent boundary layer (TBL) flow passes the trailing edge into the wake region. No hydrodynamic wake shedding activity is confirmed for the two-sided TBL flow, and a method incorporating the principles of the coherent output power method is used to determine the sound field. The near field edge scatter model is found to not only establish optimum sizing of edge treatment for noise control, but also to separate and identify the scattered field from the incident hydrodynamic field. D.L.G.

A81-48401 # **Operational characteristics comparison /ACV and SES/.** F. W. Wilson and P. R. Viars (U.S. Naval Material Command, David W. Taylor Naval Ship Research and Development Center, Bethesda, MD). *American Institute of Aeronautics and Astronautics, Marine Systems Conference, 6th, Seattle, WA, Sept. 14-16, 1981, Paper 81-2064.* 12 p. 8 refs.

The performance of a fully skirted air cushion vehicle (ACV) relative to a sidehull air cushion vehicle or to a surface effect ship is evaluated by comparing the estimated total drag and power of the two vehicle types. The craft are compared on the basis of equivalent displacement, length-to-beam (L/B) ratio, loading, and speed. Drag estimation techniques, developed under the Amphibious Assault Landing Craft project for the ACV predictions and under the Surface Effect Ship project for the SES predictions, are used in the evaluation. The parameter ranges covered in the study were speed (30 to 70 knots), displacement (100 to 10,000 long tons), and loading (1.0 and 3.0 lb/ft). Results indicate that each craft type has distinct operational ranges where it has a powering advantage over the other craft. (Author)

A81-48416 # **A new approach to weapon separation aerodynamics.** F. A. Tessitore, A. Cenko, R. C. Meyer (Grumman

Aerospace Corp., Bethpage, NY), R. D. Dyer, and J. D. Waskiewicz (USAF, Wright Aeronautical Laboratories, Wright-Patterson AFB, OH). *American Institute of Aeronautics and Astronautics, Aircraft Systems and Technology Conference, Dayton, OH, Aug. 11-13, 1981, Paper 81-1654.* 8 p. 8 refs.

An innovative approach has been developed for predicting the aerodynamic forces and moments acting on a store during separation from a parent aircraft. The method utilizes data obtained for one store in the flowfield to predict the forces and moments of another store in the same flowfield by identifying the local angle-of-attack distribution in proximity to the parent aircraft. Extensive comparisons between theory and test are shown for two different parent models, each with two different stores (four stores in all) at supersonic speeds, indicating the excellent correlation achieved. The potential for substantial wind tunnel cost savings is identified. (Author)

A81-48417 # **Determination of thrust and throttle-dependent drag for fighter aircraft.** B. L. Hunt and N. S. Gowadia (Northrop Corp., Aircraft Div., Hawthorne, CA). *American Institute of Aeronautics and Astronautics, Aircraft Systems and Technology Conference, Dayton, OH, Aug. 11-13, 1981, Paper 81-1692.* 15 p. 13 refs.

This paper reviews the problem of determining the thrust and throttle-dependent drag of fighter aircraft. The flight conditions for which throttle-dependent drag is important are identified. Means of determining throttle-dependent drag are discussed with particular emphasis on wind tunnel techniques and the incorporation of the results into the overall drag build-up of the aircraft. Procedures are described for determining thrust and drag from flight test data. Finally, the impact of advanced concepts, such as thrust vectoring, thrust reversing and highly integrated concepts, on propulsion testing is discussed. (Author)

A81-48479 **Measured pressure distributions and shock shapes on a simple delta wing.** L. C. Squire (Cambridge University, Cambridge, England). *Aeronautical Quarterly,* vol. 32, Aug. 1981, p. 188-198.

This note presents the results of an experimental investigation of the flow over a simple delta wing designed for a Mach number of 3.5. Complete pressure distributions were measured for incidences of 0 deg, 10 deg and 20 deg at Mach numbers of 2.5 and 3.5. A number of schlieren photographs of the shock system around the wing were obtained at the same conditions, and surface streamline patterns were studied at M = 3.5. The measurements were made to support numerical calculations which use this wing as a test case. (Author)

A81-48480 **Evaluation of two-dimensional subsonic oscillatory airforce coefficients and loading distributions.** D. J. Salmond (Royal Aircraft Establishment, Farnborough, Hants., England). *Aeronautical Quarterly,* vol. 32, Aug. 1981, p. 199-211. 9 refs.

A method is described for calculating numerically the aerodynamic stiffness and damping coefficients and loading distributions for a two-dimensional thin aerofoil oscillating harmonically in subsonic flow, from the Possio Integral Equation by approximating the loading by a finite series of basis functions. Sample loading distributions obtained by using the method are presented for a Mach number of 0.9 and a frequency parameter of 0.4. (Author)

A81-48544 **Adaptive features and measurement requirements for advanced surveillance radars.** B. H. Browne, Jr., L. Ekchian, and L. J. Lawdermilt (Sperry Corp., Clearwater, FL). In: EASCON '80; Electronics and Aerospace Systems Conference, Arlington, VA, September 29-October 1, 1980, Conference Record. New York, Institute of Electrical and Electronics Engineers, 1980, p. 190-194. 10 refs. Contract No. F30602-79-C-0152.

The measurement accuracy requirements for several classes of tactical air control problems are discussed, and adaptive approaches to beam scheduling and tracking are presented that exploit the agile beam capabilities of the radar to jointly meet both search and track requirements over a wide range of tactical situations. It is found that adaptive features are required in future agile-beam surveillance radars, including adaptive beam scheduling, adaptive waveform selection, adaptive tracking filters, and tracking filter selection. It is noted that in future agile-beam surveillance radars it will be expedient to employ algorithms that adaptively select tracking filters matched to the assessed tracking difficulty and available processing power. C.R.

A81-48547 **COMLINK - A communications/EW analytical and modeling tool.** R. K. Keenan (Keenan Corp., Vienna, VA). In: EASCON '80; Electronics and Aerospace Systems Conference, Arlington, VA, September 29-October 1, 1980, Conference Record. New York, Institute of Electrical and Electronics Engineers, 1980, p. 244-252. 10 refs.

COMLINK is defined as a user-interactive microcomputer-based system designed to provide an objective basis for rapid and accurate analyses and modeling of communications scenarios involving three-dimensional dynamic tactical and strategic geometries, with or without jammer. The analytical approach to the conditions of no spectrum spreading, frequency hopping, direct spread spectrum, and hybrid Blue modes (the modulation being QPSK or BPSK or FSK or SQPSK) and follower or barrage or no jammer are discussed. Numerical results are given for an example tactical problem (16 kbit QPSK voice, follower jammer). The purpose is to record the insights of a certain group of engineers on how to deal with the 'dB bookkeeping' problem when the computational tedium index is stressed in the analysis of modern spread-spectrum communications systems. C.R.

A81-48558 # **Availability requirements of the future ATC system.** A. G. Zellweger (FAA, Washington, DC). In: EASCON '80; Electronics and Aerospace Systems Conference, Arlington, VA, September 29-October 1, 1980, Conference Record. New York, Institute of Electrical and Electronics Engineers, 1980, p. 400-405.

The functional evolution of ATC computer availability requirements is reported with emphasis on fault tolerance and system backup to establish the evolving requirements for availability. ATC is characterized in terms of a closed loop theory model consisting of functional elements such as a data managing function and a system function which executes control actions and is subject to disturbances such as weather and equipment outages. The ATC system of the 1980's and beyond the 1990's is discussed, and improvements are proposed, including increasing the number of control processes automatically performed, and entering new and revised data at all operational positions. Present and future fault tolerance requirements are also discussed, and improvements in error detection and isolation are suggested, which require greater software correctness through proofs of critical modules. Safety is the overriding concern, and a quantitative increase in confidence in system safety is sought. D.L.G.

A81-48559 * **Reliability validation of systems for life-critical applications.** K. S. Trivedi (Duke University, Durham, NC), J. W. Gault (North Carolina State University, Raleigh, NC), and J. B. Clary (Research Triangle Institute, Research Triangle Park, NC). In: EASCON '80; Electronics and Aerospace Systems Conference, Arlington, VA, September 29-October 1, 1980, Conference Record. New York, Institute of Electrical and Electronics Engineers, 1980, p. 406-409. 7 refs. Contract No. NAS1-15833.

A framework is proposed which addresses traditional reliability validation approaches consisting of life testing techniques which are inapplicable for digital flight control systems. A specific validation methodology is identified based on logical proofs, analytical modeling, and experimental testing. Research activities required to support continued development of validation technology are identified, and the validation procedure is driven by the reliability model obtained from the system description. The analytical reliability model is shown to be a proper abstraction of the system under consideration, and a proof of correctness of system design and system scheduler performance is proposed. D.L.G.

A81-48566 **Infrared airborne radar.** R. C. Harney (MIT, Lexington, MA). In: EASCON '80; Electronics and Aerospace Systems Conference, Arlington, VA, September 29-October 1, 1980, Conference Record. New York, Institute of Electrical and Electronics Engineers, 1980, p. 462-471. 12 refs. USAF-sponsored research.

A program aimed at developing and demonstrating the technology necessary for the construction of infrared radars for tactical airborne applications is briefly reviewed. Infrared radar and conventional radar are compared, the comparison showing that infrared radar is a direct extension of the conventional radar principles to infrared wavelengths. A testbed radar system for measuring imaging properties, weather penetration, and moving target indication is described, and it is stated that tactical airborne applications will require radar systems much more powerful and complex than the testbed radar. A transportable measurements radar, scaled up to parameter values useful in tactical scenarios, and examples of its initial performance are presented. Component technology unique to infrared radars is emphasized, and component developments pertinent to the transportable system are discussed. K.S.

A81-48602 # **Ray-theory predictions of the sound radiated from realistic engine intakes.** A. J. Kempton and M. G. Smith (Rolls-Royce, Ltd., Derby, England). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-1982.* 8 p. 6 refs.

Ray theory is used to calculate the propagation, attenuation, and radiation of broadband fan-noise for realistic engine-intake configurations. The theory is compared with the mode theory for an infinite hyperboloidal duct, showing excellent agreement at the given frequencies, except close to the duct wall; this discrepancy is due to the neglect of diffraction in the ray theory approach outside the shadow region in calculating the radiation of high-frequency sound from a smooth engine intake. Bellmouth intakes had a large effect on the directivity of both the radiated sound and the insertion loss. The sound-pressure-level (SPL) insertion loss at one angle in the far field was more dependent on the source type for ducts fitted with bellmouth intakes than for flanged cylindrical ducts. The effect on the radiated sound of complex intake flows was of the order of the flow Mach number if the flow was rotational, but only of the order of the Mach number squared if the flow was irrotational. A new method of choosing intake liners to optimize the EPNL reduction is described; this method is based on the theory that the SPL insertion loss at typical fan-noise frequencies is largely independent of the source frequency, and depends principally on the liner impedance, liner length, and engine geometry. J.F.

A81-48606 # **An acoustic source modelling technique to predict the near sound field of axisymmetric turbulent jets.** C. V. Sundaram and J. R. Maus (Tennessee, University, Tullahoma, TN). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2022.* 10 p. 9 refs. Contract No. F40600-77-C-0009.

According to the considered technique, the source for each one third octave frequency is modelled by a combination of uncorrelated elementary sources derived from a multipole expansion. The strengths of the various source components at a particular frequency are determined by a constrained least squares fit to the far field directivity pattern. When the effects of the source motion and axial source distribution with frequency are taken into account, the computed sound field agrees reasonably well with data obtained in the near field. Computations at higher frequencies (roughly, above 1000 Hz) indicated that the dependence of the predicted near sound pressure levels on the order of terms considered from multipole expansion series decreases as the frequency under consideration increases. G.R.

A81-48607 * # **The role of the helical jet mode in aerodynamic noise generation.** J. C. Hardin (NASA, Langley Research Center, Acoustics and Noise Reduction Div., Hampton, VA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-1963.* 10 p. 38 refs.

The helical jet mode is modeled by an infinite helical vortex filament, and an exact analytical solution for the induced velocity field interior to the filament is derived. These expressions are then used to model the jet flow field and to analyze the high subsonic and supersonic jet noise generation. It is shown that noise will be generated directly if the helical mode convects or rotates. Reducing this noise by stabilizing the mode is difficult, since the self-induced velocities of the mode itself cause it to convect and rotate; the use of noncircular nozzles is suggested to eliminate the symmetry of the boundary condition. The helical mode can also generate noise indirectly by inducing time-dependent Coriolis accelerations on small-scale turbulence propagating in its induced velocity field. This suggests that any upstream turbulence generation has an enhanced potential for noise propagation when propagating in the presence of the helical mode. J.F.

A81-48608 # **Procedure for evaluation of engine isolators for reduced structure-borne interior noise transmission.** J. F. Unruh (Southwest Research Institute, San Antonio, TX). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-1970.* 12 p. 10 refs.

A structure-borne interior noise transmission model of a test aircraft was developed, based on analytical models of the simulated engine, vibration isolators, and engine mount structure coupled to an empirical model of the fuselage. Interior sound pressure level transfer function data for isolators with varying mechanical properties were analyzed and compared to predicted transmission levels. The elastomeric isolators did not operate as constant property single degree-of-freedom systems with respect to noise isolation: noise isolation beyond approximately 150 Hz leveled off and decreased somewhat above 600 Hz. The frequency dependence of the isolator material properties was found to play an important role in the transmission of structure-borne noise in the mid- to high-frequency region of the spectrum; isolator stiffness was a strong parameter, while isolator damping was a much weaker parameter. Moderate changes to the lightweight high-strength engine mount structure did not affect the transmission phenomena. J.F.

A81-48610 # **Prediction of flyover jet noise spectra.** U. Michel (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Abteilung Turbulenzforschung, Berlin, West Germany) and A. Michalke (Berlin, Technische Universität, Berlin, West Germany). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2025.* 9 p. 17 refs.

A scaling law is derived for predicting the flyover noise spectra of a single stream shock free circular jet from static experiments. The law is valid for unheated and heated jets, the theory being based on an experimentally supported similarity law for the influence of the flight velocity on the turbulent flow field of a jet. The resulting scaling laws for the difference between third octave spectra and the overall sound pressure are found to compare very well with flyover experiments with a jet engine and wind tunnel experiments with a heated model jet. C.R.

A81-48612 * # **Theoretical and experimental evaluation of transmission loss of cylinders.** Y. S. Wang, M. J. Crocker (Purdue University, West Lafayette, IN), and P. K. Raju. *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-1971.* 10 p. 13 refs. NASA-supported research.

A technique is reported which evaluates the transmission loss of a cylinder from measurements of the incident and transmitted intensities. Incident intensity is calculated from the space-averaged measured pressure and the assumption that the source space is reverberant. Transmitted intensity is measured by means of the microphone acoustic intensity technique using a fast Fourier transform analyzer. The first dip at the ring frequency, and the other at the critical coincidence frequency are predicted in the transmission loss curve of a cylindrical shell with a 0.762 m diameter and a 1.67 m length. Results are compared and demonstrate good agreement for frequencies above 500 Hz. It is concluded that the technique combining the measurement of both intensities gives accurate results and is simpler and less expensive than the conventional method. D.L.G.

A81-48613 * # **Experiments on the nonlinear characteristics of noise propagation from low and moderate Reynolds number supersonic jets.** J. A. Gallagher and D. K. McLaughlin (Oklahoma State University, Stillwater, OK). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2041.* 9 p. 10 refs. Grant No. NAG1-10.

A series of experiments were conducted on high-speed model jets to identify and quantify the distortion of radiated noise by nonlinear propagation effects. The jets were operated in a low to moderate Reynolds number range, and the radiated noise was either broadband or discrete in frequency. Three condenser microphones were used to measure the waveforms propagated by the axisymmetric, cold model jets of Mach numbers 2.1 and 2.5. Relatively low Reynolds numbers were obtained by exhausting the jets into a low pressure anechoic test chamber. Nonlinear propagation distortion effects, such as wave steepening, harmonic generation and wave merging, were easily quantified. At a moderate Reynolds number, low frequency production and wave amalgamation, measured by a decrease in the zero crossings per unit time, were quantified in the propagation of sound away from the jet. J.F.

A81-48615 * # **Tip geometry effects on the model helicopter rotor low frequency broadband noise.** N. G. Humbad and W. L. Harris (MIT, Cambridge, MA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2003.* 14 p. 19 refs. Grant No. NsG-1583.

The effect of rotor blade tip shapes and performance parameters on the low frequency broadband noise (LFBN) is investigated experimentally. The experimental results show 2 to 5 dB reductions for swept geometries compared with square tip blades at constant blade loading. A theoretical model is formulated which includes a detailed lift response function. For the square tip blades, theoretical results are found to be in good agreement with the experimental results. While the effects of advance ratio and tip speed on the LFBN are explicable, those of blade loading are not clearly understood. C.R.

A81-48618 * # **Laboratory study of efficient add-on treatments for interior noise control in light aircraft.** J. S. Mixson, L. A. Roussos, C. K. Barton (NASA, Langley Research Center, Hampton, VA), R. Vaicaitist (Columbia University, New York, NY), and M. Slazak. *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-1969.* 12 p. 15 refs.

Experimental and theoretical studies of the transmission loss (TL) of 1.15 x 1.46 m flat stiffened-skin aluminum panels are described. Panel configurations included panels with no treatment and eight combinations of treatments consisting of a fiberglass-septum layer, a foam-foil damping material, and a plywood double wall trim panel. Measured TL of the untreated panel and the panel with a damping layer showed characteristics of the double mass law: at low frequencies the TL followed a mass law trend associated with the average mass of both skin and stiffness, while at higher frequencies the TL followed a mass law trend associated with skin mass only. A comparison of TL for panels treated with a damping layer, a fiberglass layer, or a trim panel showed that the effects of damping are frequency dependent with some performing better below 500 Hz and others performing better above 500 Hz. Treatment combinations showed that two treatments with the same mass could have TL values different by about 10 dB, while other combinations having weights different by a factor of two could have TL values within a few dB over most of the frequency range. The highest TL values (50 dB at 1000 Hz) were obtained with a treatment consisting of a fiberglass layer, a trim panel, and damping layers on both the stiffened panel and the trim panel. J.F.

A81-48620 # **Engine noise source breakdown - Theory, simulation and results.** B. J. Tester (Rolls-Royce, Ltd., Derby, England) and M. J. Fisher (Southampton, University, Southampton, England). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2040.* 11 p.

Cross-spectrum measurements in the far-field of an aero-engine are processed to form a source image along the engine axis. The intensity of the intake, bypass, core and mixing noise sources is estimated from the image, provided the sources are well separated on the wavelength scale. The 'best squares' fit procedure is used to automate the source breakdown calculation by eliminating the source-image stage of data analysis, thereby permitting larger volumes of data to be processed. Numerical studies and practical results demonstrate that the method can be used at far lower frequencies than those for which individual source contributions could be discerned from a resolution limited source image. Far less comprehensive microphone arrays are required, since there is no general aliasing problem. Application of this technique to the separate core and jet mixing noise on a Viper engine yields a range of valuable data, previously unavailable; the technique is not restricted to a line array of point sources, but can be extended to an arbitrary array of either compact or noncompact sources. J.F.

A81-48621 * # **Turbomachinery noise studies of the AiResearch QCGAT engine with inflow control.** J. G. McArdle, L. Homyak, and D. D. Chrulski (NASA, Lewis Research Center, Cleveland, OH). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2049.* 16 p. 17 refs.

The AiResearch Quiet Clean General Aviation Turbofan engine was tested on a vertical lift fan facility to measure the acoustic performance of two inflow control devices (ICD) of similar design, and three inlet lips of different external shape. Far-field directivity patterns calculated by existing analyses were compared with the measured fan fundamental blade passing frequency (BPF/F/) and broadband data. Installing an ICD on an engine with hardwall ducts reduced the BPF(F) tone everywhere in the far-field. When the ICD was installed on an engine with active acoustic panels, tone reduction in the forward quadrant was comparable to that in the hardwall tests; in the aft quadrant, however, tone noise was attenuated by the large acoustic panels in the bypass duct to such a degree that the ICD had little effect. Tests to compare performance of ICDs with hardwall inlet ducts showed only minor differences in the BPF(F) directivity patterns, while broadband noise was the same for both. Forward-quadrant BPF(F) and broadband directivity patterns were found to be similar for the inlet lips tested with a hardwall inlet duct. At high fan speeds, however, the shape of the analytical multimodal tone pattern from the exhaust nozzle was flatter than the measured patterns. The sources of lobes from several propagating single modes found in the forward-quadrant BPF(F) data were attributed to rotor/strut interaction and the rotor-alone pressure field. J.F.

A81-48625 * # **Contributions to the theory of side edge flap noise.** M. S. Howe (Bolt Beranek and Newman, Inc., Cambridge, MA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2036.* 11 p. 17 refs. NASA-supported research.

High and low frequency asymptotic formulas are derived which express the acoustic frequency spectrum in terms of the wavenumber-frequency spectrum of surface pressure fluctuations on the upper surface of a part span flap, measured in-board of the side edge. Interpolations between the results are used to predict the field shape and its dependence on the subsonic forward flight speed over the whole frequency range. The radiation has the characteristics of a semibaffled dipole at small values of the Strouhal number based on the chord of the flap and the forward flight speed. The degree of Doppler amplification due to forward flight speed of the aircraft is dependent on the Strouhal number: the radiation efficiency of side-edge noise sources is governed by the value of the mean side-edge gap Strouhal number, and is larger when this number is small. Theoretical predictions extrapolated to full scale suggest that the noise generated at a single side edge can exceed that generated along the whole of the trailing edge of the flap by 3 dB. J.F.

A81-48626 * # **Prediction of jet exhaust noise on airframe surfaces during flight.** L. M. Butzel (Boeing Co., Seattle, WA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2035.* 14 p. 16 refs. Research supported by the Boeing Commercial Airplane Co.; Contracts No. F33657-72-C-089; No. F33615-77-C-3035; No. NAS2-9328.

The behavior of pressure fluctuations measured on the airframe of a prototype high lift jet transport (YC-14) is presented. The data are characterized in terms of a particular jet exhaust flow field idealization, jet mixing noise, and exhaust shock noise. Generalized spectrum shapes and scaling relations for peak level and frequency of peak level are developed, and the frequency is found to depend on jet exhaust velocity and aircraft velocity. Comparisons are made with near-field engine exhaust noise of a conventional jet, and results suggest that the same two exhaust noises are important for both aircraft types. Surface fluctuating pressure data are assessed, and results suggest that the jet mixing and exhaust shock noise source characterizations for the YC-14 have useful applicability to conventionally configured jets. D.L.G.

A81-48627 # **The effect of vane-frame design on rotor-stator interaction noise.** P. Y. Ho (General Electric Co., Aircraft Engine Business Group, Evendale, OH). *American Institute of Aeronautics* *and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2034.* 11 p. 20 refs.

Test results of a conventional uniform outlet vane design and an integral vane frame are reported. A turbulence control structure installed over a 20-inch-diameter motor-driven fan inlet is used to determine the difference in overall noise levels. Aerodynamic and acoustic measurements are made for 12 min of recording at a tape speed of 7.5 in./sec, and a method for calculating the steady state potential field noise by struts and pylons is presented. It is found that integral vane-frame design causes blade passing frequency cut-on at low speeds. Rotor-stator spacing is observed as having a severe impact on rearward propagating noise in terms of broadband and tone levels; however, due to large rotor-stator spacing and a smaller rotor incidence angle for the vane-frame design, the overall difference in noise levels between the two configurations is insignificant. It is concluded that in actual engine design practice, an integral vane-frame design is acceptable when sufficient spacing is given between the rotor trailing edge and the vane-frame leading edge. D.L.G.

A81-48628 * # **Effects of blade-vane ratio and rotor-stator spacing on fan noise with forward velocity.** R. P. Woodward and F. W. Glaser (NASA, Lewis Research Center, Cleveland, OH). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2032.* 12 p. 30 refs.

A research fan stage is acoustically tested in an anechoic wind tunnel with a 41 m/sec tunnel flow. Two stator vane numbers giving cut-on and cut-off conditions are tested at three rotor stator spacings ranging from 0.5 to 2.0 rotor chords. Hot-film anemometer turbulence measurements are made at the leading edge of the stator for each spacing, and a crossed film anemometer is radially transversed to define streamwise and upwash characteristics of the rotor blade wakes. Trends in the acoustic results are observed in the front and aft quadrants at 80% design fan speed. Aft quadrant results demonstrate a fundamental tone 9 dB lower for the 25 vane stator than for the 11 vane stator, while overtone levels are 3 dB higher. The cut-off criterion strongly controls fundamental tone level at all spacings, and spacing trends of the wake-defect upwash component show good agreement with corresponding cut-on acoustic tone levels. D.L.G.

A81-48629 # **Flight test of the 747-JT9D for airframe and jet-flap interaction noise.** O. Kipersztok and G. Sengupta (Boeing Commercial Airplane Co., Seattle, WA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2037.* 10 p. 7 refs.

This paper describes the methodology used to isolate the individual airframe noise components and determine their relative contribution to the total noise radiated by a 747 aircraft with JT9D-7A engines at approach. The individual components are isolated using ensemble averaged flight test data. The spectral data are normalized on the basis of altitude, airspeed, temperature, and relative humidity. The noise radiated at approach is reconstructed from addition of individual components and compares very accurately, in level, spectral shape and directivity pattern, to the actual flyover. A comparison is made between each individual airframe noise component and their logarithmic sum, representing the synthesized total airframe component, and Fink's prediction method. The results of this study show that the landing gear, when isolated from configurations having the flaps retracted, is the major contributor to airframe noise. If the effect of flap deployment is included in the isolation of the landing gear noise component, this result could be altered. No evidence of significant jet-flap interaction noise is found for the 747-JT9D aircraft. (Author)

A81-48634 # **Comparative acoustic wind-tunnel measurements and theoretical correlations on subsonic aircraft propellers at full-scale and model-scale.** W. J. G. Trebble, J. Williams (Royal Aircraft Establishment, Aerodynamics Dept., Farnborough, Hants., England), and R. P. Donnelly (Royal Aircraft Establishment, Aerodynamics Dept., Farnborough, Hants.; Dowty-Rotol, Ltd., Cheltenham, England). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2004.* 15 p. 14 refs.

Experiments are performed on a Dowty-Rotol four-bladed R292 propeller at full scale in a 24 ft anechoic tunnel, and at quarter-scale on a geometrically similar model in a 1.5 m acoustic tunnel. Measurements of power, torque and thrust are simultaneously made with microphone recordings of the propeller noise signal. Third-octave and narrow-band spectra are analyzed in a range of rotational speeds up to a blade-tip Mach number of 0.75 with tunnel airspeeds up to 50 m/s. Variation of propeller nacelle incidence up to 10 deg has little effect on noise level, and the empirical relationship from tunnel full-scale tests correlates with measurements from external fuselage-mounted microphones on a twin propeller Shorts 330 aircraft, although installation effects raise the absolute level by 7 dB. The quarter-scale model has similar acoustic and aerodynamic characteristics to those of the full-scale propeller, and substantially better noise measurements are attainable in the 1.5 m acoustic tunnel than in the 24 ft anechoic tunnel. D.L.G.

A81-48635 * # **Comparison of predicted engine core noise with current and proposed aircraft noise certification requirements.** U. H. von Glahn and D. E. Groesbeck (NASA, Lewis Research Center, Cleveland, OH). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2053.* 11 p. 15 refs.

Predicted engine core noise levels for subsonic CTOL aircraft engines are compared with measured total aircraft noise levels and to the spectral envelope, with a peak at 400 Hz which is assumed to be shifted in flight by a Doppler shift in frequency. Preceived noise levels are computed for appropriate engine power settings at desired flight conditions, and reductions in sideline noise levels are made to account for jet and airframe shielding effects. Results indicate that core noise can provide a barrier to the proposed EPA stage 4 and 5 federal noise rules for wide-body aircraft, with the most severe core noise problem occurring at takeoff and sideline measuring stations. D.L.G.

A81-48636 # **Some modal-frequency spectra of fan noise.** T. G. Sofrin. *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-1990.* 12 p.

Features of fan-compressor noise are described by means of modal-frequency spectra, which give both modal and frequency distributions of acoustic power. A simple form of spectral function is used, which allows fan noise spectral characteristics to be easily estimated in terms of design and operating characteristics. Examples of modal-frequency spectra are given for rotor-stator interaction, turboprop interactions, a two-stage fan, and inlet distortion interactions. Methods for reducing inflow turbulence present during ground tests are described, and the development of improved quiet fan designs is found to depend on the ability to measure mode structure. Several significant fan noises are illustrated, including examples of discrete frequency, multiple pure tone, and broadband noise. In addition, due to static operation producing strong inflow turbulence interactions, and unacceptably restrictive and expensive flight development testing, more effort is being placed on reducing static environmental effects. D.L.G.

A81-48637 * # **Assessment of inflow control structure effectiveness and design system development.** A. A. Peracchio (United Technologies Corp., Pratt and Whitney Aircraft Group, East Hartford, CT). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2048.* 12 p. 5 refs. Contract No. NAS1-15085.

Inflow control structures used during static testing of fans are shown to minimize inflow distortions and thus stimulate the inflight flow field and noise generating mechanisms. Acoustic tests are conducted on a Pratt and Whitney aircraft JT9D engine with and without an inflow control structure. Raw data are corrected to 77 deg, and time is averaged over 0.5 second intervals. Use of an inflow control structure is found to significantly reduce blade passage frequency tone, while having little effect on twice blade passage frequency tones, and significantly improves agreement between static data projected to flight and flight data for the blade passage frequency fan tone. A design system is also presented, which prescribes structure shape, size and construction. D.L.G.

A81-48638 * # **Ground effects on aircraft noise for a wide-body commercial airplane.** W. L. Willshire, Jr. (NASA, Langley Research Center, Hampton, VA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA,* *Oct. 5-7, 1981, Paper 81-1988.* 8 p. 10 refs.

Ground effects on noise from a high-bypass ratio engined aircraft are investigated. A 747 is flown at altitudes from 30 to 960 m past a 20-microphone array, and ground effects are calculated from noise measurements as a function of elevation angle and slant range. Results are given in terms of EPNL units and are compared with previous results of a turbojet-powered T-38 and SAE-recommended empirical lateral attenuation prediction procedures. Theoretical predictions are made based on a method developed by Pao et al. (1978) and are compared with both 747 and T-38 results, demonstrating good agreement although a consistent underprediction of peak measured attenuation is observed. Measured ground effects are found largest at 200 Hz, and no definite shielding differences are apparent for a directivity angle of 122.5 deg. Less lateral attenuation of effective perceived noise is measured for both aircraft and is attributed to the dominance of low-frequency noise in the source spectrum. D.L.G.

A81-48639 * # **Mixer nozzle aeroacoustic characteristics for the energy efficient engine.** P. R. Gliebe, G. T. Sandusky (General Electric Co., Aircraft Engine Group, Cincinnati, OH), and R. Chamberlin (NASA, Lewis Research Center, Transport Propulsion Office, Cleveland, OH). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-1994.* 11 p. NASA-supported research.

Aeroacoustic tests are conducted on scale model mixer nozzle configurations, a separate flow nozzle, and a baseline conical nozzle in an anechoic chamber free-jet facility to investigate exhaust system designs. Far-field acoustic data and exhaust jet plume aerodynamic data are obtained for various combinations of exhaust jet velocity and simulated flight speed, with corrected microphone data at a constant 12.2 m arc distance, and scaled acoustic data at a sideline distance of 457 m. It is found that jet plume aerodynamic and acoustic characteristics of lobed mixer exhaust systems are similar to those of a conical nozzle operating at the same specific thrust, although differences occur at high frequencies, where the sound pressure level of the mixer nozzle is 1-5 dB higher than that of a conical nozzle. In addition, no direct correlation is found between exit plane turbulence levels and plume development or acoustic characteristics for mixer exhaust configurations. D.L.G.

A81-48640 * # **Acoustic and turbulence measurements of a tone-excited jet with and without flight simulation.** K. K. Ahuja, J. Lepicovsky, and R. H. Burrin (Lockheed-Georgia Co., Marietta, GA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2007.* 12 p. 10 refs. Research supported by the Lockheed-Georgia Co.; Contract No. NAS3-21987.

Acoustic as well as turbulence measurements were made of tone-excited jets to obtain an understanding of the broadband noise augmentation mechanism. Results for both heated and unheated jets with and without flight simulation are presented for a range of excitation frequencies and levels, as well as for the zero order and first order spinning modes. It is argued that although the phase-locked large-scale turbulence structure is at the root of the noise amplification process, the actual noise generation mechanism lies in the small-scale turbulence. Results show that (1) the phase velocity of the excited large scale instability waves is subsonic relative to the ambient fluid and (2) broadband jet noise is almost uniform at all frequencies. Moreover, when the large-scale and small-scale structures are plotted against forward velocity (for a given upstream excitation level of 141 dB), the change in large-scale turbulence is negligible with forward velocity, whereas the small-scale turbulence decreases for both excited and unexcited jets. Also, the corresponding difference in far-field noise does not appear to change significantly, indicating that the changes in small-scale turbulence are responsible for jet noise amplification. J.F.

A81-48644 # **Prediction method for aeroacoustic loads on under the wing blown flaps.** D. Lohmann (Deutsche Forschungs- und Versuchsanstalt für Luft- und Raumfahrt, Abteilung technische Akustik, Braunschweig, West Germany). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2038.* 11 p. 15 refs.

Regression analyses are performed based on fluctuating surface-pressure data from the McDonnell-Douglas YC-15 STOL prototype aircraft to develop a prediction scheme for aeroacoustic loads on under-the-wing blown flaps. Flight and engine exhaust Mach numbers, flap angle, and flight-altitude are used as primary parametrical variables to calculate third-octave band surface pressure level spectra and overall levels for any chord station on the lower surface of the wing/flap system. Experimental results indicate that the frequency range for 20-2000 Hz is most critical in terms of structural fatigue life, and a marked influence of altitude on overall fluctuating surface-pressure levels appears only in the range from 0 to 10,000 ft, while the difference is less than 2 dB between 10,000 and 30,000 ft. In the case of ground static, the aeroacoustic energy increases with the 3rd and 4th powers of the nozzle exit Mach number, while in the flight case, the energy increases with the 8th to 10th powers of the relative Mach number, which agrees well with predictions. D.L.G.

A81-48647 # **A novel airborne technique for free-field measurements of aircraft noise above the flight path with application to noise-shielding studies.** T. A. Holbeche and A. F. Hazell (Royal Aircraft Establishment, Aerodynamics Dept., Farnborough, Hants., England). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2028.* 12 p. 9 refs.

Wind-shielding effects for a TriStar airliner are deduced from a comparison of engine noise measured simultaneously above and below the flight path. Noise radiated upward is monitored by flying the aircraft beneath a large instrumented fiberglass sphere suspended from a hovering helicopter, while flyover noise at ground level is recorded conventionally. Predicted acoustic diffraction by the sphere results in good directivity and frequency response characteristics, allowing reliable free-field noise data to be readily derived from the fly-under. Experimental checks on this behavior at model and full-scale are reported, including the results of diffraction studies on a half-scale sphere in an anechoic room. Basic considerations regarding application of the technique to noise-shielding studies in flight are outlined and corrections to free-field conditions are evaluated for a range of typical frequencies and sound incidence angles. Most corrections are -6 dB and independent of the source distance, and efficient shielding by the sphere leads to a substantial reduction in helicopter background noise, which improves reliability of the aircraft noise measurements. D.L.G.

A81-48651 # **Effect of excitation on coaxial jet noise as observed by an elliptic mirror.** H. Y. Lu (Boeing Commercial Airplane Co., Seattle, WA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2044.* 9 p. 8 refs.

Coaxial model jets are excited internally by tone and broadband noise under high-bypass-ratio (HBPR) engine exhaust hot gas conditions. The system consists of an internal noise injection section installed 4 ft from the nozzle exit, and 16 Altec horn drivers rated at 50 W per driver. Rotational motion is remotely controlled, and transverse recording is made at 60, 90, 120, and 140 deg. Amplification is found to depend on nozzle configuration, gas conditions, excitation frequencies, and excitation levels and location. HBPR jets without internal acoustic excitation are also examined by using the elliptic mirror, and the secondary ambient premerged jet noise is found to dominate the upstream angles. Acoustic excitation in the secondary duct is most effective due to the sensitivity of the outer shear layer, where jet noise amplification occurs in the subharmonic in a number of cases. In addition, due to increased mixing and higher noise levels of the excited jet, the noise source region is more compact than in unexcited jets, and comparisons of excess jet noise characteristics with HBPR engine noise data indicate that HBPR engines have excess noise. D.L.G.

A81-48653 # **High bypass ratio engine noise component separation by coherence technique.** B. N. Shivashankara (Boeing Commercial Airplane Co., Seattle, WA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2054.* 12 p. 13 refs.

Aft fan, core and jet noise components of a large high bypass ratio engine are separated by means of a signal enhancement technique. Simultaneous signals from three or more microphones are used, which are assumed to have a common correlated part and uncorrelated extraneous noise at each location. Advantages include the internal-to-farfield coherence technique used for component separation when the in-duct microphone signal is contaminated by extraneous noise, and the separation of jet noise from core and fan noise using only far-field microphones. The validity of the technique is demonstrated by a scale proof-of-concept experiment, and the technique is applied for use with signals from three microphones external to the engine. Higher-frequency fan tones are well correlated between fan duct and far-field microphones, which indicates that higher-frequency fan noise tones, such as the blade passage frequency tone, are due to distributed and well correlated sources. D.L.G.

A81-48744 # **Choice of optimal parameters of a gyrovertical on the basis of a standard program (Vybor optimal'nykh parametrov girovertikali po tipovoi programme).** M. A. Sergeev, V. A. Iablonskaia, and A. A. Kubenskii (Leningradskii Institut Tochnoi Mekhaniki i Optiki, Leningrad, USSR). *Priborostroenie,* vol. 24, Aug. 1981, p. 78-84. In Russian.

Algorithms are presented for computing the mean-square error of a gyrovertical with a mixed correction characteristic on the basis of a standard program. A method for choosing the optimal parameters of the gyrovertical is described. B.J.

A81-48847 **Unrepresentative temperatures at a first-order meteorological station - Washington National Airport.** J. L. Foster and R. J. Leffler. *American Meteorological Society, Bulletin,* vol. 62, July 1981, p. 1002-1006. 9 refs.

An examination of temperature records from the three major airports in the Washington, DC, area and from a network of volunteer meteorological observers reveals an exceptional warmth at Washington's National Airport and indicates that National Airport does not represent properly temperature conditions normally experienced in the Washington Metropolitan Area. Temperature differences between National Airport and its environs and other meteorological stations in the Middle Atlantic region can be attributed primarily to the location of National Airport within Washington's heat island and to the proximity of its temperature sensors to the modifying effects of the Potomac River. (Author)

A81-49075 **More fight for the Fighting Falcon.** A. T. Lloyd. *Air International,* vol. 21, Oct. 1981, p. 161-170, 202, 203.

A status report is given on technical developments made and operational experience gained in the first five years of F-16 use by U.S., Europan, and Israeli air forces. Attention is given the manufacturer's Multinational Staged Improvement Program (MSIP), whose three stages will cover aircraft produced until 1989, aimed at the gradual introduction of advanced avionics and weapon systems. Consideration is also given the U.S. Air Force's F-16 flight training and maintenance programs, Europan F-16 construction schedules, operation to date by the Belgian, Dutch, Danish and Norwegian air forces, and two advanced development programs: (1) the Supersonic Cruise Aircraft Modification Program, involving a lengthening of the fuselage and incorporation of a large-area cranked arrow wing, while maintaining 93% commonality with the current airframe and (2) the Advanced Fighter Technology Integration demonstrator, employing control-configured vehicle technology and canard control surfaces. O.C.

A81-49076 * # **Structural synthesis - Its genesis and development.** L. A. Schmit (California, University, Los Angeles, CA). *AIAA Journal,* vol. 19, Oct. 1981, p. 1249-1263. 101 refs. NASA-supported research.

An historical account is given of the development, from its conception in 1960, of the structural synthesis method. While synthesis techniques lag behind analytical ones in both sophistication and application, the structural design procedures created by combining finite element analysis and mathematical programming algorithms have progressed to the point of maturity. As in the case of finite element analysis, use and acceptance of structural synthesis methodology depends on the development and distribution of easily used and well-documented, production-quality computer programs. Attention is given such elementary applications of synthesis methods as the three-bar truss, an integrally stiffened waffle plate, a stiffened cylindrical shell, aircraft fuselage window panels, the structural efficiency of graphite-epoxy hat-stiffened panels, and an idealized delta wing. O.C.

A81-49161 # **Propulsion energy for tomorrow's aviation (Antriebsenergie für die Luftfahrt von morgen).** V. M. Akimov (Tsentral'nyi Nauchno-Issledovatel'skii Institut Aviatsionnogo Motorostroeniia, Moscow, USSR). *(Grazhdanskaia Aviatsiia,* no. 2, 1980.) *Technisch-ökonomische Information der zivilen Luftfahrt,* vol. 17, no. 2, 1981, p. 68-71. In German. (Translation).

One of the objectives of the Central Institute for the Construction of Aircraft Engines in the USSR involves the study of the characteristics for the aircraft propulsion system to be used at the end of the 20th and the beginning of the 21st century. Conclusions reached in this study are discussed. Further improvements in the efficiency of new propulsion units will be possible on the basis of a high bypass ratio and better operational parameter values. It is pointed out that the design of engines of the new generation will require the solution of complex problems concerning gas dynamics, cooling, and materials. The efficiency of turbine and compressor must be further enhanced and the space remaining between moving and stationary parts in compressor and turbine must be reduced. It is expected that, as a result of these steps, it will be possible to obtain a further reduction in fuel consumption by about 10 to 12%. Attention is also given to approaches for increasing the production of aircraft fuels on a hydrocarbon basis, and possibilities for an employment of hydrogen as aircraft fuel. G.R.

A81-49173 **Combat cockpit design.** *Flight International,* vol. 120, Sept. 26, 1981, p. 939-942.

A status report is presented on attempts to give NATO single-seat fighter pilots, whose aircraft are currently being produced at a rate four times greater than that of two-seat combat aircraft, the greatest range of control capabilities against increasingly sophisticated Soviet antiaircraft systems. After surveying the threat posed by four new Soviet SAM systems, the Ram-J, -K and -L aircraft nearing production and the AWACS/Super Foxbat interception system, recent developments in digital radar mode and weapons control, displays, track-while-scan radar, ECM, and automatic, built-in testing of aircraft systems are described. Attention is given design solutions for the F-16, F-18 and AV-8B aircraft, as well as related developments in the A-10 and F-15. Detailed descriptions are given of the WDNS-141 weapon-delivery and navigation display system and the AV-8B joystick- and throttle-mounted, 'hands on' control devices. O.C.

A81-49209 **A process for protecting gas turbine blade cooling passages against degradation.** J. E. Restall, B. J. Gill (National Gas Turbine Establishment, Farnborough, Hants., England), C. Hayman, and N. J. Archer (Fulmer Research Institute, Ltd., Stoke Poges, Bucks., England). In: Superalloys 1980; Proceedings of the Fourth International Symposium, Champion, PA, September 21-25, 1980. Metals Park, OH, American Society for Metals, 1980, p. 405-411. 5 refs.

A new process for the protection of turbine blades and vanes on both external and internal surfaces has been evolved. The surfaces are metallized by pressure-pulsing the coating gases from a near-conventional cementation pack. Penetration occurs into the internal cooling channels which are inaccessible to most other coating processes. Up to 1000 small turbine blades can now be simultaneously pulse aluminized in an industrial plant. (Author)

A81-49374 # **Performance prediction for light airplanes.** E. V. Laitone (California, University, Berkeley, CA). *Journal of Aircraft,* vol. 18, Nov. 1981, p. 988-991. 6 refs.

Oswald's (1932) method for estimating the performance of aircraft with fixed-pitched propellers is extended to modern aircraft with variable pitch propellers. A parabolic variation of the thrust with the flight velocity makes possible the development of explicit relations for the maximum level flight speed and the maximum rate of climb at any altitude up to the absolute ceiling. It is shown that errors may occur if the limitations of the best-fit parabola are exceeded, and that the performance calculations are greatly simplified by representing the propulsive thrust by a parabola. D.L.G.

A81-49375 * # **Influence of landing gear flexibility on aircraft performance during ground roll.** M. M. Sivaramakrishnan (NASA, Langley Research Center, Hampton, VA; Indian Institute of Technology, Bombay, India). *Journal of Aircraft,* vol. 18, Nov. 1981, p. 991, 992.

An analysis is made of the influence of landing gear deflection characteristics on aircraft performance on the ground up to rotation.

A quasi-steady dynamic equilibrium state is assumed, including other simplifying assumptions such as calm air conditions and normal aircraft lift and drag. Ground incidence is defined as the angle made by the mean aerodynamic chord of the wing with respect to the ground plane, and equations are given for force and balance which determine the quasi-equilibrium conditions for the aircraft during ground roll. Results indicate that the landing gear deflections lead to a substantial increase in the angle of attack, and the variation in the ground incidence due to landing gear flexibility could be as much as + or - 50%, and the reduction in tail load requirements almost 25%. D.L.G.

A81-49378 **Compact and highly sensitive fluorescence lidar for oceanographic measurements.** U. Gehlhaar, K. P. Gunther, and J. Luther (Oldenburg, Universität, Oldenburg, West Germany). *Applied Optics,* vol. 20, Oct. 1, 1981, p. 3318-3320. 12 refs. Research supported by the Deutsche Forschungsgemeinschaft.

A compact and highly sensitive helicopter-borne fluorescence lidar is described. The single channel system is based on a high power, tunable laser. From an altitude of 70 m, selective detection of the tracer dye rhodamine B of less than 10 to the -10th g/cu cm in natural waters is achieved. (Author)

A81-49462 # **Automation of air traffic control processes (Avtomatizatsiia protsessov upravleniia vozdushnym dvizheniem).** Iu. P. Darymov, G. A. Kryzhanovskii, V. A. Solodukhin, V. G. Kiv'ko, and B. A. Kirov. Moscow, Izdatel'stvo Transport, 1981. 400 p. 229 refs. In Russian.

The work presents a systematic exposition of the principles underlying the automation of ATC processes as well as the principles of the technical implementation of automatic ATC systems. Particular consideration is given to the development of mathematical models for ATC processes, the evaluation of the efficiency of automatic ATC systems, and the development of algorithms for the automation of ATC processes. B.J.

A81-49471 # **Stress concentration in elements of aircraft structures (Kontsentratsiia napriazhenii v elementakh aviatsionnykh konstruktsii).** R. R. Mavliutov. Moscow, Izdatel'stvo Nauka, 1981. 144 p. 216 refs. In Russian.

The book deals with methods of calculation and experimental determination of stress concentrations in typical elements of aircraft structures. Emphasis is placed on problems of stress concentration in parts subjected to elastic, plastic, and creep deformation under complex loading conditions. The effect of loading history is evaluated. Computer algorithms and programs for stress calculation are presented together with design optimization guidelines. V.L.

A81-49475 # **Design of production processes for flight-vehicle engines (Proektirovanie tekhnologicheskikh protsessov proizvodstva dvigatelei letatel'nykh apparatov).** I. A. Ivashchenko. Moscow, Izdatel'stvo Mashinostroenie, 1981. 224 p. 22 refs. In Russian.

Principles underlying the design of production processes for aircraft and rocket engines are examined. Particular attention is given to metal-treatment accuracy, the quality of the surface layers of engine parts, tolerances, and improved (particularly automated) methods for the mechanical treatment of engine parts. B.J.

A81-49575 # **Commercial airliners - Design and flight operation (Las aeronaves comerciales - Diseño y operación de vuelo).** M. Cuesta Alvarez. *IAA/Ingeniería Aeronáutica y Astronáutica,* vol. 33, Aug.-Sept. 1981, p. 17-34. In Spanish.

After a brief review of historical trends in jet airliner range and passenger-carrying capacity, consideration is given to a variety of topics in airliner design. These include: (1) sizing, with attention to the market opportunities that will exist until the year 2000 for medium-range aircraft with capacities in the 130-160 and 160-200 seat categories; (2) configurations, with stress on the drag reduction and structural load alleviation that may be derived from supercritical profile wings; (3) structures, with emphasis on the role that may be played by such advanced materials as the 7000 series aluminum alloys and carbon- and boron-reinforced composites; (4) high-bypass turbofan engine design; (5) active control technology for flutter suppression and gust load alleviation; and (6) the determination of flight profiles optimized for maximum range and for minimum direct operating costs. O.C.

A81-49727 # **The effect of flight and the presence of an airframe on engine exhaust noise.** S. Bashforth (Rolls-Royce, Ltd., Derby, England). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2029.* 13 p. 15 refs.

A full-scale static and flight test program using an HS 125 aircraft with an RR Viper 601 turbojet was carried out in order to explain the anomalies found between full-scale in-flight exhaust noise studies and model simulations. Both acoustically lined and unlined engine tailpipes were tested, and extensive installation studies were conducted using a replica tail assembly. Source location techniques were used to determine core noise levels over a wide range of frequencies. It is shown that the discrepancy between the static and flight tests was due to a number of noise-producing and/or affecting features of the aircraft/aero engine combination which were not incorporated into the analyses of the data: static tests conducted at NASA Ames demonstrated the importance of installation effects, and flight tests revealed that airframe self-noise can cause a significant amount of the total noise in small aircraft. J.F.

A81-49728 * # **Flight effects on supersonic convergent-divergent nozzle jet noise.** J. Wat and V. Sarohia (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2027.* 9 p. 12 refs.

The influence of forward flight on the noise generation from convergent-divergent (C-D) nozzle flows was determined experimentally. The experiments were performed in an anechoic chamber using a 2.03 cm diameter C-D nozzle with a design Mach number of 1.4 in a 25 cm diameter free jet flow. Far-field noise measurements and spectral analyses were carried out and visualization of the jet shock structure was made by a spark shadowgraph technique. Jet noise from supersonic C-D nozzle flows under forward flight was found to depend critically on the flight velocity and nozzle pressure ratio. Noise reduction up to 20 dB was observed in the rearward quadrant under flight; excess noise in the forward quadrant under flight resulted from relatively high frequency noise sources in the jet flow field. Screech tones, observed from overexpanded C-D nozzle flows, were suppressed during the simulated flight flow. J.F.

A81-49729 * # **Noise radiated from inverted velocity profile jets under simulated flight.** R. A. Petersen and V. Sarohia (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2026.* 8 p. 13 refs. Contract No. NAS7-100.

Measurements were made of the noise radiated by an inverted profile coannular jet. The measurements were made inside an anechoic chamber and forward flight was simulated with an open jet surrounding a coannular nozzle. The diameters of the center and the annular nozzles were 1.27 cm and 2.03 cm, respectively. The open jet wind tunnel was 17.1 cm in diameter and could be operated at speeds up to 150 m/sec. Noise measurements were made in the acoustic far field at several spherical angles ranging from 20 deg to 120 deg relative to the jet axis. Flow through the center jet decreased the noise radiated by the annular jet. The addition of forward velocity further decreased the noise, and the two noise reductions seem to be additive. Measurements of the mean velocity profile demonstrate that forward flight reduced the growth rate of the high speed annular jet, and that center flow reduced the rate of merging of the annular jet. (Author)

A81-49730 # **Shielding concepts for jet noise.** R. L. M. Wong, W. G. Richarz, and H. S. Ribner (Toronto, University, Toronto, Canada). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2020.* 13 p. 33 refs. Research supported by the Natural Sciences and Engineering Research Council of Canada, Grant No. AF-AFOSR-75-2808B.

Point source shielding is investigated as a function of frequency and source/observer positions for a semiinfinite shield. Several concepts for jet noise shielding are explored, and model experiments center on semiinfinite sugar scoop, and infinite planar shields. Results are synthesized into a predictive algorithm for jet noise shielding, in which the jet is modeled as a line distribution of incoherent sources with narrow-band frequency. Edge noise is minimized by hyperbolic cutouts and hybrid shields, and shielding attenuation increases steadily with frequency following low-frequency enhancement by edge noise. Calculated ground contours of peak flyover perceived noise level (PNdB) show a substantial contraction due to shielding which reaches 66% for one sugar scoop shield for the 90 PNdB contour. Results show good agreement with companion analytical calculations, and the mean of two predictive versions agrees with the experimental results from 1 to 1.5 dB up to moderate frequencies. D.L.G.

A81-49731 * # **Noise shielding by a hot subsonic jet.** A. Vijayaraghavan and S. P. Parthasarathy (California Institute of Technology, Jet Propulsion Laboratory, Pasadena, CA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2018.* 6 p. 5 refs. Contract No. NAS7-100.

An analysis is conducted of the shielding of the noise emitted by a high speed round jet by a hot, subsonic, semicircular jet. A plane wave front in the primary jet is resolved into elementary plane waves which undergo multiple reflections at the jet boundaries of the primary and the shielding jets. The jet boundaries are idealized to be vortex sheets. The far field sound is evaluated asymptotically by a superposition of the waves that penetrate the shielding jet. The angular directivities are plotted for several values of jet temperature and velocity to examine the effectiveness of shielding by the semicircular jet layer. (Author)

A81-49732 # **Investigation of performance, noise and detectability characteristics of small-scale remotely piloted vehicle /RPV/ propellers.** D. S. JanakiRam (Hughes Helicopters, Inc., Culver City, CA) and B. W. Scruggs (U.S. Army, Applied Technology Laboratories, Fort Eustis, VA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-2005.* 15 p. 14 refs.

Several small-scale propeller configurations, applicable to a conceptual remotely piloted vehicle, were tested under static and simulated forward flight conditions in a wind tunnel to determine their performance, acoustic, and detectability characteristics. The propellers tested had tractor, pusher, and ducted configurations, designed to develop 4 thrust horsepower at a cruise speed of 75 knots at 4000 ft altitude and 95 F. The acoustic data were used to determine the slant range and altitude of no detection of each propeller configuration. The acoustic and detectability characteristics of small-scale propellers were found to be significantly different from those of the large-scale propellers; this is explained by low disk loading or the low operating Reynolds numbers of the propellers. An increase in forward velocity caused a significant drop in SPLs at higher harmonics of the blade passage frequency. Tip speed had a strong effect on noise and detectability in forward flight: most of the propellers were detected at either the first or second harmonic of their blade passage frequency. Three-bladed propellers were generally less detectable than two- or four-bladed propellers for most of the forward velocities. Finally, ducted and pusher propeller configurations were more detectable and less efficient than their free and tractor counterparts. J.F.

A81-49736 * # **An iterative finite element-integral technique for predicting sound radiation from turbofan inlets.** S. J. Horowitz, R. K. Sigman, and B. T. Zinn (Georgia Institute of Technology, Atlanta, GA). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-1981.* 10 p. 23 refs. Grant No. NsG-3036.

A new iterative solution technique for predicting the sound field radiated from a turbofan inlet is presented. The sound field is divided into two regions; the sound field within the inlet which is computed using the finite element method and the radiation field outside the inlet which is calculated using an integral solution technique. A 'unified' solution is obtained by matching the finite element and integral solutions at the interface between the interior and exterior regions. The applicability of the iterative technique is demonstrated by considering several simple cases for which exact or 'classical' solutions for the sound field are available. These examples show that the proper solution is obtained within five iterations. The overall accuracy of the method is demonstrated by comparison with experimental data. (Author)

A81-49743 * # **An improved prediction method for noise generated by conventional profile coaxial jets.** J. R. Stone, D. E. Groesbeck, and C. L. Zola (NASA, Lewis Research Center, Cleveland, OH). *American Institute of Aeronautics and Astronautics, Aeroacoustics Conference, 7th, Palo Alto, CA, Oct. 5-7, 1981, Paper 81-1991.* 33 p. 13 refs.

A semi-empirical model for predicting the noise generated by conventional-velocity-profile jets exhausting from coaxial nozzles is presented and compared with small-scale static and simulated flight data. The present method is an updated version of that part of the original NASA Aircraft Noise Prediction (ANOP) Program (1974) relating to coaxial jet noise. That method has been shown to agree reasonably well with model and full-scale experimental data except at high jet velocities in the region near the jet axis. Improvements to the basic circular jet noise prediction have been developed since that time which improve the accuracy, especially at high jet velocity and near the jet axis, and are incorporated into the coaxial jet procedure in this paper. The new procedure is more theoretically based and has also been improved by some empirical adjustments. (Author)

A81-49877 **Aircraft electricity and electronics /3rd edition/.** R. D. Bent and J. L. McKinley. New York, McGraw-Hill Book Co., 1981. 365 p. $16.95.

Fundamentals of electricity are considered along with magnetism and electromagnetism, capacitors and inductors, alternating current, and electric measuring instruments. Batteries are examined, taking into account voltaic cells, alkaline cells, nickel-cadmium cells, the theory of the lead-acid cell, aspects of lead-acid battery construction, battery design features, nickel-cadmium storage batteries, and a troubleshooting chart for nickel-cadmium batteries. A description is presented of generator theory, dc generators and controls, electric motors, the installation and maintenance of electrical systems, the principles of electronics, radio transmitters and receivers, electric instruments, and electronic control systems. Other topics considered are related to weather warning systems, communication and navigation systems, and automatic pilots and landing systems. Attention is given to radar, interphone communications, the passenger address and entertainment system, a high-frequency communication system, a Selcal decoder, Federal Communications Commission regulations, automatic direction-finder systems, the instrument-landing system, the microwave landing system, TACAN, long-range navigation systems, and an inertial navigation system. G.R.

A81-49900 # **Model following control of gas turbine engines.** R. V. Monopoli (Massachusetts, University, Amherst, MA). *ASME, Transactions, Journal of Dynamic Systems, Measurement, and Control,* vol. 103, Sept. 1981, p. 285-289. 18 refs. Research supported by the United Technologies Corp.

A technique, which is based on Liapunov's direct method (Kalman and Bertram, 1960), is described for designing a control system for a nonlinear gas turbine engine. The technique proceeds to the derivation of the control input directly from the nonlinear, time-varying differential equations, rather than from a linearized version of the engine dynamics. The control system resulting from this approach forces certain engine variables to track the corresponding variables of an ideal model of the engine specified by the designer. A brief description of the theory is presented, and the structure of the model is described. Application of the technique to a gas turbine engine is illustrated, using a full nonlinear digital simulation of a representative advanced technology engine. Simulation results are presented and include data indicating the performance achieved when the control algorithm was used. K.S.

A81-49928 # **The use of direct lift control of an aircraft in a guided landing run (Ob ispol'zovanii nepostredstvennogo upravleniia pod'emnoi siloi samoleta v rezhime direktornogo zakhoda na posadku).** O. Iu. Alasheev, V. D. Osorgin, V. G. Pavlov, L. A. Semakov, and N. L. Sokolov. *Aviatsionnaia Tekhnika,* no. 2, 1981, p. 13-18. 7 refs. In Russian.

The paper examines the possibility of using direct lift control to reduce the control time of the guided landing run under the condition that a satisfactory quality of the transient process be maintained. The synthesis of the guided control system is described in detail, and the precision of the technique under consideration is examined. B.J.

A81-49930 # **The effect of the skewness of the skin panels on stresses in conical wings (Vliianie nepriamougol'nosti panelei obshivki na napriazheniia v konusnykh kryl'iakh).** M. B. Vakhitov and L. M. Koniukhova. *Aviatsionnaia Tekhnika,* no. 2, 1981, p. 22-27. 9 refs. In Russian.

A theoretical study is presented of the effect of additional normal stresses, arising in the case of the shear of skewed skin panels, on the stressed state of a conical wing. A discrete-continuum model is used to obtain a system of integrodifferential equations which are solved by the method of integrating matrices. B.J.

A81-49935 # **Geometrically nonlinear theory for calculating thin rods of a wing profile (Geometricheski nelineinaia teoriia rascheta tonkikh sterzhnei kryl'evogo profilia).** V. A. Pavlov. *Aviatsionnaia Tekhnika,* no. 2, 1981, p. 44-50. 11 refs. In Russian.

The paper develops a theory of strength calculations of thin rectilinear rods of a wing profile of invariant cross-section shape; the spatial displacements of these rods are commensurable with their transverse dimensions. Deformations in local axes of rod elements are determined by generalized Kirchhoff-Klebsch relations. B.J.

A81-49937 # **Strength calculation of thin-wall rods of significant taper (Raschet na prochnost' tonkostennykh sterzhnei znachitel'nogo suzheniia).** V. G. Shataev. *Aviatsionnaia Tekhnika,* no. 2, 1981, p. 55-60. 7 refs. In Russian.

The paper examines a thin-wall cantilever beam structure consisting of longitudinal ribs connected by skin panels and transverse diaphragms. General equations are obtained for calculating the strength of this structure, with allowance for nonuniform heating, plastic deformation, and creep in the case of considerable taper. The physically nonlinear problem is reduced to a succession of linear problems by the use of the method of fictitious loads, secants, and tangential moduli. B.J.

A81-49943 # **Realization of a method of extremal targeting in a problem of aircraft landing control (O realizatsii metoda ekstremal'nogo pritselivaniia v zadache upravleniia samoletom na posadke).** V. M. Kein, A. N. Parikov, and M. Iu. Smurov. *Aviatsionnaia Tekhnika,* no. 2, 1981, p. 79-82. In Russian.

An algorithm is developed for aircraft terminal guidance which realizes the method of extremal targeting. The proposed algorithm was tested by a simulation of aircraft landing control in the case of extremal disturbances. The algorithm is found to satisfy prescribed speed and memory requirements. B.J.

A81-49946 # **Choice of the optimal angular velocity of the twist of a flight vehicle (O vybore optimal'noi uglovoi skorosti zakrutki letatel'nogo apparata).** O. A. Privarnikov. *Aviatsionnaia Tekhnika,* no. 2, 1981, p. 102-104. In Russian.

During the twist of a flight vehicle, i.e., a rocket, relative to the longitudinal axis at the moment of separation from the booster, the rocket retains its orientation in the extraatmospheric part of the trajectory if the angular velocity of the twist considerably exceeds the transverse components of velocity. This paper considers the selection of the optimal twist velocity on the basis of minimum total deviation in range. B.J.

A81-49948 # **Calculation of the aerodynamic characteristics of a deformable wing, moving near a screen (K raschetu nelineinykh aerodinamicheskikh kharakteristik deformiruemogo kryla, dvizhushchegosia vblizi ekrana).** L. G. Tsvetkov. *Aviatsionnaia Tekhnika,* no. 2, 1981, p. 107-111. In Russian.

A theoretical study is presented of the motion of a thin wing at low subsonic velocity near a screen for low rates and amplitudes of the change of the kinematic parameters and deformation of the lifting surface. Particular attention is given to the effect of the three-dimensional motion on the formation of a vortex sheet behind the wing. B.J.

A81-49949 # **Hydrogen engines (Dvigateli na vodorode).** V. P. Barmin (Moskovskoe Vysshee Tekhnicheskoe Uchilishche, Moscow, USSR), I. L. Varshavskii, and V. V. Goncharov (Akademiia Nauk SSSR, Institut Mashinovedeniia, Moscow, USSR). *Priroda,* Sept. 1981, p. 22-29. In Russian.

The development of internal combustion engines fueled by hydrogen or hydrogen mixtures is reviewed. The first systematic investigations in the 1920s of a one-cylinder engine with variable compression ratio, which demonstrated the possibility of qualitatively regulated hydrogen combustion at any range of loading, resulting in a greater engine efficiency, is discussed, and problems of premature ignition encountered due to the use of pure hydrogen fuel are noted along with a possible solution in the use of a special injector for the direct delivery of the hydrogen to the cylinder which, however, leads to strong knocking. Attention is then given to work begun in 1974 on an experimental one-cylinder hydrogen-air engine with various degrees of compression and hydrogen supplied from ferrosilicon and water, the improvement of gasoline engine operating efficiency by 5-10% additions of hydrogen, hydrogen addition to diesel fuels, and hydrogen addition to improve the carbon monoxide, hydrocarbon and NO(x) emissions levels of aircraft gas turbine engines. A.L.W.

A81-49973 **Civil head-up displays - Coming up fast.** M. Lambert. *Interavia,* vol. 36, Oct. 1981, p. 984, 985.

A survey is made of operational experience to date with partial head-up display (HUD) systems installed in commercial aircraft. Attention is given these systems' certification for Category 3 operation. The systems described are the WGD 1, which is in service aboard A300 and 737-200 aircraft; the visual approach monitor (VAM), allowing ground-roll guidance in visibilities as low as 75 m; and the 193M electromechanical HUD for Mercure aircraft. Emphasis is given a recent HUD design, intended for DC-9 Super 80 airliners, which may be used during landing and take-off ground roll, climb, cruise, descent, instrument landing system approach, visual approach, and go-around. This HUD contains symbols indicating the autopilot's maneuvering capability in relation to the approach path, the phase of the approach, and the autopilot mode state. O.C.

A81-49974 **Sukhoi Su-24 Fencer - The Soviet Tornado.** G. Lafon. *Interavia,* vol. 36, Oct. 1981, p. 997-999.

Dimensional data and operational capabilities are deduced from photographs of the Soviet Su-24 Fencer interdiction/attack aircraft and from extrapolation of the characteristics of such comparable NATO aircraft as the F-111 and Tornado. After an examination of (1) the design's basic characteristics in light of the aerodynamic principles and structural requirements of low-level, high subsonic speed penetration missions, (2) the aerodynamic advantages and penalties of the large glove-area, variable incidence wing, and (3) the propulsion system difficulties resulting from deep, narrow air intakes intended to minimize radar cross-section, it is concluded that the Fencer is constrained to the interdiction strike mission, with little advantage at the high angles of incidence called for by air-to-air combat. In this, the Fencer compares unfavorably with the more versatile F-111 and Tornado. O.C.

A81-49975 **The Lear Fan 2100.** J. P. Geddes and D. Wood. *Interavia,* vol. 36, Oct. 1981, p. 1029-1033.

The structural, aerodynamic and propulsion system design features of the Lear Fan 2100 turboprop aircraft are described. The design incorporates two 850 shp turboshaft engines driving a four-bladed pusher propeller through a single transmission. Attention is given the all-graphite/epoxy composite construction of the fuselage and wings, designed for a 15,000-hour service life at high loads and 15,000 cabin pressure cycles, with a safety factor of 2.0 rather than the customary 1.5. Despite the novel materials employed, the structure is of a conventional, semimonocoque design that employs the stringers and frames of aluminum alloy aircraft. Also considered is the joint financing of the aircraft's development program by entrepreneurs and the British government, and the establishment of construction facilities in Northern Ireland. O.C.

A81-49979

ASME, Joint Propulsion Conference, 17th, Colorado Springs, CO, July 27-29, 1981, AIAA Paper 81-1358. 13 p. 5 refs.

Two composite applications for the augmentor and nozzle section of advanced military gas turbine engines were designed, fabricated and tested to determine the cost and weight savings potential and to demonstrate the viability of using organic matrix composites as substitues for sheet metal titanium structures. One of these components, the external nozzle flap, is currently undergoing flight service testing and may be considered for incorporation into the engine bill-of-material. Design approaches, configuration constraints, fabrication methods, and component test results are presented. (Author)

A81-49979 # **Comparison of computational and experimental jet effects.** J. L. Jacocks, W. L. Peters, and F. C. Guyton (ARO, Inc., Arnold Air Force Station, TN). *AIAA, SAE, and ASME, Joint Propulsion Conference, 17th, Colorado Springs, CO July 27-29, 1981, AIAA Paper 81-1492*. 9 p. 11 refs.

Computations were made for transonic flow over a nozzle afterbody with a real plume. The effects of parameters such as nozzle pressure ratio, plume stagnation temperature, and interior nozzle shape on afterbody drag were quantified and compared with available experimental data. Remarkable agreement between the computational and experimental results is demonstrated, including the drag minimum associated with low nozzle pressure ratios and the absolute dependence of drag on temperature. The computer program used for the calculations is an axisymmetric modification of Diewert's planar Navier-Stokes program and utilizes a mixed explicit-implicit MacCormack algorithm with an algebraic turbulence model. WIND-TUNNEL STUDIES OF ADVANCED CARGO AIRCRAFT CONCEPTS Final Report, 22 Jun. 1979 - 21 Jun. 1980
D. M. Rao and G. L. Goglia Sep. 1981 17 p refs
(NCC1-9)
(NASA-CR-164833) Avail: NTIS HC A02/MF A01 CSCL 01A

Accomplishments in vortex flap research are summarized. A singular feature of the vortex flap is that, throughout the range of angle of attack range, the flow type remains qualitatively unchanged. Accordingly, no large or sudden change in the aerodynamic characteristics, as happens when forcibly maintained attached flow suddenly reverts to separation, will occur with the vortex flap. Typical wind tunnel test data are presented which show the drag reduction potential of the vortex flap concept applied to a supersonic cruise airplane configuration. The new technology offers a means of aerodynamically augmenting roll-control effectiveness on slender wings at higher angles of attack by manipulating the vortex flow generated from leading edge separation. The proposed manipulator takes the form of a flap hinged at or close to the leading edge, normally retracted flush with the wing upper surface to conform to the airfoil shape. A.R.H.

ON THE SPANWISE UNIFORMITY OF WIND TUNNEL TEST DATA OF TRANSONIC AIRFOILS
Tadashi Ito, Kooichi Suzuki, and Nobuhiko Kamiya 1981 46 p refs In JAPANESE; ENGLISH summary
(NAL-TR-665; ISSN-0389-4010) Avail: NTIS HC A03/MF A01

For flows of free stream Mach numbers below the drag divergence Mach number, the spanwise uniformity of the section drag coefficient is good in the region around the center section. Although the spanwise uniformity is bad for flows of freestream Mach numbers above that, the drag divergence Mach number can be obtained accurately. In order to improve the spanwise uniformity of the section drag coefficient, it would be necessary to survey the wake at a station close to the trailing edge rather than at a station 1-3 chords downstream of the trailing edge, as was done in this experiment. The spanwise uniformity of pressure distribution and of section lift coefficient is fairly good in the region around the center section. The spanwise uniformity is better at Mach numbers below M sub CD than at Mach numbers above M sub CD. T.M.

EFFECT OF SWEEP AND ASPECT RATIO ON THE LONGITUDINAL AERODYNAMICS OF A SPANLOADER WING IN AND OUT OF GROUND EFFECT
Scott O. Kjelgaard and John W. Paulson, Jr. Jun. 1981 166 p refs Revised
(NASA-TM-80199) Avail: NTIS HC A08/MF A01 CSCL 01A

A wind tunnel investigation was conducted in the Langley 4 by 7 meter tunnel to determine the effects of leading edge sweep, aspect ratio, flap deflection, and elevon deflection on the longitudinal aerodynamic characteristics of a span distributed load advanced cargo aircraft (spanloader). Model configurations consisted of leading edge sweeps of 0, 15, 30 and 45 deg and aspect ratios of approximately 2, 4, 6, and 8. Data were obtained for angles of attack of -8 to 18 deg out of ground effect and at angles of attack of -2, 0, and 2 deg in ground effect at Mach number equal 0.14. Flap and elevon deflections ranged from -20 to 20 deg. The data are represented in tabulated form. M.G.

PROGRAM OF RESEARCH IN LAMINAR FLOW CONTROL IN THE JIAFS AT NASA LANGLEY RESEARCH CENTER Status Report, 1 Jan. - 30 Jun. 1981
W. Pfenninger 30 Jul. 1981 15 p ref
(Grant NsG-1585)
(NASA-CR-164843) Avail: NTIS HC A02/MF A01 CSCL 01C

At high Reynolds numbers, the performance of a low drag suction LFC airplane is essentially controlled by the induced drag and the turbulent friction drag of the nonlaminarized area. The question then arises as to how the airplane cruise lift to drag ratio (L/D) sub cruise) cruise increases with increasing extent of laminar flow 0 sub lam/0 sub total (0 = airplane wetted area). In particular, the question arises as to the airplane performance in the optimum case with all laminar flow over the airplane wetted area. Design approaches of all laminar flow LFC airplanes which optimize the airplane range R = eta sub ov times (L/D) times H times lambda n(W sub 0/W sub E) are considered. A.R.H.

STING INTERFERENCE EFFECTS ON THE STATIC DYNAMIC AND BASE PRESSURE MEASUREMENTS OF THE STANDARD DYNAMICS MODEL AIRCRAFT AT MACH NUMBERS 0.3 THROUGH 1.3 Final Report, Jun. - Dec. 1980
Fred B. Cyran AEDC Aug. 1981 66 p refs Sponsored by the AF
(AD-A102612; AEDC-TR-81-3) Avail: NTIS HC A04/MF A01 CSCL 20/4

Wind tunnel tests were conducted in the Arnold Engineering Development Center (AEDC) Propulsion Wind Tunnel Facility (PWT) to provide sting-support interference information for planning and directing wind tunnel tests at subsonic and transonic Mach numbers. Sting length and diameter effects on static and dynamic stability derivatives, static pitching moments, and base pressure of the Standard Dynamics Model (SDM) were investigated at Mach numbers from 0.3 to 1.3. Dynamic stability derivatives were obtained at a nominal frequency of 5.2 Hz, at amplitudes of 1.0, 1.5, and 2.0 deg. Pitch and yaw data were both obtained as a function of angle of attack. Previously unpublished static force and moment data for the SDM are also presented. The results showed that interference related to sting length was most pronounced at Mach number 0.95 for all measurements; the results also showed significant effects at Mach numbers 1.1 and 1.3 for yaw damping. Substantial sting diameter effects were observed at Mach number 0.3 for pitch damping and at Mach number 1.3 for yaw damping. Both sting length and diameter effects were found in base-pressure measurements at most Mach numbers. Author (GRA)

INVESTIGATION OF THE CIRCULATION CONTROL WING/UPPER SURFACE BLOWING HIGH-LIFT SYSTEM ON A LOW ASPECT RATIO SEMISPAN MODEL Final Report, Aug. - Sep. 1980
Michael J. Harris May 1981 85 p refs
(WF41421000)
(AD-A103090; DTNSRDC/ASED-81/10) Avail: NTIS HC A05/MF A01 CSCL 20/4

The results from one in a series of investigations undertaken to develop the Circulation Control Wing/Upper Surface Blowing (CCW/USB) high-lift concept are presented. Included are: isolation of propulsion jet turning, effects of tip devices, and thrust reversing. As evaluated, the concept employs a modified supercritical wing with a 3.6-percent chord circular trailing edge and tangential blowing from a thin, full-span slot over this trailing edge. In addition, turbofans are mounted over the wing so that the exhaust scrubs the upper surface of the wing and is turned by the trailing edge. Unlike other upper surface blowing concepts, thrust deflection is accomplished by entraining the propulsive jet with tangential blowing around the trailing edge. The propulsive-induced lift enhances the proven high lift of the circulation control wing. For a thrust coefficient of 3.76, a tangential blowing coefficient of 0.24, and an angle of attack of 16 deg, the low aspect ratio model produced an untrimmed lift coefficient of 6.5. The system also demonstrated the capability to be used as an effective thrust reverser for deceleration during the landing ground roll. Author (GRA)

PROCEDURAL HANDBOOK FOR ESCAPE SYSTEM/ ACCIDENT INVESTIGATION HELMET USAGE ASPECTS, INCLUDING FAILURE ANALYSIS Final Report
Robert Snyder 20 May 1981 21 p
(AD-A102803; NADC-81066-60) Avail: NTIS HC A02/MF A01 CSCL 06/7

Aircrew protective helmets are currently developed to reduce the severity of head impact injuries. Many helmets involved in ejections and land and water crashes may provide clues concerning the sequence of events immediately prior to and/or during the accident. Helmet design may have been a factor in the serious and sometimes fatal injuries sustained during these accidents. This handbook will describe a systematic analysis of aircrewman's helmets involved in accidents or ejections. This analysis may identify and recognize design weaknesses and result in the initiation of appropriate effective remedial action. Author (GRA)

A FULL-SCALE WIND TUNNEL INVESTIGATION OF A HELICOPTER BEARINGLESS MAIN ROTOR
William Warmbrodt and John L. McCloud, II Aug. 1981 287 p
(NASA-TM-81321; A-8696) Avail: NTIS HC A13/MF A01 CSCL 01C

A helicopter bearingless main rotor was tested. Areas of investigation included aeroelastic stability, aerodynamic performance, and rotor loads as a function of collective pitch setting, RPM, airspeed and shaft angle. The rotor/support system was tested with the wind tunnel balance dampers installed and, subsequently, removed. Modifications to the rotor hub were tested. These included a reduction in the rotor control system stiffness and increased flexbeam structural damping. The primary objective of the test was to determine aeroelastic stability of the fundamental flexbeam/blade chordwise bending mode. The rotor was stable for all conditions. Damping of the rotor chordwise bending mode increases with increased collective pitch angle at constant operating conditions. No significant decrease in rotor damping occured due to frequency coalescence between the blade chordwise fundamental bending mode and the support system. R.C.T.

SOLAR POWERED AIRCRAFT Patent Application
William H. Phillips, inventor (to NASA) Filed 15 May 1981 12 p
(NASA-Case-LAR-12615-1; US-Patent-Appl-SN-263829) Avail: NTIS HC A02/MF A01 CSCL 01C

A cruciform wing structure for a solar powered aircraft is described. Solar cells are mounted on horizontal wing surfaces. Wing surfaces with spanwise axis perpendicular to the horizontal surfaces maintain these surfaces normal to the Sun line by allowing the aircraft to be flown in a controlled pattern at a large bank angle. The solar airplane may be of conventional design with respect to fuselage, propeller and tail, or may be constructed around a core and driven by propeller mechanisms attached near the tips of the airfoils. CAPTIVE AIRCRAFT TESTING AT HIGH ANGLES OF ATTACK Final Report, Oct. 1976 - Sep. 1978
R. W. Butler and J. P. Christopher AEDC Aug. 1981 42 p refs
(AD-A103108; AEDC-TR-80-60) Avail: NTIS HC A03/MF A01 CSCL 20/4

A captive testing technique capable of simulating aircraft maneuvers at high angles of attack has been developed and tested in the Aerodynamic Tunnel 16T of the Arnold Engineering Development Center (AEDC). The captive technique uses a closed loop system between wind tunnel, model, and computer. Use of the wind tunnel as an analog forcing function eliminates the requirement for a conventional static data matrix in motion simulation. Various high angle-of-attack maneuvers (rudder roll, aileron roll, wind-up turn, etc.) were generated with the captive system and show good correlation with flight data. Author (GRA)

TWIN-ROTOR PATROL AIRSHIP FLYING MODEL DESIGN RATIONALE
John A. Eney 1 Jun. 1981 14 p
(AD-A102575; NADC-81165-60) Avail: NTIS HC A02/MF A01 CSCL 01/3

To gain experimental data on the controllability of tilt-rotor airships operating near neutral buoyancy, a 32-foot long 1/10 scale flying model is being developed using two contrarotating tilt-rotor representing those on the NASA/Bell XV-15 research aircraft. It is planned to demonstrate controlled hover and transition in an engine - out condition with one rotor stopped to emphasize the natural attitude stability and damping of such vehicles. DEVELOPMENT OF AN AIRCRAFT MANEUVER LOAD SPECTRUM BASED ON VGH DATA Final Report
John W. Lincoln Jul. 1980 90 p
(AD-A102750; ASD-TR-80-5037) Avail: NTIS HC A05/MF A01 CSCL 01/3

This report describes a procedure whereby a full scale aircraft maneuver load fatigue spectrum can be developed from recorded VGH data. It is assumed in this development that the internal loads (stresses) at the appropriate control points are available for combinations of velocity, load factor, altitudes and weight so that an interpolation on these points will provide the desired accuracy. The procedure will generate (for a control point) the cumulative probability of exceeding a given stress, exceedances per hour of a given stress level, the probability density function for stress and the stress spectrum. The aircraft spectrum is derived from the assumption that the aircraft test loads derived from a linear combination of balanced loading conditions will provide a good simulation of the stress history at and 'between' the control points. The application of the program to new designs (mission analysis) and to tracking can be made without modification. The computer program for this calculation is included along with a sample problem. As an example of an application of this program, the stress exceedance functions for a control point on the wing of the F-4 are shown that were computed from the VGH data accumulated over a period of one year. COST BENEFIT AND FAILURE CRITICALITY ANALYSES OF THE STANDARD AVIONICS INTEGRATED CONTROL SYSTEM (SAICS) CONCEPT
E. Straub, D. Godwin, and A. Savisaar Jun. 1981 129 p
(Contract F04606-79-G-0082; AF Proj. 2257)
(AD-A102197; Rept-2258-02-1-2439) Avail: NTIS HC A07/MF A01 CSCL 09/5

This document reports on the existing individual and integrated avionics cockpit controls of contemporary aircraft. Through failure-criticality and cost-benefit analyses, it examines the potential of a Standard Avionics Integrated Control System (SAICS) as a replacement for existing individual controls. The report provides information on existing individual cockpit avionics control mean times between failures (MTBFs), costs, weights, and sizes. It also provides MTBF, cost, space, and weight estimates for a unique integrated control, a standard avionics integrated control, and a manual back-up control panel for both. The study addresses primarily hardware, not software, and places emphasis on avionics control rather than display. It is assumed that installation of a SAICS would begin in five candidate tactical aircraft some time after 1985. Author (GRA)

DESIGN AND EVALUATION OF AN INTEGRATED QUIET, CLEAN GENERAL AVIATION TURBOFAN (QCGAT) ENGINE AND AIRCRAFT PROPULSION SYSTEM Contractor Report, Dec. 1976 - Apr. 1980
Jon German, P. Fogel, and C. Wilson Apr. 1980 226 p refs
(Contract NAS3-20584)
(NASA-CR-165185; LYC-80-27) Avail: NTIS HC A11/MF A01 CSCL 21E

The design was based on the LTS-101 engine family for the core engine. A high bypass fan design (BPR = 9.4) was incorporated to provide reduced fuel consumption for the design mission. All acoustic and pollutant emissions goals were achieved. A discussion of the preliminary design of a business jet suitable for the developed propulsion system is included. It is concluded that large engine technology can be successfully applied to small turbofans, and noise or pollutant levels need not be constraints for the design of future small general aviation turbofan engines. UNSTEADY SWIRLING FLOWS IN GAS TURBINES Annual Technical Report, 1 Apr. 1980 - 30 Jun. 1981
M. Kurosaka Jun. 1981 51 p
(Contract F49620-78-C-0045; AF Proj. 2307)
(AD-A102852; AFOSR-81-0608TR) Avail: NTIS HC A04/MF A01 CSCL 21/5

This annual report covers the second phase of investigations into the unsteady swirling flows. The overall objective of the entire program is to acquire fundamental understanding of a phenomenon characterized by violent fluctuations occurring in swirling flows in gas turbines; this flow instability, dubbed here as 'Vortex Whistle' is known to be capable of causing severe fatigue failure in gas turbine components. Although the phenomena of 'Vortex Whistle' have never remained unrecognized, perhaps for the reason that they appeared in seemingly unrelated incidents under various disguise, no comprehensive investigation appears to have been embarked upon. In addition, in spite of the fact that the vortex whistle is a pure tone noise and distinctly audible, its role as a source of aircraft engine noise has never been recognized. Furthermore, when the vortex whistle becomes intense, it induces a change in the steady flow field, the total temperature being spontaneously separated in the radial direction (the Ranque-Hilsch effect). Not only its implications to the study aero design of turbomachines are of obvious importance, but also this appears to offer an unmistakable clue to the puzzling Ranque-Hilsch effect. GRA

FLIGHT EVALUATION OF THE STOL FLARE AND LANDING DURING NIGHT OPERATIONS
James A. Franklin, Robert C. Innis, and Gordon H. Hardy Aug. 1981 46 p refs
(NASA-TM-81312; A-8704) Avail: NTIS HC A03/MF A01 CSCL 01C

Simulated instrument approaches were made to Category 1 minimums followed by a visual landing on a 100 x 1700 ft STOL runway. Data were obtained for variations in the aircraft's flare response characteristics and control techniques and for different combinations of aircraft and runway lighting and a visual approach slope indication. With the complete aircraft and runway lighting and visual guidance no degradation in flying qualities or landing performance was observed compared to daylight operations. elimination of the touchdown zone floodlights or the aircraft landing lights led to somewhat greater pilot workload; however, the landing could still be accomplished successfully. Loss of both touchdown zone and aircraft landing lights led to a high workload situation and only a marginally adequate to inadequate landing capability. T.M.

TWO-DIMENSIONAL DYNAMIC STALL AS SIMULATED IN A VARYING FREESTREAM
G. Alvin Pierce, Donald L. Kunz, and John B. Malone 1978 67 p refs
(Grant NGR-11-002-185)
(NASA-CR-164829) Avail: NTIS HC A04/MF A01 CSCL 14B

A low speed wind tunnel equipped with a axial gust generator to simulate the aerodynamic environment of a helicopter rotor was used to study the dynamic stall of a pitching blade in an effort to ascertain to what extent harmonic velocity perturbations in the freestream affect dynamic stall. The aerodynamic moment on a two dimensional, pitching blade model in both constant and pulsating airstream was measured. An operational analog computer was used to perform on-line data reduction and plots of moment versus angle of attack and work done by the moment were obtained. The data taken in the varying freestream were then compared to constant freestream data and to the results of two analytical methods. These comparisons show that the velocity perturbations have a significant effect on the pitching moment which can not be consistently predicted by the analytical methods, but had no drastic effect on the blade stability. A.R.H.

SUPPLEMENTAL CALIBRATION OF THE AEDC-PWT 16 FT TRANSONIC TUNNEL AERODYNAMIC TEST SECTION Final Report, Dec. 1979 - Jun. 1980
M. L. Mills AEDC Jul. 1981 109 p refs Sponsored by the AF
(AD-A102384; AEDC-TR-80-32) Avail: NTIS HC A06/MF A01 CSCL 14/2

A test was conducted in the Propulsion Wind Tunnel (16T) to: (1) define the effect of plenum suction utilization on the tunnel calibration and power consumption at free-stream Mach numbers less than 0.75, (2) improve the centerline Mach number calibration at supersonic Mach numbers, (3) correlate the test section centerline Mach number with the tunnel nozzle Mach number, and (4) investigate the effect of tunnel humidity on the calibration. Data were acquired for Mach numbers from 0.6 to 1.6 at total pressures from 400 to 3,200 psfa. The calibration was conducted in the aerodynamic test section using a centerline pipe and wall pressure orifices to define the Mach number distributions. The results of an evaluation of alternate methods of calibration indicated that the current method is the most acceptable. Slightly changing the tunnel nozzle to eliminate the disturbances in the flow at supersonic Mach numbers indicated the need to investigate the entire nozzle system. Comparison of this calibration with previous calibration results indicates that a revision of the current tunnel calibration is not necessary.

LIME-STABILIZED NATIVE SOIL AS BASE COURSE FOR LIGHT AIRCRAFT PAVEMENT Final Report, Feb. 1978 - Apr. 1981
Robert B. Brownie Apr. 1981 130 p refs
(Contract DOT-FA78WAI-834)
(AD-A102196; FAA-RD-80-112) Avail: NTIS HC A07/MF A01 CSCL 13/2

Present Federal Aviation Administration policy does not recommend the use of lime stabilized soil as base course for airport pavements. The potential savings in cost and materials by using this type of construction for light duty airport pavements (aircraft gross weights less than 30,000 lbs) led to the use of lime stabilized native soil in place of other base course materials at three airports in the Southwestern United States. Those airports are located at Chino, California, Big Bear Lake, California, and Payson, Arizona. The compositions of those base courses were determined by laboratory analyses of core borings and soil samples. Visual condition surveys were performed, and surface deflections under load were measured. Climatological data and aircraft traffic histories were obtained. All of those factors and the performance of the pavements were analyzed, and a suggested specification was prepared for constructing lime stabilized base courses. GRA

N81-32158# Pacer Systems, Inc., Arlington, Va.
DEVELOPMENT OF A HELIPORT CLASSIFICATION METHOD AND AN ANALYSIS OF HELIPORT REAL ESTATE AND AIRSPACE REQUIREMENTS Final Report, Jan. - Jun. 1981
F. D. Smith and A. G. DeLucien Jun. 1981 100 p refs
(Contract DOT-FA01-80-C-10080)
(AD-A102521; PAR-018-81; FAA-RD-81-35) Avail: NTIS HC A05/MF A01 CSCL 01/5

A helicopter performance related heliport classification method is developed which accommodates an applicable range of operating conditions and factors which impact helicopter performance. Dimensional values for use in planning both real estate and airspace surfaces are determined for application to the identified heliport classifications. Those values are incorporated into generalized guidelines for heliport planners to meet site-specific and non-standard operational conditions. Requirements for flight manual performance charts and published heliport information are also identified. Author (GRA)

DATA ACQUISITION AND ANALYSIS SYSTEM AS A TRAINING DEVICE FOR SIMULATED CONVENTIONAL WEAPON DELIVERY
C. F. G. M. Hofman and J. Batenburg (Royal Netherlands Air Force) 24 Jun. 1980 13 p refs Presented at AGARD Symp. on Subsystem Testing and Flight Test Instr., Geilo, Norway, 27-30 Oct. 1980 and at 2nd Interserv./Ind. Training Equipment Conf., Salt Lake City, 18-20 Nov. 1980
(NLR-MP-80027-U) Avail: NTIS HC A02/MF A01

The system, based on a photogrammetric method, yields release conditions, the nominal weapon impact position and the weapon time of flight. Simulated attacks on a great variety of realistic targets can be evaluated and validated as there is no need to drop training weapons. No ground-based instrumentation in the target area is needed. The system consisting of an airborne data acquisition system installed in the aircraft and a ground-based processing and analysis system at the airbase allows a debriefing of the pilot within half an hour after completion of the mission. Circular error probable during flight tests with a variety of weapons compared well with predictions. Airworthiness evaluations shows the equipment to be reliable and having no adverse effect on handling. Author (ESA)

WATER-COMPATIBLE POLYMER CONCRETE MATERIALS FOR USE IN RAPID REPAIR SYSTEMS FOR AIRPORT RUNWAYS Final Report
T. Sugama, L. E. Kukacka, and W. Horn Mar. 1981 129 p refs
(Grant AFOSR ISSA 80-00027; AF Proj. 2307)
(AD-A102873; BNL-51390; AFOSR-81-0589TR) Avail: NTIS HC A07/MF A01 CSCL 01/5

Water-compatible polymer concrete (PC) formulations have been developed which appear to have potential for use in all-weather rapid repair procedures for bomb-damaged runways. Formulations consisting of furfuryl alcohol, water-saturated aggregate, dry silica flour, promoters, and catalysts produced composites with properties suitable for repair purposes when mixed and polymerized at temperatures from -20 to 30 C. Calcium-unsaturated polyester complexed PC also produced excellent properties. However, the early strength criteria, (2000 psi (13.78 MPa) at 1 hr) and other requirements such as compatibility of the formulation with water and practical working times could be attained only at temperatures >20 deg C. This system can be polymerized under water. Studies of the polymerization reaction mechanisms, materials properties, costs, and potential placement methods were performed. Author (GRA)

ULTRASONIC DISPERSION OF PARTICULATE HIGH DENSITY FUELS Final Report, Sep. 1979 - Sep. 1980
Wright-Patterson AFB, Ohio AFWAL May 1981 44 p
(Contract F33615-79-C-2090; AF Proj. 3048)
(AD-A102771; AFWAL-TR-81-2033) Avail: NTIS HC A03/MF A01 CSCL 21/4

The high energy-density slurry fuels being developed to increase missile range may present settling and gelation problems in use. This project was performed to demonstrate ultrasonic dispersion techniques, with the goal of deagglomerating to more uniform, smaller particle-size solids distribution and increased storage stability. Batch and continuous process laboratory-type arrays were used at various power levels (nominal 200 to 1000 watts), on carbon and boron/JP-10 slurries of interest to the Air Force. Analytical techniques, difficult with the particulate sizes involved (down to the 300-millimicron range), showed some measure of ultrasonic deagglomeration, which increased with increasing ultrasonic energy densities, and complete stability of the 60-day-storage activated samples, in contrast to the non-activated control samples. Extended analysis might better quantify ultrasonic effect, but combustion tests could directly identify performance benefits. GRA

THE USE OF ACOUSTIC EMISSION FOR DETECTION OF ACTIVE CORROSION AND DEGRADED ADHESIVE BONDING IN AIRCRAFT STRUCTURE

John Rodgers and Steven Moore Nov. 1975 16 p refs
(AD-A102923; Paper-14) Avail: NTIS HC A02/MF A01 CSCL 01/3

Procedures have been developed by engineers at Sacramento Air Logistics Center to detect active corrosion in aluminum structure and moisture-degraded adhesive bonding in composite honeycomb using acoustic emission monitoring. Simple heating methods employing a hot air gun or heat lamp are used to increase emission from active corrosion sources, and to create the stresses necessary to break moisture-degraded adhesive bonds. Corrosion detection in aluminum skin and honeycomb core has proven very successful. Detection of moisture-degraded bonding between aluminum skin and phenolic core on the F-111 vertical stabilizer leading edge has been substantially improved and simplified. Acoustic emission is replacing X-ray and ultrasonic inspection procedures in these applications, with direct benefits realized in a 75% reduction of inspection time and costs, fewer work flow interruptions, and better defect area definition.

FORECAST OF FUTURE AVIATION FUELS: THE MODEL Final Report

M. B. Ayati, C. Y. Liu, and J. M. English Sep. 1981 192 p refs
(Contract NsG-3116)
(NASA-CR-165486; UCLA-eng-8037) Avail: NTIS HC A09/MF A01 CSCL 12B

A conceptual models of the commercial air transportation industry is developed which can be used to predict trends in economics, demand, and consumption. The methodology is based on digraph theory, which considers the interaction of variables and propagation of changes. Air transportation economics are treated by examination of major variables, their relationships, historic trends, and calculation of regression coefficients. A description of the modeling technique and a compilation of historic airline industry statistics used to determine interaction coefficients are included. Results of model validations show negligible difference between actual and projected values over the twenty-eight year period of 1959 to 1976. A limited application of the method presents forecasts of air transportation industry demand, growth, revenue, costs, and fuel consumption to 2020 for two scenarios of future economic growth and energy consumption.

USER'S MANUAL FOR A COMPUTER PROGRAM TO CALCULATE DISCRETE FREQUENCY NOISE OF CONVENTIONAL AND ADVANCED PROPELLERS

R. M. Martin and F. Farassat Aug. 1981 90 p refs
(NASA-TM-83135; L-14374) Avail: NTIS HC A05/MF A01 CSCL 20A

A user's manual is presented for a computer program for the calculation of discrete frequency noise of conventional and advanced propellers. The structure of the program and the subroutines describing the input functions are discussed. Input variables and their default values and the variables in the output data sheet are defined. Two versions of the program are available. These differ only in the graphic output capability. One version has only printed output capability. A second version with extensive graphic output capability is available for the computer system at Langley. This Manual includes four detailed examples of both the printed and graphic outputs. These examples may be reproduced by users to check their code on their computer system.

DESIGN OF OPTIMAL INPUTS FOR THE IDENTIFICATION OF CHARACTERISTICS OF AIRCRAFT FLIGHTS [ENTWURF VON EINGANGSSSIGNALEN FUER DIE KENNWERTERMITTLUNG BEI FLUGZEUGEN]

E. Plaetschke *In* Hochschule der Bundeswehr Seminar on the Simulation and Optimization of Dyn. Systems Jun. 1981 p 102-120 refs
Avail: NTIS HC A08/MF A01

The design of optimal inputs for identifying stability and control derivatives of the longitudinal and lateral motion of an aircraft are considered. Two different procedures of input design were treated in more detail. Starting with investigations in the frequency domain, the first method yields a multistep input signal, which fulfils specific spectral requirements. Compared with the power spectral densities of the commonly used double and single step input, this multistep input has a larger bandwidth. The second method is based on the optimization of different measures of the Fisher information matrix, such as determinant or trace. Depending on the measure used, the designed signals differ with respect to their spectral composition. The discussed input signals, which were used in a flight test program, are compared with respect to the achieved accuracy of the identified stability and control derivatives.

ESTIMATING AIRCRAFT DEPOT MAINTENANCE COSTS Interim Report

Kenneth E. Marks and Ronald W. Hess Jul. 1981 214 p
(Contract MDA903-77-C-0107)
(AD-A103623; RAND/R-2731-PA/E) Avail: NTIS HC A10/MF A01 CSCL 05/1

This report describes a series of parametric equations for use in estimating the depot maintenance cost of new Air Force aircraft, particularly for the five major maintenance categories: airframe rework, engine overhaul, airframe component repair, engine component and accessory repair, and avionics component repair. The equations are intended to provide cost estimates for Defense Systems Acquisitions Review Council Milestone II, at which point some design details of major aircraft subsystems (airframes, engine avionics) are available. The report presents a single set of equations that are the most representative and applicable to the widest range of estimating situations, but presents alternative equations and supporting data and analyses.

A STUDY OF THE FACTORS AFFECTING PRODUCTIVITY AT THE NAVAL AIR REWORK FACILITIES M.S. Thesis

Janice Allton and Stephen N. Bernard Jun. 1981 83 p refs
(AD-A103783; AFIT-LSSR-10-81) Avail: NTIS HC A05/MF A01 CSCL 05/1

The purpose of this study was to determine the factors affecting productivity at Naval Air Rework Facilities (NARFs). Specific points addressed were number and identity of factors, internal consistency and usefulness in predicting perceived productivity. A seventy-two item questionnaire was administered to a random sample of NARF production-line employees. Five hundred thirty-four cases were factor analyzed. Eleven factors extracted were discussed. Eight of these were used to develop a linear multiple regression model to predict perceived productivity. Approximately twenty percent of the variance in perceived productivity was predicted, with five independent variables (factors) work scheduling supervision, overtime, training quality and equipment. These factors generally substantiated those found in current literature.

A PRESCRIPTIVE MODEL FOR RESOURCE ALLOCATION AT THE INTERMEDIATE LEVEL ENGINE FACILITY M.S. Thesis
Edward Connolly and Charlie D. Johnson Jun. 1981 91 p refs
(AD-A103785; AFIT-LSSR-26-81) Avail: NTIS HC A05/MF A01 CSCL 15/5

Inability to support spare engine requirements has a critical impact on this nation's ability to meet its worldwide commitments during a crisis. This study examined those factors that significantly affect the intermediate level Propulsion Branch's ability to provide a steady supply of spare engines. Through simulation modeling and analysis, four factors were identified as driving the Base Repair Cycle time: spare parts, repair equipment, manpower, and experience level. A decision support system was developed which enables most users to assess the influence on repair cycle time of additional funding levels in specific factor areas.

DEVELOPMENT OF MAINTENANCE METRICS TO FORECAST RESOURCE DEMANDS OF WEAPON SYSTEMS Final Report, 1 Mar. 1978 - 1 Oct. 1980
Donald K. Hindes, Gary A. Walker, and David H. Wilson Wright-Patterson AFB, Ohio Air Force Human Resources Lab. Oct. 1980 154 p refs
(Contract F33615-77-C-0075)
(AD-A104089; D194-10089-5) Avail: NTIS HC A08/MF A01 CSCL 05/1

This report describes the methodology and results of a 32 month effort to 'Develop Maintenance Metrics To Forecast Resource Demands of Weapon Systems'. Increased concern with the rising cost to support weapon systems currently in operation, as well as those in development, has created the need for more accurate methods of projecting maintenance requirements. The objective of this subject research was to alleviate the above need by identifying, determining, and integrating those measurable weapon system parameters which are necessary and sufficient to predict and quantify the drivers of maintenance resource demands. Phase 1 investigated and developed new maintenance metrics for aircraft propulsion and avionics. Phase 1 results were then reviewed for overall success and applicability before proceeding with Phase 2 efforts. Initial results were acceptable so Phase 2 of the study was initiated to develop metrics for the rest of the subsystems commonly included in Air Force aircraft. This document is the final report of a series of five technical reports published during the study. It is intended to be a summary overview of the study project and an application guide for potential users of the developed metrics methodology. Study findings include: (1) Review of published literature; (2) Critical equipment selection; (3) Maintenance impact parameter identification; (4) Data base assembly and integration; (5) Maintenance impact estimating relationship detection and analysis; (6) Maintenance metric model development; and (7) Maintenance metrics validation. VERTICAL LIFT CAPABILITIES FOR THE 80'S AND 90'S
Norman R. Augustine and James B. Morrison *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 16 p
Avail: NTIS HC A12/MF A01

During the past few years, several things have happened to make vertical lift more attractive. The first is that the technologies in engines, structures, stability and control and avionics have all been improving rapidly, producing great strides in performance, maintainability and potential cost reduction. The second is that the facts of operational life have changed to put additional value on vertical takeoff and landing capability. The status of battlefield vertical lift systems in the United States in reference to the level of technology, mission capabilities and associated development activities is reported. Also, projections in each of these areas are presented, accompanied by a list of recommendations based on the perceived pitfalls in the past and the technological and mission opportunities of the future. TEN YEARS OF US MARINE CORPS HARRIER OPERATIONS
R. A. Gustafson *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 p 10

Avail: NTIS HC A12/MF A01

The VSTOL concept is exceptionally attractive to the Marine Corps because of the significant benefits to expeditionary capability and reduced close air support response times made possible through basing flexibility. The AV-8A was employed world-wide by the Marine Corps aboard ship and ashore. Although the primary purpose of the AV-8A is to provide close air support to the Marine ground combat element, the thrust-vectoring design of the Harrier proved to have significant potential in air combat maneuvering. Operations with the AV-8A highlight areas where future VSTOLs should be improved as well as providing an experience base to support their design. This operational experience proves the VSTOL concept, and the Marine Corps is convinced that significantly increased combat effectiveness is provided. To further expand the VSTOL application, the Marine Corps plans to replace its present eight light attack squadrons with an improved Harrier, the AV-8B. The long term goal is to achieve an all VSTOL aviation force. T.M.

FIELDING OF AN ADVANCED HELICOPTER. THE UH-60A BLACK HAWK: INITIAL OPERATIONAL EXPERIENCE
Cornelius F. McGillicuddy, Jr. *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 10 p
Avail: NTIS HC A12/MF A01

The Sikorsky UH-60A was developed and designed to replace the UH-1H Iroquois for assault, air cavalry, and aeromedical evacuation missions. The UH-60A carries the infantry squad of 11 men and their equipment as a basic load. Particular emphasis during development was devoted to reducing vulnerability, improving crashworthiness and maintainability. There are eight separate kits for the basic aircraft which increase mission flexibility. The development of the UH-60A was highly successful as have the initial operational experiences. The Black Hawk was issued to operational units and these units deployed and engaged in field exercises both in and outside of the United States. The lessons derived from these operational experiences will assist in improving the UH-60A and defining roles for future utility aircraft. T.M.

VIEWS ON V/STOL TACTICAL FIGHTER AIRCRAFT: TECHNOLOGY NEEDS AND RELATIONSHIPS TO THE RUNWAY DENIAL PROBLEMS

John M. Byrnes, G. Keith Richey, and Randall B. Lowry *In* AGARD The Impact of Mil. App. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 13 p refs

Avail: NTIS HC A12/MF A01

On the basis of a number of studies conducted over the past three or four years, the Air Force technology community developed an intense concern over the vulnerability of USAF airbases, particularly those in Central Europe. For this reason, advanced concepts which may help solve the problem in the near and far terms are addressed. A possible airbase survivability plan is presented, and the pros and cons of STOL versus V/STOL aircraft, as a far term solution, are discussed. T.M.

HISTORICAL OVERVIEW OF V/STOL AIRCRAFT TECHNOLOGY

Seth B. Anderson *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 13 p

Avail: NTIS HC A12/MF A01 CSCL 01B

During the past 25 years over 60 V/STOL types were studied and flown with varying degrees of success. The requirements for satisfactory characteristics in several key technology areas are discussed and a review is made of various V/STOL aircraft for the purpose of assessing the success or failure of each design in meeting design requirements. This survey shows that in spite of many problems revealed, special operating techniques were developed to help circumvent deficiencies. For the most part performance and handling qualities limitations restricted operational evaluations. Flight operations emphasized the need for good STOL performance, good handling qualities, and stability and control augmentation. The majority of aircraft suffered adverse ground effects. T.M.

RECENT PROGRESS IN V/STOL AIRCRAFT TECHNOLOGY

L. Roberts, W. Deckert, and D. Hickey *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 10 p refs

Avail: NTIS HC A12/MF A01 CSCL 01B

Recent results from wind-tunnel and flight-tests investigations for V/STOL aircraft were reviewed. Primary emphasis is given to technical results relating to three types of subsonic aircraft: a quiet STOL aircraft, a tilt rotor aircraft, and a turbofan V/STOL aircraft. Comparison and correlation between theoretical and experimental results, and between wind-tunnel and flight-test results, is made. The quiet STOL aircraft technology results are primarily those derived from the NASA/Boeing Quiet Short Haul Aircraft (QSRA) program. The tilt rotor aircraft technology results are those obtained from the NASA/Army/Navy/Bell (XV-15-TRRA) aircraft flight investigations. The turbofan V/STOL aircraft technology results are from static ground facility and wind-tunnel investigations of a NASA/Navy/Grumman full-scale lift/cruise fan aircraft model, which features two tilting nacelles with TF-34 engines. CONTROLS AND DISPLAYS FOR ALL-WEATHER OPERATION OF HELICOPTERS

R. D. vonReth *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 15 p refs

Avail: NTIS HC A12/MF A01

Various mission requirements for all weather operations were reviewed. In particular some of the most important features for military applications are outlined. Some of the basic relations between increasing display sophistication and increasing control sophistication are discussed. Also the influence of various functions on the degree of control automation as it seems desirable for future systems under the aspect of man-machine interaction are taken into consideration. In a comparison the controls and displays arrangement of some representative helicopters of presently operational helicopters are described. An outline of the goals and results of some experimental and research programs is given. The characteristics of presently operational helicopters are compared with the technologically feasible solutions taking into account some of the economic constraints as initial cost, operational cost and reliability. Future basic requirements for the controls and the displays operation are established. T.M.

THE ROLE OF THE RESEARCH SIMULATOR IN THE SYSTEMS DEVELOPMENT OF ROTORCRAFT

Irving C. Statler and Arlin Deel *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 21 p refs Prepared in cooperation with Army Aviation Research and Development Command, Moffett Field, Calif.

Avail: NTIS HC A12/MF A01 CSCL 14B

Over the last 20 years, flight simulators became widely accepted as training tools. Moreover, research simulators were used extensively by the fixed-wing industry: in the design, testing, and certification of new aircraft. The rotorcraft industry, however, was slow to use man-in-the-loop simulation to solve its design problems, primarily because of the difficulty of modeling complex rotorcraft for realtime simulation and because of the need for a wide-angle visual system for low-level flight. A joint U.S. Army and NASA program was initiated to provide this simulation capability for exploitation by both government and industry. The potential application of the research simulator to future rotorcraft systems design, development, product improvement evaluations, and safety analysis is discussed. T.M.

THE IMPACT OF HELICOPTER FLIGHT MECHANICS ON MISSION PERFORMANCE

B. L. Gmelin and H.-J. Pausder *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 14 p refs

Avail: NTIS HC A12/MF A01

In comparison to other VTOL aircraft, the helicopter has inherently superior flying characteristics at hover and in the low speed region but it has clear disadvantages by its lower high speed capability. For the completion of today's military helicopter missions near the ground and in all weather flight conditions a careful flight mechanical adaptation of the pilot-helicopter system to the specific task is required. This includes the combined optimization of the basic aircraft, the additional system equipment, and in a certain degree the pilot control behavior. A DFVLR-methodology is presented, having the objective to evaluate the flight mechanical characteristics of the pilot-helicopter system with regard to specific flight tasks. The method leads to taskoriented evaluation diagrams which include scales for the overall system task performance and for the demands on the pilot. Relevant flight test results of the BO 105 helicopter in hover and NOE-flight are presented. Especially the parameters control activity and task performance are discussed. Author

MULTI-MISSION STOVL WITH VECTORED THRUST ENGINES

W. J. Lewis and P. Simplin (Rolls-Royce Ltd., Derby, England) *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 9 p

Avail: NTIS HC A12/MF A01

It is demonstrated how a single vectored thrust engine with plenum chamber burning on the front nozzles can be used in both a subsonic strike and a supersonic air superiority aircraft. The operational capability of the STOVL aircraft was compared with CTOL aircraft powered by an advanced turbofan of similar technology. It is also demonstrated that, when operated on the European environment, the STOVL aircraft when sized and operated in a manner which takes advantage of their specialized capabilities, have higher levels of mission effectiveness compared to the CTOL designs. MISSION POTENTIAL OF DERIVATIVES OF THE XV-15 TILT ROTOR RESEARCH AIRCRAFT

Kenneth G. Wernicke *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun 1981 9 p

Avail: NTIS HC A12/MF A01

Outstanding low- and high-speed performance and flight characteristics were demonstrated and measured on the XV-15 tilt rotor research aircraft. Although the XV-15 was designed specifically as a research vehicle, it has the potential, with suitable modifications, to evolve into a productive aircraft for other missions. An increase in blade chord and installation of current state-of-the-art engines increase payload and significantly reduce fuel consumption. A third engine is installed on top of the fuselage to provide good one-engine-inoperative performance. A new fuselage is used for gunship missions. Derivative aircraft and the required changes for commerical and military applications are described. It is shown that the XV-15 derivatives are competitive with existing aircraft. Some of the derivative aircraft can perform missions not possible with airplanes or helicopters by use of the unique high-speed/long-range VTOL capability and the highly-flexible flight envelope of the tilt rotor aircraft. ADVANCING BLADE CONCEPT HELICOPTER MISSION CAPABILITIES

Robert Zincone and Arthur W. Linden *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 16 p

Avail: NTIS HC A12/MF A01

Today there are several ongoing research programs aimed at combining speed with helicopter attributes in a single vehicle. There is a growing recognition of a need for such aircraft and an active reexamination of the value of speed, the value of helicopter attributes (hover and low speed performance) and the trade-offs between these. Key attributes of interest to military users are: Battlefield survivability - ballistic, acoustic, radar cross section, IR signature; high speed flight while preserving low speed handling qualities equal to those of modern combat helicopters; compact design with low inertia, yielding high angular rates and precise control in all axes; high acceleration and deceleration capability; carrier and small ship compatibility, with good, low speed platform stability; superior one engine inoperative performance and safety; and field level maintainability with rugged reliability and maintainability attributes owing to simplicity of design. The Advancing Blade Concept helicopter has recently completed a feasibility demonstration phase showing that these attributes can be achieved in future aircraft designs. Author

DESIGN FOR MAXIMUM EFFECTIVENESS IN THE NAVY ROLE

Paolo Bellavita *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 20 p

Avail: NTIS HC A12/MF A01

The tremendous increase of the submarine threat in terms of speed, depth and weapon systems has forced the navies to review the concepts followed until today for the anti submarine warfare (ASW). Particularly for the peculiar Mediterraneum environment new operational requirements for typical helicopter ASW missions must be developed taking also into account the future availability of low frequency, high range Sonar. To get the maximum profit from this technological improvement, missions should be planned with unusual long time in the search area both in terms of longer hovering and longer Time on Station many miles from the home ship in connection with high air temperature, wind absence, high rotor thrust margin and complete fly away capability in case of engine failure during sonar operation. The optimization of the helicopter design parameters to achieve the maximum effectiveness in the ASW role within the Italian Scenario and the engineering parametric techniques used are described. THE IMPACT OF OPERATIONAL REQUIREMENTS ON THE COMPROMISE OF DESIRED FEATURES IN ROTORCRAFT DESIGN

Klaus F. M. Schymanietz *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 17 p refs

Avail: NTIS HC A12/MF A01

The increase of influence for helicopters in military missions can be related to more diversification as well as special designed types. General valid aspects include the all-weather capability, high performance and agility, low vulnerability and detectability and all together high mission effectiveness. The addressed systems can be divided in three areas, the design of the dynamic systems including the rotor- and propulsion-system, the structural design, and the design of the equipment systems. In the first area, the dynamic systems and components, the general, i.e., civil and military, trend is to be seen towards more economy, use of advanced materials, aerodynamic efficiency etc. In the military field in addition high agility, i.e., high maneuverability and high installed power, is required. Derived from the mission task high demands are set in the structural field, esp. the crashworthiness, i.e., high energy absorption by constructional means and specific materials. Dependent on operational requirements as all-weather capability, autonomous navigation, automatic hover the field of equipments of today's and future weapon systems becomes more and more important and complex. US MILITARY V/STOL: WHO NEEDS IT? WANTS IT? CAN AFFORD IT?

David C. Hazen *In* AGARD The Impact of Mil. Appl. on Rotorcraft and V/STOL Aircraft Design Jun. 1981 7 p

Avail: NTIS HC A12/MF A01

For a period of thirty years, fixed wing V/STOL technology has been under development. Of all the concepts investigated, only the vectored thrust approach employed in the AV-8A Harrier has found application in the combat forces of the Western World.

This application was itself more the result of a technology push than of any clearly perceived operational pull. Once incorporated in operational units, however, the flexibility of basing displayed by the Harrier led to the evolution of entirely new operation concepts--and the requirement for improved aircraft to meet them. There are clear indications that the vulnerability of aircraft bases both ashore and afloat may make the V/STOL option essential in the future. Constrained by limited budgets and unimpressed by the performance currently available from V/STOL machines, the U.S. Services, other than the Marines, have no plans for introducing V/STOL into their forces, preferring instead to keep the technology on the shelf for future applications. If, however, V/STOL is to be effective in meeting future needs, the operational experience and doctrine to employ it must be developed now to guide the design of the machines that will be required. It is becoming increasingly critical that this Catch 22 be broken--and soon. Author

ANALYSIS OF THE PERFORMANCE OF THE DRIVE SYSTEM AND DIFFUSER OF THE LANGLEY UNITARY PLAN WIND TUNNEL
Robert L. Stallings and Lowell E. Hasel Oct. 1981 67 p refs
(NASA-TM-83168; L-14543) Avail: NTIS HC A04/MF A01 CSCL 01A

A broad program was initiated at the Langley Research Center in 1973 to reduce the energy consumption of the laboratory. As a part of this program, the performance characteristics of the Unitary Plan Wind Tunnel were reexamined to determine if potential methods for incresing the operating efficiencies of the tunnel could be formulated. The results of that study are summarized. The performance characteristics of the drive system components and the variable-geometry diffuser system of the tunnel are documented and analyzed. Several potential methods for reducing the energy requirements of the facility are discussed. T.M.

EXPERIMENTAL AND THEORETICAL STUDY OF THREE INTERACTING, CLOSELY-SPACED, SHARP-EDGED 60 DEG DELTA WINGS AT LOW SPEEDS Final Report
H. F. Faery, Jr., J. K. Strozier, and J. A. Ham Washington NASA Oct. 1981 47 p refs Sponsored by NASA
(NASA-CR-3460) Avail: NTIS HC A03/MF A01 CSCL 01A

Wind tunnel tests were conducted to determine the subsonic longitudinal aerodynamic characteristics of lifting configuration consisting of a 60 deg delta main wing with two smaller 60 deg delta wings (called sub-wings) attached underneath. The test was designed to determine the effects on lift, drag, and pitching moment due to various placement of the subwings in relation to the main wing. Test results indicate the increasing vertical separation between the main wing and the sub-wings produced the most significant results: a 23.1% increase in maximum lift coefficient, a reduction in drag coefficient at high lift coefficients, and an increase in longitudinal stability. Lateral separation of the sub-wings produced no significant changes. Placement of the sub-wings rearward increases the initial lift curve slope and maximum lift coefficient and also increase the longitudinal stability. Results of a computer study using a vortex lattice code supported the experimental conclusions. M.G.

INVESTIGATION OF UNSTEADY AIRLOADS ON WINGS WITH OSCILLATING CONTROL FOR ACTIVE CONTROL PURPOSES
W. Geissler (DFVLR, Goettingen, West Germany) Jul. 1981 16 p refs Presented at 52nd Meeting of the AGARD Structures and Mater. Panel, Cesme, Turkey, 5-10 Apr. 1981
(AGARD-R-699; ISBN-92-835-1392-2) Avail: NTIS HC A02/MF A01

Intensive experimental investigations were carried out on a wing section with oscillating control including a streamlined gap between both wing parts. Steady as well as unsteady pressure distributions were measured outside and inside the gap region for various incidences, flap angles, and frequencies. In addition to the experimental investigations, a calculation procedure was developed taking into account the real boundaries of the configuration including the gap region and assuming the fixed wing part and the oscillating control as two lifting systems with two Kutta conditions and correspondingly two wakes behind wing and control. Comparisons between theory and experiment are discussed in detail and the major influences and effects of viscosity are pointed out. The results lead to special conclusions for the applicability of lifting systems for active conrol purposes. J.M.S.

EVALUATION OF PRESSURE AND THERMAL DATA FROM A WIND TUNNEL TEST OF A LARGE-SCALE, POWERED, STOL FIGHTER MODEL Final Report, 4 Jun. 1980 - 4 Jun. 1981
G. A. Howell, E. L. Crosthwait, and M. C. Witte Jun. 1981 987 p refs
(Contract NAS2-10649)
(NASA-CR-166170) Avail: NTIS HC A99/MF A01 CSCL 01A

A STOL fighter model employing the vectored-engine-over wing concept was tested at low speeds in the NASA/Ames 40 by 80-foot wind tunnel. The model, approximately 0.75 scale of an operational fighter, was powered by two General Electric J-97 turbojet engines. Limited pressure and thermal instrumentation were provided to measure power effects (chordwise and spanwise blowing) and control-surface-deflection effects. An indepth study of the pressure and temperature data revealed many flow field features - the foremost being wing and canard leading-edge vortices. These vortices delineated regions of attached and separated flow, and their movements were often keys to an understanding of flow field changes caused by power and control-surface variations. Chordwise blowing increased wing lift and caused a modest aft shift in the center of pressure. The induced effects of chordwise blowing extended forward to the canard and significantly increased the canard lift when the surface was stalled. Spanwise blowing effectively enhanced the wing leading-edge vortex, thereby increasing lift and causing a forward shift in the center of pressure. Author

IMPROVING THE CRASHWORTHINESS OF GENERAL AVIATION AIRCRAFT BY CRASH INJURY INVESTIGATIONS
William R. Kirkham May 1981 17 p refs Sponsored by FAA
(AD-A103316; FAA-AM-81-10) Avail: NTIS HC A02/MF A01 CSCL 01/2

An accident investigative research program has correlated injuries to aircraft occupants with the accident severity and structural changes in the crash. Findings brought to the attention of aircraft manufacturers have led to specific aircraft being made more crashworthy. Following the finding of a failure in a shoulder harness attachment the manufacturer strengthened the attachment brace. The way a shoulder harness was joined to a lapbelt was modified as a followup to failure of the attachment in an accident. Noted fractures of lapbelt and shoulder harness cable tiedowns led to the use of stronger cables and modification of the installation. Other accident findings resulted in a shoulder strap guide being placed on an inertia reel and a side-mounted seat being modified. GRA

EMERGENCY CABIN LIGHTING INSTALLATIONS: AN ANALYSIS OF CEILING- VERSUS LOWER CABIN-MOUNTED LIGHTING DURING EVACUATION TRIALS
Burton P. Chesterfield, Paul G. Rasmussen, and Robert D. Dillon Feb. 1981 46 p refs
(AD-A103191; FAA-AM-81-7) Avail: NTIS HC A03/MF A01 CSCL 01/2

Six series of human subject evacuation tests were conducted to compare the evacuation rates with two different emergency lighting systems in an aircraft cabin filled with nontoxic white smoke. Cabin emergency lighting and exit signs mounted near the ceiling were almost completely obscured by smoke, which layered most heavily in the upper one-half of the cabin. A comparison lighting system mounted below layered smoke in aisle seat armrests, with exit signs mounted at and below the cabin midpoint, provided light directly in the aisle and cross aisle. Results indicated that lights and signs mounted lower in the cabin were more readily visible in smoke and enabled subjects to evacuate from a smoke-filled cabin more rapidly than conventional ceiling-mounted lights and signs. TEST AND EVALUATION OF AN EXPERIMENTAL FEASIBILITY PROTOTYPE PASSIVE SEAT MOUNTED LIMB RESTRAINT SYSTEM
Marcus Schwartz 20 May 1981 63 p
(AD-A104161; NADC-81065-60) Avail: NTIS HC A04/MF A01 CSCL 13/6

An experimental feasibility prototype of passive seat mounted limb restraint system was tested under various conditions both statically and dynamically on the NAVAIRDEVCEN Ejection Tower and the Dayton T. Brown windblast facility. The Ejection Tower tests resulted in successful and repeatable entrapment of the arm and legs, and good tensioning of the restraint lines through one-way snubbers. The windblast test series also resulted in successful entrapment of the limbs at various pitch and yaw angles up to 600 knots. The results of this T&E study clearly showed the feasibility of the system to provide the necessary protection to the crewmember during the simulated operation environments, and also to meet the passive requirements which results in no additional encumbrances on the crewmember. MULTISITE TESTING OF THE DISCRETE ADDRESS BEACON SYSTEM (DABS) Interim Report, Mar. - Sep. 1980
J. L. McMillen, J. W. Davis, and R. J. Spadea, Jr. Jul. 1981 61 p refs
(FAA Proj. 034-241-510)
(AD-A103575; FAA-CT-81-9; FAA-RD-81-49) Avail: NTIS HC A04/MF A01 CSCL 17/7

This report contains results of tests performed in an environment of multiple Discrete Address Beacon System (DABS) sensors, one each located at Clementon and Elwood, New Jersey, and the Federal Aviation Administration (FAA) Technical Center, Atlantic City Airport, New Jersey. These DABS sensors were tested in various degrees of intersensor communication that ranged from a full network of connected sensors to a fully nonnetted configuration. The multiple DABS sensors were tested in four major areas: network management, surveillance processing, data link processing, and intersensor communications. It is concluded that the performance of the DABS sensors in multisite configurations meets or exceeds the requirements specified in the DABS engineering requirement (FAA-ER-240-26). Author (GRA)

CROSSTALK LEVELS OF SPEECH PLUS DATA IN REMOTE COMMUNICATION AIR-GROUND (RCAG) Final Report, Aug. 1979 - May 1980
Albert J. Rehmann Jun. 1981 61 p refs
(AD-A103351; FAA-CT-80-38) Avail: NTIS HC A04/MF A01 CSCL 17/2

The Federal Aviation Administration (FAA) is proposing the addition of a digital data channel to the existing telephone lines which connect air route traffic control centers (ARTCC's) with Remote Communication Air-Ground (RCAG) sites to economically transfer remote monitoring system (RMS) parameters and control data between the ARTCC's and the sites. FAA Specification FAA-E-2699a establishes the maximum allowable interference level to pilot/controller communications which would be allowed to result from the addition of the data channel. The tests described in this document were designed to verify that the requirements in FAA-E-2699a are sufficient to prevent disturbance to normal air traffic control (ATC) operations. The tests were performed by simulating and existing communications channel using data modems and samples of present-day Voice Frequency Control System (VFCS) equipment. Crosstalk levels of speech and data were measured under actual operating conditions. The test results indicated that the addition of an RMS data channel to existing FAA telephone lines is technically feasible and that the requirement in FAA-E-2699a concerning the data crosstalk in the audio portion of the communication channel is not adequate to prevent disturbance to normal ATC operations. The requirements concerning data crosstalk in the control portion and VFCS crosstalk in the data portion of the channel are sufficient. Author (GRA)

EN ROUTE DISCRETE ADDRESS BEACON SYSTEM/AIR TRAFFIC CONTROL (BUILD 1) TECHNICAL TESTING
Robert E. Copes, III and Richard V. Dardano Jul. 1981 35 p
(FAA Proj. 122-115-540)
(AD-A103894; FAA-CT-80-30; FAA-RD-81-31) Avail: NTIS HC A03/MF A01 CSCL 17/7

Tests of the Discrete Address Beacon System (DABS) in an air traffic control (ATC) en route National Airspace System (NAS) environment were conducted at the Federal Aviation Administration (FAA) Technical Center. These tests included: (1) surveillance performance in the areas of track initiation, track continuity, and track swap; and (2) surveillance related communication responses employing the Common International Civil Aviation Organization (ICAO) Data Interchange Network (CIDIN) protocol for Air Traffic Control Radar Beacon System (ATCRBS) identification (ID) requests. Test results indicate that the en route DABS/ATC Build I software successfully processed DABS sensor surveillance information. Although analyzed on a limited basis, the transmission of surveillance related communication messages between the DABS sensor and the en route DABs/ATC Build I system is considered to operate as expected. It is concluded that the DABS/ATC en route Build I system accepts, processes, tracks, and displays DABS and ATCRBS surveillance data from one DABS and multiple ATCRBS sensors with no degradation to the baseline function of the NAS software system A3d2.4. OPERATION FREE FLIGHT: AN OPERATIONAL EVALUATION OF DIRECT ROUTE FLIGHT PLAN FILING IN TODAY'S NATIONAL AEROSPACE SYSTEM Final Report
Wayne Minnick Jul. 1981 87 p
(AD-A104150; FAA-AT-81-1) Avail: NTIS HC A05/MF A01 CSCL 17/7

This report presents the results of an operational evaluation concerning the feasibility of permitting the filing of direct route flight plans, without route definition, between departure and arrival area fixes serving selected city-pairs. The evaluation was conducted with the voluntary participation of Eastern, United, and Pan American Airlines during the period June 1 through December 31, 1980. Objectives of Operation Free Flight were to obtain factual information about air traffic control (ATC) handling of test aircraft on direct routings, system prohibitions to the concept, general pilot attitude regarding the utility of their RNAV equipment, potential fuel savings, and ATC system impact. The evaluation was conducted throughout the contiguous United States between 27 city-pairs. The primary conclusions were: the operational concept of filing direct, great circle routes between departure and arrival area fixes, at altitudes above Flight Level 290, in a radar environment; incompatibility with traffic arrival flow at destination airports was determined to be the most significant system prohibition; pilot attitude was skewed in a positive direction; potential fuel savings are projected to be in excess of 40,000,000 gallons per year, and, there was no adverse impact to the ATC system. APPLICATION OF ADVANCED TECHNOLOGIES TO DERIVATIVES OF CURRENT SMALL TRANSPORT AIRCRAFT Final Report
P. P. Renze and J. E. Terry Jul. 1981 112 p refs
(Contract NAS2-10571)
(NASA-CR-166197) Avail: NTIS HC A06/MF A01 CSCL 01C

Mission requirements of the derivative design were the same as the baseline to readily identify the advanced technology benefits achieved. Advanced technologies investigated were in the areas of propulsion, structures and aerodynamics and a direct operating cost benefit analysis conducted to identify the most promising. Engine improvements appear most promising and combined with propeller, airfoil, surface coating and composite advanced technologies give a 21-25 percent DOC savings. A 17 percent higher acquisition cost is offset by a 34 percent savings in fuel used. T.M.

STATISTICS OF SOME ATMOSPHERIC TURBULENCE RECORDS RELEVANT TO AIRCRAFT RESPONSE CALCULATIONS
William D. Mark and Raymond W. Fischer Washington NASA Sep. 1981 238 p refs
(Contract NAS1-14837)
(NASA-CR-3464) Avail: NTIS HC A11/MF A01 CSCL 01C

Methods for characterizing atmospheric turbulence are described. The methods illustrated include maximum likelihood estimation of the integral scale and intensity of records obeying the von Karman transverse power spectral form, constrained least-squares estimation of the parameters of a parametric representation of autocorrelation functions, estimation of the power spectra density of the instantaneous variance of a record with temporally fluctuating variance, and estimation of the probability density functions of various turbulence components. Descriptions of the computer programs used in the computations are given, and a full listing of these programs is included. T.M.

ANALYSIS AND DESIGN OF SUPERSONIC AIRCRAFT BASED ON INVISCID NONLINEAR EULERIAN EQUATIONS. PART 1: ROTATIONAL EULER SOLUTIONS WITH EXPLICIT SHOCK FITTING Final Report, 1 Oct. 1977 - 1 Apr. 1979
M. J. Siclari and F. Marconi Oct. 1980 118 p refs
(Contract F33615-77-C-3126; AF Proj. 2404)
(AD-A103434; RE-623-Pt-1; AFWAL-TR-80-3110-Pt-1) Avail: NTIS HC A06/MF A01 CSCL 01/3

A computer program has been developed to compute the inviscid supersonic flow over delta wings and smooth wing-body configurations. A second-order accurate predictor-corrector finite-difference scheme is used to integrate the three dimensional Euler equations in regions of continuous flow. Bow shock and crossflow-induced embedded shocks are explicitly computed as discontinuities which simultaneously satisfy the characteristic and the Rankine-Hugoniot conditions. In computing the flow about complex wing cross sections, the use of appropriate conformal mappings was an important factor in developing a computational mesh capable of resolving the large flow gradients that are inevitable in the vicinity of wing leading edges. Geometry programs were developed to supply the appropriate geometric boundary conditions necessary to compute complex wing cross sections. New starting solutions were developed that were more appropriate to thin-wing cross sections. In the initial stage of development, the flow about conical wings was computed for a two-fold purpose. Conical Euler solutions would be used as starting conditions for conical wing-bodies and three dimensional wings and the conical problem would uncover potential problem areas in the computation of these flows without the added complexity of geometrical variations. The conical problem led to the development of special techniques to resolve the vortical layer that inevitably develops on the body surface. Typical results are shown for subsonic and supersonic leading edge delta wings and wing-body combinations. GRA

DESIGN OF A SLOT HEIGHT DISTRIBUTION FOR INCREASED HOVER CONTROL POWER ON A CIRCULATION CONTROL ROTOR Final Report
Daniel W. Poe Dec. 1980 31 p refs
(AD-A103535; DTNSRDC/ASED-80/24) Avail: NTIS HC A03/MF A01 CSCL 01/3

The Circulation Control Rotor Performance Prediction computer program was used with the XH-2/CCR rotor configuration to determine a slot height distribution that would improve control power in hover without causing excessive cyclic pressure requirements for trim in forward flight. Effects of total slot area as well as distribution were considered. The final distribution was constrained by a minimum practical slot height setting of 0.002 in. and a minimum unpressurized blade slot area of 3.0 square inches. Several distributions were evaluated. Noteworthy trends that emerged are: (1) A negatively tapered slot height distribution is favorable to producing hub moments in hover, and (2) a uniform distribution (zero taper) requires the lowest cyclic pressure for trim at 120 knots. The final distribution selection exhibited a 38-percent improvement in predicted hub moment over a slot height distribution previously used on the flight demonstrator. Author (GRA)

A FLIGHT TEST EVALUATION OF THE BALL-BARTOE JETWING PROPULSIVE LIFT CONCEPT Progress Report, 18 Apr. 1980 - 17 Apr. 1981
Ralph D. Kimber 1 Jul. 1981 191 p refs
(Contract N00019-80-C-0126)
(AD-A103579; UTSI-81-1) Avail: NTIS HC A09/MF A01 CSCL 01/3

The need for military aircraft that will operate from short unimproved airfields, and the decks of smaller aircraft carriers has increased in recent years due to a changing world situation and the shrinking of the dollar. Such aircraft need to be fuel efficient, quiet, maneuverable, have low infrared signature, and carry a large useful load. The Ball-Bartoe 'Jetwing' is a single engine upper surface blowing concept which offers the possibility of achieving these objectives. The 'Jetwing' concept achieves supercirculation lift and STOL performance by ducting all engine air through the leading edge of the wing and ejecting it over the top surface of the wing through a slot nozzle. This nozzle extends along approximately 70% of the wing span. A Coanda flap is mounted at the trailing edge of the blown portion of the wing. In addition to the main wing, a smaller wing panel is mounted above the slot nozzle. The air passage between the main wing and the smaller upper wing acts as an ejector to reduce installed thrust losses. For high speed applications that concept may be used without this upper wing. A thrust reversing method is also incorporated into the concept. The thrust is reversed by rotating the top of the slot nozzle so as to close the nozzle and open a reverse flow path. This report covers the flight test program of the Jetwing research airplane. GRA

ALTERNATE T-38 TRANSPARENCY DEVELOPMENT. PART 1: INITIAL ANALYSIS AND DESIGN Final Report, Jan. 1979 - Sep. 1980
Blaine S. West and Kenneth I. Clayton Wright-Patterson AFB, Ohio AFWAL Nov. 1980 58 p refs 2 Vol.
(Contracts F33615-76-C-3103; F33615-80-C-3401; AF Proj. 2202; AF Proj. 1926)
(AD-A103261; UDR-TR-80-91-Pt-1; AFWAL-TR-80-3132-Pt-1) Avail: NTIS HC A04/MF A01 CSCL 01/3

T-38 missions at speeds above the existing crew enclosure damage threshold will result in flight safety risk to aircraft and crew. This report documents the design development of alternate T-38 transparencies having the capability of defeating the impact of a four pound bird at aircraft speeds up to 400 knots. To accomplish the desired windshield/canopy redesign, a feasibility study was conducted, damage probability was determined, the birdstrike capability of existing transparencies was experimentally evaluated, edge attachment screening specimens were laboratory tested, and finite element analyses were made. Major findings from each task have been integrated into the detail design of a birdstrike resistant forward windshield panel, recommended for full-scale hardware fabrication, testing, and evaluation. Forward canopy and instructor windshield concepts are also discussed. Author (GRA)

AN EXPERIMENTAL INVESTIGATION OF VTOL FLYING QUALITIES REQUIREMENTS OR SHIPBOARD LANDINGS Final Report, Apr. 1978 - Sep. 1980
Robert C. Radford, Dominick Andrisani, II, and John L. Beilman Aug. 1981 262 p refs
(Contract N62269-78-C-0043)
(AD-A104137; CALSPAN-6286-F-1; NADC-77318-60) Avail: NTIS HC A12/MF A01 CSCL 01/2

This fifth simulation experiment, using the U.S. Navy X-22A variable stability V/STOL aircraft, was undertaken to generate data for the development to flying qualities and advanced flight control system design criteria for the visual shipboard landing task. Since a broad range of flying qualities was simulated, actual landings were not performed because of flight safety considerations. Instead, a discrete three dimensional position tracking task, presented to the pilot on a Head-Up-Display (HUD), was devised to evoke pilot control and stabilization activity similar to that in the actual shipboard environment. A microwave landing system with precision ranging capability served as the guidance sensor for both the translational rate flight control system mechanizations and for the HUD tracking information. A total of 3 evaluations were performed of various horizontal and vertical translational rate flight control system dynamics. The primary results of the program defined regions of satisfactory and acceptable flying qualities as functions of velocity command gain and the time constant of velocity response. The limits on command gain and time constant for satisfactory flying qualities indicated by this experiment are considerably smaller than those determined in ground simulator experiments. RESPONSES TO COMMENTS OF AIR TRANSPORT ASSOCIATION OF AMERICA ON AIRCRAFT TOWING FEASIBILITY STUDY
Jun. 1981 112 p refs
(Contract DE-AC01-79CS-50069)
(DE81-029834; DOE/CS-50069/T1) Avail: NTIS HC A06/MF A01

A preliminary assessment of the constraints on and feasibility of extended aircraft towing between airport runways and terminal gate areas with engines shutdown is made. Past aircraft towing experience and the state of the art in towing equipment are reviewed. Safety and operational concerns associated with aircraft towing are identified, and the benefits and costs of implementing aircraft towing at 20 major US airports are analyzed. It was concluded that extended aircraft towing is technically feasible and that substantial reductions in aircraft fuel consumption and air pollutant emissions can be achieved through its implementation. It was also concluded that, although capital and operating costs associated with towing would be increased, net savings could generally be attained at these airports. Because of the lack of past experience and the necessity of proving the cost effectiveness of towing concept, a demonstration of the feasibility of large scale aircraft towing is necessary. DOE

SIMULATOR EVALUATION OF SEPARATION OF DISPLAY PARAMETERS IN PATH-FOLLOWING TASKS
Garimella R. Sarma and James J. Adams Oct. 1981 44 p refs
(NASA-TP-1915; L-14590) Avail: NTIS HC A03/MF A01 CSCL 01D

A five degree of freedom, fixed base simulation changing the location of the displays for bank angle, pitch angle, heading angle, and the vertical and lateral displacement from an instrument landing system path was studied. It is shown that the accuracy of the lateral path following and the pilot aircraft system dynamic characteristics deteriorate when bank angle is displayed separated from the other attitudes. It is found that best results are obtained when bank, heading, and pitch angles are displayed together and vertical and lateral displacements are displayed at another location in the display. E.A.K.

SIMPLIFIED OFF-DESIGN PERFORMANCE MODEL OF A DAY TURBOFAN ENGINE CYCLE
Frederick J. Lallman Sep. 1981 33 p refs
(NASA-TM-83204) Avail: NTIS HC A03/MF A01 CSCL 21E

The specific thrust and fuel-air ratio for a dry turbofan engine cycle were calculated for several power levels over a range of altitudes and Mach numbers. The engine has a design fan pressure ratio of 2.9, compressor pressure ratio of 8.0, and bypass ratio of 0.6. Nominal engine component curves were picked to approximate the calculated data to construct a simplified model of the off-design performance of the engine. The model was then used to construct a simplified design-point engine model for the full-power condition. Author

PROPULSIVE LATERAL CONTROL NOZZLE Patent Application
Paul L. Coe, Jr. and Albert B. Graham, inventors (to NASA) (Old Dominion Univ.) Filed 18 Nov. 1980 9 p
(NASA-Case-LAR-12136-1; US-Patent-Appl-SN-208093) Avail: NTIS HC A02/MF A01 CSCL 01C

The invention relates to a trailing edge flap system useful in increasing low speed lift and low speed roll control in supersonic aircraft. Two trailing edge flaps (upper and lower) extend from the aircraft's engine exhaust nozzle. In the high lift mode of operation, a diverter block pushes the upper flap away from the nozzle, thereby exposing a flow passageway. Exhaust flow through the passageway tends to decrease boundary layer separation. To provide propulsive lateral control, the diverter block of one wing may be selectively closed, thereby reducing the lift on that wing. NASA

SIMULATOR EVALUATION OF THE EFFECTS OF REDUCED SPOILER AND THRUST AUTHORITY ON A DECOUPLED LONGITUDINAL CONTROL SYSTEM DURING LANDINGS IN WIND SHEAR
G. Kimball Miller, Jr. Oct. 1981 51 p refs
(NASA-TM-83188; L-14652) Avail: NTIS HC A04/MF A01 CSCL 01C

The effect of reduced control authority, both in symmetric spoiler travel and thrust level, on the effectiveness of a decoupled longitudinal control system was examined during the approach and landing of the NASA terminal configured vehicle (TCV) aft flight deck simulator in the presence of wind shear. The evaluation was conducted in a fixed-base simulator that represented the TCV aft cockpit. There were no statistically significant effects of reduced spoiler and thrust authority on pilot performance during approach and landing. Increased wind severity degraded approach and landing performance by an amount that was often significant. However, every attempted landing was completed safely regardless of the wind severity. There were statistically significant differences in performance between subjects, but the differences were generally restricted to the control wheel and control-column activity during the approach. UPGRADED FAA AIRFIELD CAPACITY MODEL. VOLUME 2: TECHNICAL DESCRIPTION OF REVISIONS
William J. Swedish Washington FAA Feb. 1981 161 p refs
(Contract DT-FA01-81-C-10001)
(AD-A104155; MTR-81W16-Vol-2; FAA-EM-81-1-Vol-2) Avail: NTIS HC A08/MF A01 CSCL 01/2

The FAA Airfield Capacity Model, a computer program designed to quickly calculate the runway capacity of an airport, has recently been upgraded. Several new features have been implemented in the upgraded version. Among these are improved input and output formats for easier usage, the capability to compute runway capacity for up to eleven different percentages of arrivals in a single run (as opposed to a separate run for each percentage), and provisions for calculating the capacity of alternating arrivals to a pair of parallel runways. Several other runway configurations have been added to the model, or improved, as well. Other changes have been made to the internal logic of the model which will result in reduced running times and/or improved accuracy. The resulting capacities may, therefore, differ from the results obtained with the previous version. In most cases this will not affect the ranking of the potential airfield changes under evaluation. This report documents the upgraded FAA Airfield Capacity Model. Volume 2 is a detailed technical description of the revisions to the program, including flow charts of the logic and evaluations of various alternative logics. This volume is intended as a programmer's guide, but it may also be useful for the experienced analyst who desires a fuller understanding of the model. GRA

ANTI-SYMMETRIC ELASTIC PROPERTIES OF COMPOSITE PLATES OF SATIN WEAVE CLOTH
Takashi Ishikawa Jan. 1981 18 p refs
(NAL-TR-649T; ISSN-0389-4010) Avail: NTIS HC A02/MF A01

Composite plates made of satin weave fabric show macroscopic antisymmetricity and coupling effects. The essential mechanism of such behavior is basically clarified. Closed form solutions of the upper and lower bounds of the stiffness and compliance are obtained by the simplest series model in connection with the uniform stress and strain assumptions. Finite element analyses using 3-D isoparametric elements are also conducted. The solutions fall between both bounds within a certain restriction. The deviation of the actual quasimicromechanical conditions from the simple assumptions can be observed through the FEM results. Rough estimation of thermal warping coefficients is carried out for carbon/epoxy and glass/polyimide 8th harness satin composites by simple measurements. More accurate results are provided by experiments for measuring thermal deflection under a small temperature change. These results confirm the theoretical predictions by both methods. Several comments on ways of preventing such phenomena are made based on the geometry of the fabric structures. Author

ENGINEERING EFFECTS OF ADVANCED COMPOSITE MATERIALS ON AVIONICS Final Technical Report, Sep. 1980 - Jun. 1981
W. Graf, J. Hamm, J. E. Navevicz, and D. E. Tremain Jul. 1981 132 p refs
(Contract DAAK80-80-C-0806)
(AD-A104015; USAAVRADCOM-80-0806-F) Avail: NTIS HC A07/MF A01 CSCL 11/4

This report discusses the effects of advanced composite materials on avionics equipment. Over 80 reports and articles on this subject have been collected; the bibliographic data resides in an on-line computer data base. A summary of previous and ongoing work is included. The impact of composite materials on avionics systems and subsystems is discussed, and the major problem areas identified (viz., lightning, EMP protection, antenna performance, EMI/EMC, and radar cross section reduction). Possible solutions and approaches to these problems are presented and the importance of tradeoff studies at the system level is stressed. Problems peculiar to helicopters are reviewed separately. The relation of this contract to the Advanced Composite Airframe Program (ACAP) is also discussed. Appendices present technical background on interference control and E3 hardening concepts. An extensive bibliography is included. Author (GRA)

DEVELOPMENT OF ADVANCED INTERCEPTOR SUBSTRUCTURAL MATERIAL Final Report, 5 Sep. 1979 - 30 Sep. 1980
Norman R. Adsit and Julius Hertz Jul. 1981 129 p refs
(Contract DAAG46-79-C-0081; DA Proj. 1W1-62113-A-661)
(AD-A103836; AMMRC-TR-81-32) Avail: NTIS HC A07/MF A01 CSCL 11/4

The work reported herein is aimed at the development of ultra-high-modulus graphite/epoxy structures for use in future advanced*terminal interceptors (ATI). The work has shown that gore section layup used to fabricate interceptor frusta do not effect the strength or modulus of the frusta. Tests on flat panels representation of full thickness joints substantiated that the end joints will carry ATI loads. Finally, two short but full thickness frusta with antenna window cutouts were fabricated and tested. These frusta met the design goals. Analysis work has been completed and the design and materials are ready for a full-scale demonstration. To accomplish this, the preliminary design was reviewed and has been updated. A full-scale tool was designed and has been procured. Finally, a manufacturing process plan for the full-scale frustum was prepared. GRA

ADVANCED MICROSTRIP ANTENNA DEVELOPMENT. VOLUME 1: TECHNOLOGY STUDIES FOR AIRCRAFT PHASED ARRAYS Final Report, Apr. 1979 - Jun. 1980
Gary G. Sanford Jun. 1981 75 p refs
(Grant DOT-TSC-1397)
(AD-A103837; FAA-EM-80-11-Vol-1; TSC-FAA-80-15-Vol-1) Avail: NTIS HC A04/MF A01 CSCL 09/1

Work has continued on improvement of microstrip phased-array antenna technology since the first microstrip phased-array was flight-tested during the FAA 1974-1975 ATS-6 test program. The present development has extended this earlier work in three areas: the microstrip radiating elements, the array configuration, and the control circuitry. The effort has been successful in developing important new phased-array techniques. These techniques were demonstrated with working hardware, but a complete array was not within the scope of the program. Radiating elements with broad beamwidths were required to permit steering the array to angles near endfire. The most significant improvement was the development of a microstrip crossed-slot element. Dual-band or broad-band elements were developed to permit operation in both the receive and transmit bands. Several approaches were experimented with, the most promising of which was the use of stacked crossed-slot elements. This achieves broad beamwidth and dual-band operation in a compact device. Static arrays for end-fire operation were investigated, and a 4x4 array demonstrated promise for this application. Several phase shifters were developed; the three-bit switched-line phase shifters gave excellent performance. GRA

COMPUTER B (NAS-NAS) COMMUNICATIONS SUPPORT Final Report
Jul. 1981 171 p refs
(Contract DOT-FA79WA-4335)
(AD-A104145; NAC/FR-303F/01; FAA-RD-81-68) Avail: NTIS HC A08/MF A01 CSCL 17/2

An analysis has been performed to determine the feasibility and desirability of incorporating into NADIN the message traffic currently serviced by the Computer B (NAS-NAS) Network. The use of NADIN to support NAS-NAS communications was found to be feasible and cost-effective. The most attractive approach to such support was found to be the enhancement of the NADIN architecture, using packet-switching technology, to provide virtual circuit and alternate routing capabilities between all NADIN backbone modes. The results of this analysis are to serve as inputs to other tasks under this contract that will investigate a consolidated NADIN enhancement approach for supporting future FAA data communications requirements, including enhancements to support the replacement of FAA's enroute computer system, and the Remote Maintenance Monitoring System. TENT SHAPED PHASED ARRAY Interim Report
C. A. Chuang Griffiss AFB, New York RADC Jun. 1981 70 p refs
(Contract F19628-79-C-0173; AF Proj. 4600)
(AD-A103927; RADC-TR-81-116) Avail: NTIS HC A04/MF A01 CSCL 09/5

This interim report presents the study results of a tent shaped phased array SHF aircraft antenna for Satellite Communications. The antenna consists of four planer phased arrays and has a low profile streamlined configuration. The tent array provides electrical scanning over a hemisphere and is capable of high power transmission. The design of the array is a trade-off of the key parameters including antenna coverage, gain, aerodynamic impact, high power transmission, and array packaging. The detailed design considerations of these parameters are presented. A design procedure is given to derive an optimum tent array configuration. The design of a 20 dB gain tent array is discussed. This array consists of square waveguide elements, septum polarizers, ferrite and diode phase shifters, a unique feed network, and a microprocessor for array control. The array depth has a significant impact on the aerodynamic effects and array packaging. The development and design of compact array components to reduce the array depth and to provide high power capability is the key factor to the successful application of the tent array. The extension of the 20 dB gain design to a 30 dB gain array is also included. A breadboard planar array, to test the performance of the array and components, and verify the concept of the tent shaped phased array, is being implemented in this effort.

MANUAL ON THE FATIGUE OF STRUCTURES. 2: CAUSES AND PREVENTION OF DAMAGE. 7: MECHANICAL SURFACE DAMAGE
W. G. Barrois (l'Armement (Air), Vanves, France) Jun. 1981 140 p refs
(AGARD-MAN-10(ENG); ISBN-92-835-1389-4) Avail: NTIS HC A07/MF A01

Surface damage to aircraft structures is often the origin of fatigue cracks. Damage arising from decarburization and wheel grinding; friction and severe wear; rolling fatigue; contact fatigue; fretting fatigue, and erosion by solid and liquid particles and cavitation is examined. Damage in gears, cams, rails, and bearings are discussed as well as to the surface of metals transparent materials, reinforced plastics, and laminates. A.R.H.

FLIGHT TEST OF A PURE-TONE ACOUSTIC SOURCE

Arnold W. Mueller and John S. Preisser Oct. 1981 39 p refs
(NASA-TP-1898; L-14600) Avail: NTIS HC A03/MF A01 CSCL 20A

Static and flight testing of a pure-tone acoustic source were conducted in order to: (1) determine if a 4-KHz tone radiated by a source in flight and mixed with broadband aircraft flyover noise could be measured on the ground with a high degree of statistical confidence; (2) determine how well a comparison could be made of flight-to-static tone radiation pattern and a static radiation pattern; and (3) determine if there were any installation effects on the radiation pattern due to the flight vehicle. Narrow-band acoustic data were measured and averaged over eight microphones to obtain a high statistical confidence. The flight data were adjusted to an equivalent static condition by applying corrections for retarded time, spherical spreading, atmospheric absorption, ground impedance, instrumentation constraints, convective amplification, and the Doppler shift. The flight-to-static results are in excellent agreement with the measured static data. No installation effects were observed on the radiation pattern. M.G.

NOISE SUPPRESSION CHARACTERISTICS OF PERIPHERALLY SEGMENTED DUCT LINERS

Willie R. Watson Sep. 1981 43 p refs
(NASA-TP-1904; L-14521) Avail: NTIS HC A03/MF A01 CSCL 20A

The acoustic fields and transmission losses produced in semi-infinite circular ducts with peripherally segmented liners are analyzed using a series expansion of hard-wall duct modes. The coefficients of the series are computed using Galerkin's method. Unlike finite element approaches, this analysis includes the effects of realistic sources and the number of peripheral strips need not be small. It is shown that peripherally segmented liners redistribute the acoustic energy in waves composed of only a single circumferential mode at the source into other waves which contain a multitude of circumferential modes in the lined section. The accuracy of eigenfunctions computed from the analysis was observed to increase as either the frequency or radial mode order increased. The transmission losses were found to be accurate at frequencies above the cut-on value of the first-order radial mode in a hard-wall duct. The results show that for plane wave sources, peripherally segmented liners may attenuate as much sound as an optimized uniform liner at the optimal point while giving more noise suppression at most other frequencies. M.G.

COMPUTER PROGRAM TO PREDICT AIRCRAFT NOISE LEVELS

Bruce J. Clark Sep. 1981 146 p
(NASA-TP-1913; E-733) Avail: NTIS HC A07/MF A01 CSCL 20A

Methods developed at the NASA Lewis Research Center for predicting the noise contributions from various aircraft noise sources were programmed to predict aircraft noise levels either in flight or in ground tests. The noise sources include fan inlet and exhaust, jet, flap (for powered lift), core (combustor), turbine, and airframe. Noise propagation corrections are available for atmospheric attenuation, ground reflections, extra ground attenuation, and shielding. Outputs can include spectra, overall sound pressure level, perceived noise level, tone-weighted perceived noise level, and effective perceived noise level at locations specified by the user. Footprint contour coordinates and approximate footprint areas can also be calculated. Inputs and outputs can be in either System International or U.S. customary units. The subroutines for each noise source and propagation correction are described. A complete listing is given. A.R.H.

HELICOPTER NOISE ANALYSIS: ROUND-ROBIN TEST Final Report, Jan. 1980 - May 1981

Edward J. Rickley Aug. 1981 79 p refs
(AD-A103724; TSC-FAA-81-13; FAA-AEE-81-13) Avail: NTIS HC A05/MF A01 CSCL 20/1

This report documents the results of an international round robin test on the analysis of helicopter noise. Digital spectral noise data of a 3.5 second simulated helicopter flyover and identical analog test tapes containing helicopter noise data, reference signals, test tones and time code signals were sent to 13 participating organizations. The purpose of the test was to evaluate data reduction systems and procedures; to determine the magnitude of the variability between representative systems and organizations; and to identify potential causes and assist in establishing recommended procedures designed to minimize the variablity. DUAL-POWERED GAS TURBINE/ELECTRIC (GT/E) COMPUTER COMMUTER RAIL CARS: TEST, EVALUATION AND ECONOMICS Final Report

Donald Raskin, Charles Stark, and L. T. Klauder 5 Sep. 1980 52 p refs Sponsored in part by Urban Mass Transportation Administration, New York State Dept. of Transportation and AiResearch Mfg. Co.
(PB81-211757; UMTA-NY-06-0005-80-1) Avail: NTIS HC A04/MF A01 CSCL 13F

Eight prototype gas turbine/electric (GT/E) cars, four from the General Electric Co. (GE) and four from the Garrett Corp. were operated in revenue service on the Long Island Rail Road (LIRR). The design considerations that lead to the configuration of the GT/E cars and a description of the cars as built by GE and Garrett are presented. The costs of using GT/E trains to provide direct service to New York from select nonelectrified lines are compared with costs of extending electrification over those lines and operating conventional MU trains. Three rail lines are examined: the LIRR Port Jefferson and Oyster Bay branches, the Conrail's Upper Hudson to Poughkeepsie. GRA

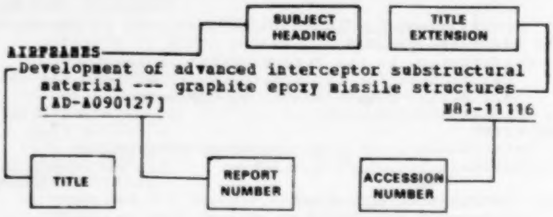
SUBJECT INDEX

AERONAUTICAL ENGINEERING / *A Continuing Bibliography (Suppl. 143)* JANUARY 1982

Typical Subject Index Listing



SUBJECT HEADING
TITLE EXTENSION
AIRFRAMES
Development of advanced interceptor substructural material --- graphite epoxy missile structures
[AD-A090127]
N81-11116
TITLE
REPORT NUMBER
ACCESSION NUMBER

The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The NASA or AIAA accession number is included in each entry to assist the user in locating the abstract in the abstract section of this supplement. If applicable, a report number is also included as an aid in identifying the document.

A

ACCIDENT INVESTIGATION
Procedural handbook for escape system/accident investigation helmet usage aspects, including failure analysis
[AD-A102803] N81-32130

ACOUSTIC ATTENUATION
Theoretical and experimental evaluation of transmission loss of cylinders
[AIAA PAPER 81-1971] A81-48612

ACOUSTIC DUCTS
Development of an analytical technique for the optimization of jet engine and duct acoustic liners
[NASA-CR-164872] N81-33205

ACOUSTIC EMISSION
The use of acoustic emission for detection of active corrosion and degraded adhesive bonding in aircraft structure
[AD-A102923] N81-32522

ACOUSTIC EXCITATION
Acoustic and turbulence measurements of a tone-excited jet with and without flight simulation
[AIAA PAPER 81-2007] A81-48640
Effect of excitation on coaxial jet noise as observed by an elliptic mirror
[AIAA PAPER 81-2044] A81-48651

ACOUSTIC MEASUREMENTS
Theoretical and experimental evaluation of transmission loss of cylinders
[AIAA PAPER 81-1971] A81-48612
Effects of blade-vane ratio and rotor-stator spacing on fan noise with forward velocity
[AIAA PAPER 81-2032] A81-48628
Comparative acoustic wind-tunnel measurements and theoretical correlations on subsonic aircraft propellers at full-scale and model-scale
[AIAA PAPER 81-2004] A81-48634

ACTIVE CONTROL
Investigation of unsteady airloads on wings with oscillating control for active control purposes
[AGARD-R-699] N81-33161

ADAPTIVE CONTROL
Adaptive features and measurement requirements for advanced surveillance radars
A81-48544

ADHESIVE BONDING
The use of acoustic emission for detection of active corrosion and degraded adhesive bonding in aircraft structure
[AD-A102923] N81-32522

AERIAL RUDDERS
Development of the carbon fiber-reinforced side rudder for the Airbus
[DGLR PAPER 81-055] A81-47551

AEROACOUSTICS
An acoustic source modelling technique to predict the near sound field of axisymmetric turbulent jets
[AIAA PAPER 81-2022] A81-48606
Contributions to the theory of side edge flap noise
[AIAA PAPER 81-2036] A81-48625

AIRCRAFT DETECTION
Aircraft recognition by means of monostatic radar A81-47142
Investigation of performance, noise and detectability characteristics of small-scale remotely piloted vehicle /RPV/ propellers [AIAA PAPER 81-2005] A81-49732
AIRCRAFT ENGINES
Computer-aided investigation of turbomachine aerodynamics and aeroelasticity A81-47962
Stability analysis of the twin mode model of coupled flexion-torsion vibrations in aeroengine fans A81-47966
Damping applications in aero-propulsion systems A81-47999
A technique for the implementation of nonlinear models as real-time digital simulations --- with application to aircraft turbine engine design A81-48333
Engine requirements for the T-37 trainer aircraft - A simulation study and analysis A81-48379
Engine noise source breakdown - Theory, simulation and results [AIAA PAPER 81-2040] A81-48620
Turbomachinery noise studies of the AiResearch QCGAT engine with inflow control --- acoustic performance [AIAA PAPER 81-2049] A81-48621
The effect of vane-frame design on rotor-stator interaction noise [AIAA PAPER 81-2034] A81-48627
Assessment of inflow control structure effectiveness and design system development [AIAA PAPER 81-2048] A81-48637
Mixer nozzle aeroacoustic characteristics for the energy efficient engine [AIAA PAPER 81-1994] A81-48639
High bypass ratio engine noise component separation by coherence technique [AIAA PAPER 81-2054] A81-48653
Propulsion energy for tomorrow's aviation A81-49161
Design of production processes for flight-vehicle engines --- Russian book A81-49475
The effect of flight and the presence of an airframe on engine exhaust noise [AIAA PAPER 81-2029] A81-49727
The Lear Fan 2100 A81-49975
Graphite/polyimide augmentor and nozzle components --- of advanced military gas turbine engines [AIAA PAPER 81-1358] A81-49976
Unsteady swirling flows in gas turbines --- aircraft engines and aeroacoustics [AD-A102852] N81-32150
Multi-mission STOVL with vectored thrust engines N81-33149
Noise suppression characteristics of peripherally segmented duct liners [NASA-TP-1904] N81-33946
AIRCRAFT EQUIPMENT
Analysis of the operation of air turborefrigeration plants and their use for on-the-ground air-conditioning of aircraft A81-48196
Aircraft electricity and electronics /3rd edition/ --- Book A81-49877
Cost benefit and failure criticality analyses of the Standard Avionics Integrated Control System (SAICS) concept [AD-A102197] N81-32144
Wind tunnel testing of a windshield material or supersonic aircraft [AD-A103363] N81-33163
AIRCRAFT FUEL SYSTEMS
The relation between aircraft fuel reserves and navigation A81-47843
Numerical simulation of hydrodynamic ram --- for aircraft fuel tanks A81-48351
AIRCRAFT FUELS
Propulsion energy for tomorrow's aviation A81-49161
AIRCRAFT GUIDANCE
The use of direct lift control of an aircraft in a guided landing run A81-49928
AIRCRAFT INDUSTRY
Forecast of future aviation fuels: The model [NASA-CR-165486] N81-32956
AIRCRAFT INSTRUMENTS
Instrumentation for measurement of flow properties on a swept wing in flight [DGLR PAPER 81-034] A81-47585
Onboard procedure for the measurement of wind shear gradients [DGLR PAPER 81-060] A81-47612
Civil head-up displays - Coming up fast A81-49973
Simulator evaluation of separation of display parameters in path-following tasks [NASA-TP-1915] N81-33203
AIRCRAFT LANDING
Influence of landing gear flexibility on aircraft performance during ground roll A81-49375
The use of direct lift control of an aircraft in a guided landing run A81-49928
Realization of a method of extremal targeting in a problem of aircraft landing control A81-49943
Flight evaluation of the STOL flare and landing during night operations [NASA-TM-81312] N81-32151
An experimental investigation of VTOL flying qualities requirements or shipboard landings [AD-A104137] N81-33199
Simulator evaluation of the effects of reduced spoiler and thrust authority on a decoupled longitudinal control system during landings in wind shear [NASA-TM-83188] N81-33211
AIRCRAFT MAINTENANCE
Simulation model to evaluate maintenance strategies for large network of fielded systems A81-48009
F-100s set to become target drones A81-48067
Engine requirements for the T-37 trainer aircraft - A simulation study and analysis A81-48379
Estimating aircraft depot maintenance costs [AD-A103623] N81-33133
A study of the factors affecting productivity at the Naval Air Rework Facilities [AD-A103783] N81-33134
A prescriptive model for resource allocation at the intermediate level engine facility [AD-A103785] N81-33135
Development of maintenance metrics to forecast resource demands of weapon systems [AD-A104089] N81-33136
AIRCRAFT MANEUVERS
Active gust- and maneuver load control concepts, taking into account, as example, the Airbus A300. I - Design of a controller in the temporal domain for the alleviation of gust loads and the control of the effectiveness for stochastic gusts [DGLR PAPER 81-065A] A81-47552
Active gust- and maneuver load reduction concepts, taking into account, as an example, the Airbus A300. II - Design of a controller for gust and maneuver load reduction in the frequency range [DGLR PAPER 81-065B] A81-47553
Captive aircraft testing at high angles of attack [AD-A103108] N81-32140
Development of an aircraft maneuver load spectrum based on VGH data [AD-A102750] N81-32142
AIRCRAFT MODELS
Design and construction of a model which is dynamically similar to the A310 wing [DGLR PAPER 81-035] A81-47556
AIRCRAFT NOISE
Procedure for evaluation of engine isolators for reduced structure-borne interior noise transmission [AIAA PAPER 81-1970] A81-48608
Theoretical and experimental evaluation of transmission loss of cylinders [AIAA PAPER 81-1971] A81-48612

Tip geometry effects on the model helicopter rotor low frequency broadband noise
[AIAA PAPER 81-2003] A81-48615

Flight test of the 747-JT9D for airframe and jet-flap interaction noise
[AIAA PAPER 81-2037] A81-48629

Comparison of predicted engine core noise with current and proposed aircraft noise certification requirements
[AIAA PAPER 81-2053] A81-48635

A novel airborne technique for free-field measurements of aircraft noise above the flight path with application to noise-shielding studies
[AIAA PAPER 81-2028] A81-48647

Investigation of performance, noise and detectability characteristics of small-scale remotely piloted vehicle /RPV/ propellers
[AIAA PAPER 81-2005] A81-49732

Flight test of a pure-tone acoustic source --- aircraft noise
[NASA-TP-1898] N81-33945

Helicopter noise analysis: Round-robin test
[AD-A103724] N81-33948

AIRCRAFT PARTS

The use of acoustic emission for detection of active corrosion and degraded adhesive bonding in aircraft structure
[AD-A102923] N81-32522

AIRCRAFT PERFORMANCE

The relation between aircraft fuel reserves and navigation
A81-47843

Performance prediction for light airplanes
A81-49374

Influence of landing gear flexibility on aircraft performance during ground roll
A81-49375

Sukhoi Su-24 Fencer - The Soviet Tornado
A81-49974

Design of optimal inputs for the identification of characteristics of aircraft flights --- parameter identification control theory
N81-33131

Vertical lift capabilities for the 80's and 90's
N81-33139

Ten years of US Marine Corps Harrier operations
N81-33140

Historical overview of V/STOL aircraft technology
N81-33143

Recent progress in V/STOL aircraft technology
N81-33144

Multi-mission STOVL with vectored thrust engines
N81-33149

Mission potential of derivatives of the XV-15 tilt rotor research aircraft
N81-33150

Statistics of some atmospheric turbulence records relevant to aircraft response calculations
[NASA-CR-3464] N81-33191

AIRCRAFT PRODUCTION

Damage recognition and localization by means of differential modal analysis
[DGLR PAPER 81-056] A81-47603

Design of production processes for flight-vehicle engines --- Russian book
A81-49475

AIRCRAFT SAFETY

Improving the crashworthiness of general aviation aircraft by crash injury investigations
[AD-A103316] N81-33174

Test and evaluation of an experimental feasibility prototype passive seat mounted limb restraint system
[AD-A104161] N81-33177

AIRCRAFT STABILITY

Parametric synthesis of an automatic system for flight-vehicle stabilization
A81-49940

AIRCRAFT STRUCTURES

A formulation of the shimmy problem for swiveling wheels
A81-47268

Measures for increasing the service life of riveted, aircraft-relevant joints
[DGLR PAPER 81-052] A81-47564

Recognizing defects in carbon-fiber-reinforced plastics
[DGLR PAPER 81-057] A81-47565

High peak energy shaped-pulse electromagnetic crack detection
A81-47785

Developing design allowables for composite helicopter structures
A81-47811

Cost-effective mechanical property characterization
A81-47813

A practical probabilistic method for evaluating the fail-safeness of structures that may fail due to fatigue
A81-47888

Sliding-seal electron beam slot welding of an aircraft wing closure beam
A81-48142

Stress concentration in elements of aircraft structures --- Russian book
A81-49471

The effect of the skewness of the skin panels on stresses in conical wings
A81-49930

Geometrically nonlinear theory for calculating thin rods of a wing profile
A81-49935

Strength calculation of thin-wall rods of significant taper
A81-49937

Manual on the fatigue of structures. 2: Causes and prevention of damage. 7: Mechanical surface damage --- aircraft structures
[AGARD-MAN-10(ENG)] N81-33503

AIRCRAFT SURVIVABILITY

Fielding of an advanced helicopter. The UH-60A Black Hawk: Initial operational experience
N81-33141

Views on V/STOL tactical fighter aircraft: Technology needs and relationships to the runway denial problems
N81-33142

The consequences of certain operational requirements on the conceptual design of combat helicopters
N81-33153

AIRFOILS

On the spanwise uniformity of wind tunnel test data of transonic airfoils
[NAL-TR-665] N81-32118

AIRFRAME MATERIALS

Anti-symmetric elastic properties of composite plates of satin weave cloth
[NAL-TR-649T] N81-33238

AIRFRAMES

Prediction of jet exhaust noise on airframe surfaces during flight
[AIAA PAPER 81-2035] A81-48626

The effect of flight and the presence of an airframe on engine exhaust noise
[AIAA PAPER 81-2029] A81-49727

Engineering effects of advanced composite materials on avionics
[AD-A104015] N81-33240

AIRPORT PLANNING

Simulation model to evaluate maintenance strategies for large network of fielded systems
A81-48009

Upgraded FAA Airfield Capacity Model. Volume 1: Supplemental user's guide
[AD-A104154] N81-33216

Upgraded FAA Airfield Capacity Model. Volume 2: Technical description of revisions
[AD-A104155] N81-33217

AIRPORTS

Determination of cargo container inventories through logistics simulation --- for air shipment
A81-48380

Unrepresentative temperatures at a first-order meteorological station Washington National Airport
A81-48847

Water-compatible polymer concrete materials for use in rapid repair systems for airport runways
[AD-A102873] N81-32273

AIRSPACE

Development of a heliport classification method and an analysis of heliport real estate and airspace requirements
[AD-A102521] N81-32158

AIRSPEED
The influence of the airspeed on jet turbulence and the consequences for the jet noise
[DGLR PAPER 81-021] A81-47595
Development of an instrument for the accurate measurement of aircraft airspeed and altitude
[AD-A103421] N81-33204
ALL-WEATHER AIR NAVIGATION
Ten years activity in the area of flight control for helicopters at night and in bad weather
[DGLR PAPER 81-064] A81-47620
Controls and displays for all-weather operation of helicopters
N81-33145
ALPHA JET AIRCRAFT
Employment of development simulation for the realization of direct side force control in the case of an attack aircraft
[DGLR PAPER 81-063] A81-47580
ALUMINUM COATINGS
A process for protecting gas turbine blade cooling passages against degradation
A81-49209
ANECHOIC CHAMBERS
Effects of blade-vane ratio and rotor-stator spacing on fan noise with forward velocity
[AIAA PAPER 81-2032] A81-48628
ANGULAR VELOCITY
Choice of the optimal angular velocity of the twist of a flight vehicle
A81-49946
ANTENNA ARRAYS
Hyperbolic origins --- of radio position-fixing systems
A81-47842
Simulation of Microwave Landing System
A81-48368
ANTENNA RADIATION PATTERNS
Hyperbolic origins --- of radio position-fixing systems
A81-47842
A simple radar for navigation accuracy measurements
A81-47844
ANTISUBMARINE WARFARE AIRCRAFT
Design for maximum effectiveness in the Navy role
N81-33154
APPROACH
Takeoff and missed approach under the influence of wind shear --- flight safety considerations
[TUBS/SFB-58-80-05-01] N81-32131
APPROACH CONTROL
Flight evaluation of the STOL flare and landing during night operations
[NASA-TM-81312] N81-32151
ARCHITECTURE (COMPUTERS)
The array processor - A real-time simulator
A81-48328
ASPECT RATIO
Effect of sweep and aspect ratio on the longitudinal aerodynamics of a spanloader wing in and out of ground effect --- wind tunnel tests
[NASA-TM-80199] N81-32119
ATMOSPHERIC ENTRY
Choice of the optimal angular velocity of the twist of a flight vehicle
A81-49946
ATMOSPHERIC TEMPERATURE
Unrepresentative temperatures at a first-order meteorological station Washington National Airport
A81-48847
ATMOSPHERIC TURBULENCE
Statistics of some atmospheric turbulence records relevant to aircraft response calculations
[NASA-CR-3464] N81-33191
ATTACK AIRCRAFT
Employment of development simulation for the realization of direct side force control in the case of an attack aircraft
[DGLR PAPER 81-063] A81-47580
Combat cockpit design
A81-49173
Sukhoi Su-24 Fencer - The Soviet Tornado
A81-49974
Multi-mission STOVL with vectored thrust engines
N81-33149
AURORAL ZONES
Errors of phase VLF-navigation systems under conditions of auroral disturbances
A81-47533
AUTOMATIC CONTROL
Automation of air traffic control processes --- Russian book
A81-49462
Controls and displays for all-weather operation of helicopters
N81-33145
AUTOMATIC FLIGHT CONTROL
Application of optimal control and estimation to autopilot and autothrottle systems
A81-48371
Combat cockpit design
A81-49173
Parametric synthesis of an automatic system for flight-vehicle stabilization
A81-49940
AUTOMATIC PILOTS
Application of optimal control and estimation to autopilot and autothrottle systems
A81-48371
AUTOMATION
Automation of air traffic control processes --- Russian book
A81-49462
AVAILABILITY
Availability requirements of the future ATC system
A81-48558
AVIONICS
Optimization of simulation models for avionics software verification
A81-48373
Development considerations for real-time aircraft/avionic distributed computer control systems
A81-48376
Aircraft electricity and electronics /3rd edition/ --- Book
A81-49877
Software survey for the avionics test bed --- for large space structures
[NASA-CR-161089] N81-32143
Cost benefit and failure criticality analyses of the Standard Avionics Integrated Control System (SAICS) concept
[AD-A102197] N81-32144
Engineering effects of advanced composite materials on avionics
[AD-A104015] N81-33240
AXIAL FLOW TURBINES
Some modal-frequency spectra of fan noise
[AIAA PAPER 81-1990] A81-48636
AXISYMMETRIC FLOW
An acoustic source modelling technique to predict the near sound field of axisymmetric turbulent jets
[AIAA PAPER 81-2022] A81-48606

B

BASE PRESSURE
Sting interference effects on the static dynamic and base pressure measurements of the standard dynamics model aircraft at Mach numbers 0.3 through 1.3
[AD-A102612] N81-32124
BEAMS (SUPPORTS)
Sliding-seal electron beam-slot welding of an aircraft wing closure beam
A81-48142
BEARINGLESS ROTORS
A full-scale wind tunnel investigation of a helicopter bearingless main rotor --- Ames 40 by 80 Wind Tunnel
[NASA-TM-81321] N81-32137
BIBLIOGRAPHIES
Published results of the program of university research. Transportation research results
[PB81-210130] N81-34108
Ames Research Center publications: A continuing bibliography, 1980
[NASA-TM-81308] N81-34138
BIRD-AIRCRAFT COLLISIONS
Alternate T-38 transparency development. Part 1: Initial analysis and design
[AD-A103261] N81-33196
Alternate T-38 transparency development. Part 2: Baseline birdstrike testing
[AD-A103262] N81-33197

BLADE TIPS
The calculation of transonic blade tip flow at helicopter rotors
[DGLR PAPER 81-025] A81-47554
Tip geometry effects on the model helicopter rotor low frequency broadband noise
[AIAA PAPER 81-2003] A81-48615

BO-105 HELICOPTER
The impact of helicopter flight mechanics on mission performance
N81-33148

BOEING 747 AIRCRAFT
Flight test of the 747-JT9D for airframe and jet-flap interaction noise
[AIAA PAPER 81-2037] A81-48629
Ground effects on aircraft noise for a wide-body commercial airplane
[AIAA PAPER 81-1588] A81-48638

BOUNDARY LAYER CONTROL
Program of research in laminar flow control in the JIAFS at NASA Langley Research Center
[NASA-CR-164843] N81-32121

BOUNDARY LAYER FLOW
Surface-oriented coordinates for boundary-layer calculations in the case of general configurations
[DGLR PAPER 81-014] A81-47557
Trailing edge noise prediction from measured surface pressures
A81-48395

BOXES (CONTAINERS)
Determination of cargo container inventories through logistics simulation --- for air shipment
A81-48380

BYPASS RATIO
Propulsion energy for tomorrow's aviation
A81-49161

C

C-130 AIRCRAFT
Safety study: Prime Nuclear Airlift Force (PNAF) missions involving the use of C-130 and C-141 aircraft
[AD-A103282] N81-33173

C-141 AIRCRAFT
Safety study: Prime Nuclear Airlift Force (PNAF) missions involving the use of C-130 and C-141 aircraft
[AD-A103282] N81-33173

CAMERAS
Probe protection in camera/model visual systems --- for helicopter flight simulators
A81-48359

CANADA
V/STOL aircraft technology in Canada
N81-33152

CANOPIES
Alternate T-38 transparency development. Part 1: Initial analysis and design
[AD-A103261] N81-33196
Alternate T-38 transparency development. Part 2: Baseline birdstrike testing
[AD-A103262] N81-33197

CANTILEVER BEAMS
Strength calculation of thin-wall rods of significant taper
A81-49937

CAPACITY
Upgraded FAA Airfield Capacity Model. Volume 1: Supplemental user's guide
[AD-A104154] N81-33216
Upgraded FAA Airfield Capacity Model. Volume 2: Technical description of revisions
[AD-A104155] N81-33217

CAPTIVE TESTS
Captive aircraft testing at high angles of attack
[AD-A103108] N81-32140

CARBON FIBER REINFORCED PLASTICS
Development of the carbon fiber-reinforced side rudder for the Airbus
[DGLR PAPER 81-055] A81-47551
Recognizing defects in carbon-fiber-reinforced plastics
[DGLR PAPER 81-057] A81-47565

CARGO
Safety study: Prime Nuclear Airlift Force (PNAF) missions involving the use of C-130 and C-141 aircraft
[AD-A103282] N81-33173

CARGO AIRCRAFT
Wind-tunnel studies of advanced cargo aircraft concepts --- leading edge vortex flaps for drag reduction
[NASA-CR-164833] N81-32117

CASCADE FLOW
Numerical experiments on unsteady flows through vibrating cascades
A81-47961
On the numerical analysis of stall flutter in turbine cascade
A81-47963

CEILINGS (ARCHITECTURE)
Emergency cabin lighting installations: An analysis of ceiling- versus lower cabin-mounted lighting during evacuation trials --- visibility
[AD-A103191] N81-33175

CELESTIAL NAVIGATION
An analytical solution of the two star sight problem of celestial navigation
A81-48121

CERTIFICATION
Comparison of predicted engine core noise with current and proposed aircraft noise certification requirements
[AIAA PAPER 81-2053] A81-48635

CIRCULATION CONTROL AIRFOILS
Investigation of the circulation control wing/upper surface blowing high-lift system on a low aspect ratio semispan model
[AD-A103090] N81-32128

CIVIL AVIATION
The relation between aircraft fuel reserves and navigation
A81-47843
Commercial airliners - Design and flight operation
A81-49575
Civil head-up displays - Coming up fast
A81-49973
Forecast of future aviation fuels: The model
[NASA-CR-165486] N81-32956

CLASSIFICATIONS
Development of a heliport classification method and an analysis of heliport real estate and airspace requirements
[AD-A102521] N81-32158

COAXIAL FLOW
An improved prediction method for noise generated by conventional profile coaxial jets
[AIAA PAPER 81-1991] A81-49743

COAXIAL NOZZLES
Effect of excitation on coaxial jet noise as observed by an elliptic mirror
[AIAA PAPER 81-2044] A81-48651

COCKPIT SIMULATORS
Probe protection in camera/model visual systems --- for helicopter flight simulators
A81-48359
Time delays in flight simulator visual displays
A81-48369
Simulator evaluation of the effects of reduced spoiler and thrust authority on a decoupled longitudinal control system during landings in wind shear
[NASA-TM-83188] N81-33211

COCKPITS
Combat cockpit design
A81-49173

COHERENT ACOUSTIC RADIATION
High bypass ratio engine noise component separation by coherence technique
[AIAA PAPER 81-2054] A81-48653

COHERENT RADAR
Infrared airborne radar
A81-48566

COLLISION AVOIDANCE
A simple radar for navigation accuracy measurements
A81-47844

COMBAT
Ten years of US Marine Corps Harrier operations
N81-33140
The consequences of certain operational requirements on the conceptual design of combat helicopters
N81-33153

COMBUSTION EFFICIENCY
Hydrogen engines
A81-49949

COMMERCIAL AIRCRAFT
Commercial airliners - Design and flight operation
A81-49575
Responses to comments of Air Transport Association of America on aircraft towing feasibility study
[DE81-029834] N81-33201
COMMUNICATION EQUIPMENT
COMLINK - A communications/EW analytical and modeling tool
A81-48547
COMMUNICATION NETWORKS
Computer B (NAS-NAS) communications support
[AD-A104145] N81-33392
COMPLEX SYSTEMS
A fail-operational duplex sensor concept for flight control systems on the basis of analytical redundancy
[DGLR PAPER 81-066] A81-47616
COMPOSITE MATERIALS
Water-compatible polymer concrete materials for use in rapid repair systems for airport runways
[AD-A102873] N81-32273
Applications of composite materials for the construction of military helicopters
N81-33147
Advanced composite aircraft electromagnetic design and synthesis
[SAND-81-1278C] N81-33200
Engineering effects of advanced composite materials on avionics
[AD-A104015] N81-33240
COMPOSITE STRUCTURES
The use of acoustic emission for detection of active corrosion and degraded adhesive bonding in aircraft structure
[AD-A102923] N81-32522
Anti-symmetric elastic properties of composite plates of satin weave cloth
[NAL-TR-649T] N81-33238
Engineering effects of advanced composite materials on avionics
[AD-A104015] N81-33240
Development of advanced interceptor substructural material
[AD-A103836] N81-33241
COMPRESSIBILITY EFFECTS
Vortex bursting on slender delta wings in transonic flow and its influence on missile aerodynamic characteristics
[DGLR PAPER 81-047] A81-47622
COMPRESSOR BLADES
Damping of turbomachine blade variations by subsonic flow
A81-47957
COMPUTATIONAL FLUID DYNAMICS
Computational fluid mechanics and its impact on the aircraft aerodynamicist
[DGLR PAPER 81-003] A81-47621
Numerical experiments on unsteady flows through vibrating cascades
A81-47961
Digital simulation for energy conservation in a large wind tunnel plant system
A81-48003
Evaluation of two-dimensional subsonic oscillatory airforce coefficients and loading distributions
A81-48480
Calculation of the aerodynamic characteristics of a deformable wing, moving near a screen
A81-49948
Comparison of computational and experimental jet effects
[AIAA PAPER 81-1492] A81-49979
Analysis and design of supersonic aircraft based on inviscid nonlinear Eulerian equations. Part 1: Rotational Euler solutions with explicit shock fitting
[AD-A103434] N81-33192
COMPUTER GRAPHICS
Computer graphics applications
[PB81-215246] N81-33188
COMPUTER NETWORKS
Availability requirements of the future ATC system
A81-48558
COMPUTER PROGRAMS
Choice of optimal parameters of a gyrovertical on the basis of a standard program
A81-48744
User's manual for a computer program to calculate discrete frequency noise of conventional and advanced propellers
[NASA-TM-83135] N81-32966
Computer program to predict aircraft noise levels
[NASA-TP-1913] N81-33947
Ames Research Center publications: A continuing bibliography, 1980
[NASA-TM-81308] N81-34138
COMPUTER SYSTEMS DESIGN
The array processor - A real-time simulator
A81-48328
Development considerations for real-time aircraft/avionic distributed computer control systems
A81-48376
COMPUTER TECHNIQUES
Computational fluid mechanics and its impact on the aircraft aerodynamicist
[DGLR PAPER 81-003] A81-47621
A simple radar for navigation accuracy measurements
A81-47844
Computer-aided investigation of turbomachine aerodynamics and aeroelasticity
A81-47962
COMPUTERIZED DESIGN
Computational fluid mechanics and its impact on the aircraft aerodynamicist
[DGLR PAPER 81-003] A81-47621
A technique for the implementation of nonlinear models as real-time digital simulations --- with application to aircraft turbine engine design
A81-48333
Structural synthesis - Its genesis and development
A81-49076
Development of an aircraft maneuver load spectrum based on VGH data
[AD-A102750] N81-32142
Software survey for the avionics test bed --- for large space structures
[NASA-CR-161089] N81-32143
COMPUTERIZED SIMULATION
Simulation model to evaluate maintenance strategies for large network of fielded systems
A81-48009
The array processor - A real-time simulator
A81-48328
Function generation techniques --- in real time hybrid simulations
A81-48329
Numerical simulation of hydrodynamic ram --- for aircraft fuel tanks
A81-48351
Simulation of Microwave Landing System
A81-48368
Optimization of simulation models for avionics software verification
A81-48373
Engine requirements for the T-37 trainer aircraft - A simulation study and analysis
A81-48379
Determination of cargo container inventories through logistics simulation --- for air shipment
A81-48380
Adaptive features and measurement requirements for advanced surveillance radars
A81-48544
COMLINK - A communications/EW analytical and modeling tool
A81-48547
CONCRETES
Water-compatible polymer concrete materials for use in rapid repair systems for airport runways
[AD-A102873] N81-32273
CONFERENCES
Test methods and design allowables for fibrous composites; Proceedings of the Symposium, Dearborn, MI, October 2, 3, 1979
A81-47801
Damping applications for vibration control; Proceedings of the Winter Annual Meeting, Chicago, IL, November 16-21, 1980
A81-47993
The Impact of Military Applications on Rotorcraft and V/STOL Aircraft Design
[AGARD-CP-313] N81-33137

CONICAL BODIES
The effect of the skewness of the skin panels on stresses in conical wings A81-49930

CONTROL SIMULATION
Employment of development simulation for the realization of direct side force control in the case of an attack aircraft [DGLR PAPER 81-063] A81-47580
Model following control of gas turbine engines A81-49900
Realization of a method of extremal targeting in a problem of aircraft landing control A81-49943

CONTROL SURFACES
Active gust- and maneuver load control concepts, taking into account, as example, the Airbus A300. I - Design of a controller in the temporal domain for the alleviation of gust loads and the control of the effectiveness for stochastic gusts [DGLR PAPER 81-065A] A81-47552
Active gust- and maneuver load reduction concepts, taking into account, as an example, the Airbus A300. II - Design of a controller for gust and maneuver load reduction in the frequency range [DGLR PAPER 81-065B] A81-47553

CONTROL THEORY
Estimation of kinetic quantities of flight mechanics with a nonlinear observer [DGLR PAPER 81-067] A81-47562
Application of optimal control and estimation to autopilot and autothrottle systems A81-48371

CONTROLLABILITY
Statistics of some atmospheric turbulence records relevant to aircraft response calculations [NASA-CR-3464] N81-33191

CONVERGENT-DIVERGENT NOZZLES
Flight effects on supersonic convergent-divergent nozzle jet noise [AIAA PAPER 81-2027] A81-49728

COOLING FINS
New developments in compact plate-fin heat exchangers A81-48062

COOLING SYSTEMS
Analysis of the operation of air turborefrigeration plants and their use for on-the-ground air-conditioning of aircraft A81-48196

COORDINATE TRANSFORMATIONS
The role of the earth's shape in navigation - An example A81-48120

CORROSION
The use of acoustic emission for detection of active corrosion and degraded adhesive bonding in aircraft structure [AD-A102923] N81-32522
Manual on the fatigue of structures. 2: Causes and prevention of damage. 7: Mechanical surface damage --- aircraft structures [AGARD-MAN-10(ENG)] N81-33503

COST EFFECTIVENESS
Cost-effective mechanical property characterization A81-47813

COST ESTIMATES
Estimating aircraft depot maintenance costs [AD-A103623] N81-33133

COUPLED MODES
Stability analysis of the twin mode model of coupled flexion-torsion vibrations in aeroengine fans A81-47966

CRACK PROPAGATION
A practical probabilistic method for evaluating the fail-safeness of structures that may fail due to fatigue A81-47888

CRACKING (FRACTURING)
High peak energy shaped-pulse electromagnetic crack detection A81-47785
Fabric installation to minimize reflection crack on taxiways at Thule Airbase, Greenland [AD-A103737] N81-33214

CRASH INJURIES
Improving the crashworthiness of general aviation aircraft by crash injury investigations [AD-A103316] N81-33174

CROSSTALK
Crosstalk levels of speech plus data in Remote Communication Air-Ground (RCAG) [AD-A103351] N81-33182

CRUCIFORM WINGS
Solar powered aircraft [NASA-CASE-LAR-12615-1] N81-32138

CRUISING FLIGHT
Prediction of range and endurance of jet aircraft at constant altitude A81-47725

CYLINDRICAL BODIES
Strength calculation of thin-wall rods of significant taper A81-49937

CYLINDRICAL SHELLS
Theoretical and experimental evaluation of transmission loss of cylinders [AIAA PAPER 81-1971] A81-48612

D

DAMAGE
Damage recognition and localization by means of differential modal analysis [DGLR PAPER 81-056] A81-47603
Manual on the fatigue of structures. 2: Causes and prevention of damage. 7: Mechanical surface damage --- aircraft structures [AGARD-MAN-10(ENG)] N81-33503

DATA ACQUISITION
Data acquisition and analysis system as a training device for simulated conventional weapon delivery [NLR-MP-80027-U] N81-32164

DATA LINKS
Crosstalk levels of speech plus data in Remote Communication Air-Ground (RCAG) [AD-A103351] N81-33182

DATA PROCESSING
En route discrete address beacon system/air traffic control (Build 1) technical testing [AD-A103894] N81-33183

DATA PROCESSING EQUIPMENT
Data acquisition and analysis system as a training device for simulated conventional weapon delivery [NLR-MP-80027-U] N81-32164

DATA REDUCTION
On the spanwise uniformity of wind tunnel test data of transonic airfoils [NAL-TR-665] N81-32118

DEFECTS
The use of acoustic emission for detection of active corrosion and degraded adhesive bonding in aircraft structure [AD-A102923] N81-32522

DEGREES OF FREEDOM
Simulator evaluation of separation of display parameters in path-following tasks [NASA-TP-1915] N81-33203

DELTA WINGS
Investigations of vortex formation on wings with cropped leading edges [DGLR PAPER 81-046] A81-47601
Vortex bursting on slender delta wings in transonic flow and its influence on missile aerodynamic characteristics [DGLR PAPER 81-047] A81-47622
Measured pressure distributions and shock shapes on a simple delta wing A81-48479
Experimental and theoretical study of three interacting, closely-spaced, sharp-edged 60 deg delta wings at low speeds [NASA-CR-3460] N81-33160

DH 125 AIRCRAFT
The effect of flight and the presence of an airframe on engine exhaust noise [AIAA PAPER 81-2029] A81-49727

DIFFRACTION PATTERNS
An original method for the analysis of the power diffraction pattern of a radar target for shape recognition purposes A81-47143

DIGITAL FILTERS
Characteristics of a digital filter for a precision DME system in microwave landing systems
[FUB-43-1980] N81-32136

DIGITAL SIMULATION
Digital simulation for energy conservation in a large wind tunnel plant system
A81-48003
A technique for the implementation of nonlinear models as real-time digital simulations --- with application to aircraft turbine engine design
A81-48333
The evolution of real-time digital simulation of aircraft for training applications
A81-48358
Model following control of gas turbine engines
A81-49900

DIGITAL SYSTEMS
Crosstalk levels of speech plus data in Remote Communication Air-Ground (RCAG)
[AD-A103351] N81-33182

DISCRETE ADDRESS BEACON SYSTEM
Multisite testing of the Discrete Address Beacon System (DABS)
[AD-A103575] N81-33181
En route discrete address beacon system/air traffic control (Build 1) technical testing
[AD-A103894] N81-33183

DISPLAY DEVICES
Time delays in flight simulator visual displays
A81-48369
Controls and displays for all-weather operation of helicopters
N81-33145

DRAG MEASUREMENT
Contribution to the determination of the drag coefficient for air breathing flight vehicles on the basis of wind tunnel measurements
[DGLR PAPER 81-036] A81-47604
Determination of thrust and throttle-dependent drag for fighter aircraft
[AIAA PAPER 81-1692] A81-48417

DRAG REDUCTION
Wind-tunnel studies of advanced cargo aircraft concepts --- leading edge vortex flaps for drag reduction
[NASA-CR-164833] N81-32117

DUCTED FAN ENGINES
Ray-theory predictions of the sound radiated from realistic engine intakes
[AIAA PAPER 81-1982] A81-48602

DUCTED FANS
The effect of vane-frame design on rotor-stator interaction noise
[AIAA PAPER 81-2034] A81-48627

DUCTS
Noise suppression characteristics of peripherally segmented duct liners
[NASA-TP-1904] N81-33946

DYNAMIC MODELS
Simulation model to evaluate maintenance strategies for large network of fielded systems
A81-48009

DYNAMIC STRUCTURAL ANALYSIS
Damping applications for vibration control; Proceedings of the Winter Annual Meeting, Chicago, IL, November 16-21, 1980
A81-47993
Finite strip analysis of singly curved skin-stringer structures
A81-48390

E

ECONOMETRICS
Forecast of future aviation fuels: The model
[NASA-CR-165486] N81-32956

EDDY CURRENTS
High peak energy shaped-pulse electromagnetic crack detection
A81-47785

EJECTION SEATS
Test and evaluation of an experimental feasibility prototype passive seat mounted limb restraint system
[AD-A104161] N81-33177

ELASTIC PLATES
Transient vibrations of elastic panels due to the impact of shock waves
A81-48385

ELASTIC PROPERTIES
Anti-symmetric elastic properties of composite plates of satin weave cloth
[NAL-TR-649T] N81-33238

ELECTRIC HYBRID VEHICLES
Dual-powered Gas Turbine/Electric (GT/E) computer commuter rail cars: Test, evaluation and economics
[PB81-211757] N81-34109

ELECTRIC PROPULSION
Dual-powered Gas Turbine/Electric (GT/E) computer commuter rail cars: Test, evaluation and economics
[PB81-211757] N81-34109

ELECTRICAL ENGINEERING
Aircraft electricity and electronics /3rd edition/ --- Book
A81-49877

ELECTRICITY
Aircraft electricity and electronics /3rd edition/ --- Book
A81-49877

ELECTROMAGNETIC PULSES
High peak energy shaped-pulse electromagnetic crack detection
A81-47785
Advanced composite aircraft electromagnetic design and synthesis
[SAND-81-1278C] N81-33200

ELECTROMAGNETISM
Aircraft electricity and electronics /3rd edition/ --- Book
A81-49877

ELECTRON BEAM WELDING
Sliding-seal electron beam slot welding of an aircraft wing closure beam
A81-48142

ELECTRONIC CONTROL
Fly-by-wire Jaguar
A81-48064

ELECTRONIC EQUIPMENT TESTS
Software survey for the avionics test bed --- for large space structures
[NASA-CR-161089] N81-32143

ELECTRONICS
Aircraft electricity and electronics /3rd edition/ --- Book
A81-49877

EMERGENCIES
Emergency cabin lighting installations: An analysis of ceiling- versus lower cabin-mounted lighting during evacuation trials --- visibility
[AD-A103191] N81-33175

ENERGY CONSERVATION
Digital simulation for energy conservation in a large wind tunnel plant system
A81-48003
Analysis of the performance of the drive system and diffuser of the Langley unitary plan wind tunnel
[NASA-TM-83168] N81-33158
Responses to comments of Air Transport Association of America on aircraft towing feasibility study
[DE81-029834] N81-33201

ENERGY REQUIREMENTS
Analysis of the performance of the drive system and diffuser of the Langley unitary plan wind tunnel
[NASA-TM-83168] N81-33158

ENGINE CONTROL
Turbomachinery noise studies of the AiResearch QCGAT engine with inflow control --- acoustic performance
[AIAA PAPER 81-2049] A81-48621
Model following control of gas turbine engines
A81-49900

ENGINE DESIGN
A technique for the implementation of nonlinear models as real-time digital simulations --- with application to aircraft turbine engine design
A81-48333
Assessment of inflow control structure effectiveness and design system development
[AIAA PAPER 81-2048] A81-48637

Propulsion energy for tomorrow's aviation
A81-49161

Hydrogen engines
A81-49949

Design and evaluation of an integrated Quiet, Clean General Aviation Turbofan (QCGAT) engine and aircraft propulsion system
[NASA-CR-165185] N81-32147

Multi-mission STOVL with vectored thrust engines
N81-33149

Simplified off-design performance model of a day turbofan engine cycle
[NASA-TM-83204] N81-33206

ENGINE FAILURE

Engine requirements for the T-37 trainer aircraft - A simulation study and analysis
A81-48379

ENGINE NOISE

Procedure for evaluation of engine isolators for reduced structure-borne interior noise transmission
[AIAA PAPER 81-1570] A81-48608

Laboratory study of efficient add-on treatments for interior noise control in light aircraft
[AIAA PAPER 81-1969] A81-48618

Engine noise source breakdown - Theory, simulation and results
[AIAA PAPER 81-2040] A81-48620

Turbomachinery noise studies of the AiResearch QCGAT engine with inflow control --- acoustic performance
[AIAA PAPER 81-2049] A81-48621

The effect of vane-frame design on rotor-stator interaction noise
[AIAA PAPER 81-2034] A81-48627

Effects of blade-vane ratio and rotor-stator spacing on fan noise with forward velocity
[AIAA PAPER 81-2032] A81-48628

Comparative acoustic wind-tunnel measurements and theoretical correlations on subsonic aircraft propellers at full-scale and model-scale
[AIAA PAPER 81-2004] A81-48634

Comparison of predicted engine core noise with current and proposed aircraft noise certification requirements
[AIAA PAPER 81-2053] A81-48635

Some modal-frequency spectra of fan noise
[AIAA PAPER 81-1990] A81-48636

Mixer nozzle aeroacoustic characteristics for the energy efficient engine
[AIAA PAPER 81-1994] A81-48639

Effect of excitation on coaxial jet noise as observed by an elliptic mirror
[AIAA PAPER 81-2044] A81-48651

High bypass ratio engine noise component separation by coherence technique
[AIAA PAPER 81-2054] A81-48653

The effect of flight and the presence of an airframe on engine exhaust noise
[AIAA PAPER 81-2029] A81-49727

Noise suppression characteristics of peripherally segmented duct liners
[NASA-TP-1904] N81-33946

ENGINE PARTS

Graphite/polyimide augmentor and nozzle components --- of advanced military gas turbine engines
[AIAA PAPER 81-1358] A81-49976

A prescriptive model for resource allocation at the intermediate level engine facility
[AD-A103785] N81-33135

ENGINE TESTS

The effect of vane-frame design on rotor-stator interaction noise
[AIAA PAPER 81-2034] A81-48627

ENVIRONMENT EFFECTS

Unrepresentative temperatures at a first-order meteorological station Washington National Airport
A81-48847

Responses to comments of Air Transport Association of America on aircraft towing feasibility study
[DE81-029834] N81-33201

ERROR ANALYSIS

The role of the earth's shape in navigation - An example
A81-48120

Choice of optimal parameters of a gyrovertical on the basis of a standard program
A81-48744

Characteristics of a digital filter for a precision DME system in microwave landing systems
[FUB-43-1980] N81-32136

ESCAPE SYSTEMS

Procedural handbook for escape system/accident investigation helmet usage aspects, including failure analysis
[AD-A102803] N81-32130

EULER EQUATIONS OF MOTION

Analysis and design of supersonic aircraft based on inviscid nonlinear Eulerian equations. Part 1: Rotational Euler solutions with explicit shock fitting
[AD-A103434] N81-33192

EUROPEAN AIRBUS

Development of the carbon fiber-reinforced side rudder for the Airbus
[DGLR PAPER 81-055] A81-47551

Active gust- and maneuver load control concepts, taking into account, as example, the Airbus A300. I - Design of a controller in the temporal domain for the alleviation of gust loads and the control of the effectiveness for stochastic gusts
[DGLR PAPER 81-065A] A81-47552

Active gust- and maneuver load reduction concepts, taking into account, as an example, the Airbus A300. II - Design of a controller for gust and maneuver load reduction in the frequency range
[DGLR PAPER 81-065B] A81-47553

Design and construction of a model which is dynamically similar to the A310 wing
[DGLR PAPER 81-035] A81-47556

The half-model technique in the wind tunnel and its employment in the development of the Airbus family
[DGLR PAPER 81-118] A81-47587

Application of reduced natural longitudinal stability in the Airbus program
[DGLR PAPER 81-062] A81-47609

EVACUATING (TRANSPORTATION)

Emergency cabin lighting installations: An analysis of ceiling- versus lower cabin-mounted lighting during evacuation trials --- visibility
[AD-A103191] N81-33175

EVALUATION

Design and evaluation of an integrated Quiet, Clean General Aviation Turbofan (QCGAT) engine and aircraft propulsion system
[NASA-CR-165185] N81-32147

EXHAUST FLOW SIMULATION

The effect of flight and the presence of an airframe on engine exhaust noise
[AIAA PAPER 81-2029] A81-49727

EXHAUST NOZZLES

Prediction of jet exhaust noise on airframe surfaces during flight
[AIAA PAPER 81-2035] A81-48626

Mixer nozzle aeroacoustic characteristics for the energy efficient engine
[AIAA PAPER 81-1994] A81-48639

Propulsive lateral control nozzle
[NASA-CASE-LAR-12136-1] N81-33210

EXPERIMENTAL DESIGN

European transonic wind tunnel ETW - Status of the project at the end of the predesign phase
[DGLR PAPER 81-027] A81-47563

EXTERNAL STORE SEPARATION

A new approach to weapon separation aerodynamics
[AIAA PAPER 81-1654] A81-48416

EXTRAVEHICULAR ACTIVITY

Annual survey of spaceflight safety systems: 11th supplement. Survey period - July 1980-June 1981
[IAF PAPER 81-251] A81-47425

F

F-4 AIRCRAFT

Development of an aircraft maneuver load spectrum based on VGH data
[AD-A102750] N81-32142

F-16 AIRCRAFT

More fight for the Fighting Falcon
A81-49075

F-100 AIRCRAFT

F-100s set to become target drones
A81-48067

FABRICS
Fabric installation to minimize reflection crack on taxiways at Thule Airbase, Greenland
[AD-A103737] N81-33214
Anti-symmetric elastic properties of composite plates of satin weave cloth
[NAL-TR-649T] N81-33238
FAIL-SAFE SYSTEMS
Fly-by-wire Jaguar
A81-48064
Availability requirements of the future ATC system
A81-48558
FAILURE ANALYSIS
A practical probabilistic method for evaluating the fail-safeness of structures that may fail due to fatigue
A81-47888
Procedural handbook for escape system/accident investigation helmet usage aspects, including failure analysis
[AD-A102803] N81-32130
FAR FIELDS
Flight effects on supersonic convergent-divergent nozzle jet noise
[AIAA PAPER 81-2027] A81-49728
FASTENERS
High peak energy shaped-pulse electromagnetic crack detection
A81-47785
FATIGUE (MATERIALS)
Manual on the fatigue of structures. 2: Causes and prevention of damage. 7: Mechanical surface damage --- aircraft structures
[AGARD-MAN-10(ENG)] N81-33503
FATIGUE LIFE
Damping applications in aero-propulsion systems
A81-47999
FAULT TOLERANCE
Availability requirements of the future ATC system
A81-48558
FEASIBILITY ANALYSIS
Responses to comments of Air Transport Association of America on aircraft towing feasibility study
[DE81-029834] N81-33201
FEEDBACK CONTROL
Model following control of gas turbine engines
A81-49900
FIBER REINFORCED COMPOSITES
Test methods and design allowables for fibrous composites; Proceedings of the Symposium, Dearborn, MI, October 2, 3, 1979
A81-47801
Development of advanced interceptor substructural material
[AD-A103836] N81-33241
FIGHTER AIRCRAFT
Optimization of simulation models for avionics software verification
A81-48373
Determination of thrust and throttle-dependent drag for fighter aircraft
[AIAA PAPER 81-1692] A81-48417
Combat cockpit design
A81-49173
Views on V/STOL tactical fighter aircraft: Technology needs and relationships to the runway denial problems
N81-33142
Stability and control characteristics of a three-surface advanced fighter configuration at angles of attack up to 45 deg --- conducted in the Langley 16-foot transonic tunnel
[NASA-TM-83171] N81-33159
Development of advanced interceptor substructural material
[AD-A103836] N81-33241
FINITE ELEMENT METHOD
Calculation of natural vibrations for thin-walled irregular reinforced shells of the helicopter fuselage type using the finite-element work method
A81-48097
Finite strip analysis of singly curved skin-stringer structures
A81-48390
Structural synthesis - Its genesis and development
A81-49076
An iterative finite element-integral technique for predicting sound radiation from turbofan inlets
[AIAA PAPER 81-1981] A81-49736
FLAPS (CONTROL SURFACES)
Investigation of unsteady airloads on wings with oscillating control for active control purposes
[AGARD-R-699] N81-33161
FLEXIBLE BODIES
Influence of landing gear flexibility on aircraft performance during ground roll
A81-49375
FLIGHT ALTITUDE
Prediction of range and endurance of jet aircraft at constant altitude
A81-47725
FLIGHT CHARACTERISTICS
Captive aircraft testing at high angles of attack
[AD-A103108] N81-32140
Design of optimal inputs for the identification of characteristics of aircraft flights --- parameter identification control theory
N81-33131
The impact of helicopter flight mechanics on mission performance
N81-33148
FLIGHT CONTROL
Onboard procedure for the measurement of wind shear gradients
[DGLR PAPER 81-060] A81-47612
A fail-operational duplex sensor concept for flight control systems on the basis of analytical redundancy
[DGLR PAPER 81-066] A81-47616
Ten years activity in the area of flight control for helicopters at night and in bad weather
[DGLR PAPER 81-064] A81-47620
The control anticipation parameter for augmented aircraft
[AD-A102626] N81-32152
Investigation of unsteady airloads on wings with oscillating control for active control purposes
[AGARD-R-699] N81-33161
An experimental investigation of VTOL flying qualities requirements or shipboard landings
[AD-A104137] N81-33199
FLIGHT HAZARDS
Annual survey of spaceflight safety systems: 11th supplement. Survey period - July 1980-June 1981
[IAF PAPER 81-251] A81-47425
FLIGHT MECHANICS
Estimation of kinetic quantities of flight mechanics with a nonlinear observer
[DGLR PAPER 81-067] A81-47562
The impact of helicopter flight mechanics on mission performance
N81-33148
FLIGHT OPTIMIZATION
Choice of the optimal angular velocity of the twist of a flight vehicle
A81-49946
FLIGHT PATHS
A novel airborne technique for free-field measurements of aircraft noise above the flight path with application to noise-shielding studies
[AIAA PAPER 81-2028] A81-48647
FLIGHT PLANS
Operation free flight: An operational evaluation of direct route flight plan filing in today's National Aerospace System
[AD-A104150] N81-33184
FLIGHT SAFETY
Annual survey of spaceflight safety systems: 11th supplement. Survey period - July 1980-June 1981
[IAF PAPER 81-251] A81-47425
Availability requirements of the future ATC system
A81-48558
Takeoff and missed approach under the influence of wind shear --- flight safety considerations
[TUBS/SFB-58-80-05-01] N81-32131
FLIGHT SIMULATION
The influence of the airspeed on jet turbulence and the consequences for the jet noise
[DGLR PAPER 81-021] A81-47595
The evolution of real-time digital simulation of aircraft for training applications
A81-48358
Time delays in flight simulator visual displays
A81-48369
Optimization of simulation models for avionics software verification
A81-48373

Acoustic and turbulence measurements of a tone-excited jet with and without flight simulation
[AIAA PAPER 81-2007] A81-48640
Noise radiated from inverted velocity profile jets under simulated flight
[AIAA PAPER 81-2026] A81-49729
Simulator evaluation of the effects of reduced spoiler and thrust authority on a decoupled longitudinal control system during landings in wind shear
[NASA-TM-83188] N81-33211

FLIGHT SIMULATORS
Employment of development simulation for the realization of direct side force control in the case of an attack aircraft
[DGLR PAPER 81-063] A81-47580
Probe protection in camera/model visual systems --- for helicopter flight simulators
A81-48359
The role of the research simulator in the systems development of rotorcraft
N81-33146

FLIGHT TESTS
Instrumentation for measurement of flow properties on a swept wing in flight
[DGLR PAPER 81-034] A81-47585
Flight test of the 747-JT9D for airframe and jet-flap interaction noise
[AIAA PAPER 81-2037] A81-48629
The effect of flight and the presence of an airframe on engine exhaust noise
[AIAA PAPER 81-2029] A81-49727
Recent progress in V/STOL aircraft technology
N81-33144
A flight test evaluation of the Ball-Bartoe jetwing propulsive lift concept
[AD-A103579] N81-33195
Flight test of a pure-tone acoustic source --- aircraft noise
[NASA-TP-1898] N81-33945

FLIGHT TIME
Prediction of range and endurance of jet aircraft at constant altitude
A81-47725

FLIGHT VEHICLES
Choice of the optimal angular velocity of the twist of a flight vehicle
A81-49946

FLOW DISTORTION
Assessment of inflow control structure effectiveness and design system development
[AIAA PAPER 81-2048] A81-48637

FLOW DISTRIBUTION
Assessment of inflow control structure effectiveness and design system development
[AIAA PAPER 81-2048] A81-48637
Program of research in laminar flow control in the JIAFS at NASA Langley Research Center
[NASA-CR-164843] N81-32121
Evaluation of pressure and thermal data from a wind tunnel test of a large-scale, powered, STOL fighter model
[NASA-CR-166170] N81-33162

FLOW MEASUREMENT
Instrumentation for measurement of flow properties on a swept wing in flight
[DGLR PAPER 81-034] A81-47585
Measured pressure distributions and shock shapes on a simple delta wing
A81-48479

FLUID FLOW
New developments in compact plate-fin heat exchangers
A81-48062

FLUORESCENCE
Compact and highly sensitive fluorescence lidar for oceanographic measurements
A81-49378

FLUTTER
Damping applications in aero-propulsion systems
A81-47999
Investigation of unsteady airloads on wings with oscillating control for active control purposes
[AGARD-R-699] N81-33161

FLUTTER ANALYSIS
Design and construction of a model which is dynamically similar to the A310 wing
[DGLR PAPER 81-035] A81-47556
Stability and flutter analysis of turbine blades at low speed
A81-47959
On the numerical analysis of stall flutter in turbine cascade
A81-47963
Stability analysis of the twin mode model of coupled flexion-torsion vibrations in aeroengine fans
A81-47966

FLY BY WIRE CONTROL
Fly-by-wire Jaguar
A81-48064
Advanced composite aircraft electromagnetic design and synthesis
[SAND-81-1278C] N81-33200

FORCED VIBRATION
Transient vibrations of elastic panels due to the impact of shock waves
A81-48385

FRACTURE MECHANICS
Test methods and design allowables for fibrous composites; Proceedings of the Symposium, Dearborn, MI, October 2, 3, 1979
A81-47801
Developing design allowables for composite helicopter structures
A81-47811

FREE FLOW
Two-dimensional dynamic stall as simulated in a varying freestream
[NASA-CR-164829] N81-32154

FRICTION DRAG
Operational characteristics comparison /ACV and SES/
[AIAA PAPER 81-2064] A81-48401

FUEL COMBUSTION
Droplet breakup regimes and criteria for their existence
A81-48079

FUEL CONSUMPTION
Propulsion energy for tomorrow's aviation
A81-49161
Forecast of future aviation fuels: The model
[NASA-CR-165486] N81-32956
Responses to comments of Air Transport Association of America on aircraft towing feasibility study
[DE81-029834] N81-33201

FUEL TANKS
Application of reduced natural longitudinal stability in the Airbus program
[DGLR PAPER 81-062] A81-47609
Numerical simulation of hydrodynamic ram --- for aircraft fuel tanks
A81-48351

FUNCTION GENERATORS
Function generation techniques --- in real time hybrid simulations
A81-48329

FUSELAGES
Calculation of natural vibrations for thin-walled irregular reinforced shells of the helicopter fuselage type using the finite-element work method
A81-48097

G

GAS FLOW
Droplet breakup regimes and criteria for their existence
A81-48079
Unsteady swirling flows in gas turbines --- aircraft engines and aeroacoustics
[AD-A102852] N81-32150

GAS TURBINE ENGINES
Computer-aided investigation of turbomachine aerodynamics and aeroelasticity
A81-47962
On the numerical analysis of stall flutter in turbine cascade
A81-47963
Model following control of gas turbine engines
A81-49900
Graphite/polyimide augmentor and nozzle components --- of advanced military gas turbine engines
[AIAA PAPER 81-1358] A81-49976
Dual-powered Gas Turbine/Electric (GT/E) commuter rail cars: Test, evaluation and economics
[PB81-211757] N81-34109

GAS TURBINES
A process for protecting gas turbine blade cooling passages against degradation
A81-49209
Unsteady swirling flows in gas turbines --- aircraft engines and aeroacoustics
[AD-A102852] N81-32150
GENERAL AVIATION AIRCRAFT
Improving the crashworthiness of general aviation aircraft by crash injury investigations
[AD-A103316] N81-33174
GEOCENTRIC COORDINATES
The role of the earth's shape in navigation - An example
A81-48120
GEODESY
The role of the earth's shape in navigation - An example
A81-48120
GEOIDS
The role of the earth's shape in navigation - An example
A81-48120
GEOMETRICAL OPTICS
Ray-theory predictions of the sound radiated from realistic engine intakes
[AIAA PAPER 81-1982] A81-48602
GRAPHITE-EPOXY COMPOSITE MATERIALS
Developing design allowables for composite helicopter structures
A81-47811
Cost-effective mechanical property characterization
A81-47813
The Lear Fan 2100
A81-49975
GRAPHITE-POLYIMIDE COMPOSITES
Graphite/polyimide augmentor and nozzle components --- of advanced military gas turbine engines
[AIAA PAPER 81-1358] A81-49976
GROUND EFFECT (AERODYNAMICS)
Ground effects on aircraft noise for a wide-body commercial airplane
[AIAA PAPER 81-1988] A81-48638
Effect of sweep and aspect ratio on the longitudinal aerodynamics of a spanloader wing in and out of ground effect --- wind tunnel tests
[NASA-TM-80199] N81-32119
GROUND EFFECT MACHINES
Operational characteristics comparison /ACV and SES/
[AIAA PAPER 81-2064] A81-48401
GROUND SUPPORT EQUIPMENT
Simulation model to evaluate maintenance strategies for large network of fielded systems
A81-48009
GUST LOADS
Active gust- and maneuver load control concepts, taking into account, as example, the Airbus A300. I - Design of a controller in the temporal domain for the alleviation of gust loads and the control of the effectiveness for stochastic gusts
[DGLR PAPER 81-065A] A81-47552
Active gust- and maneuver load reduction concepts, taking into account, as an example, the Airbus A300. II - Design of a controller for gust and maneuver load reduction in the frequency range
[DGLR PAPER 81-065B] A81-47553
GYROSCOPIC PENDULUMS
Choice of optimal parameters of a gyrovertical on the basis of a standard program
A81-48744

H

HARRIER AIRCRAFT
Ten years of US Marine Corps Harrier operations
N81-33140
HEAD-UP DISPLAYS
Civil head-up displays - Coming up fast
A81-49973
HEAT EXCHANGERS
New developments in compact plate-fin heat exchangers
A81-48062
HEAT ISLANDS
Unrepresentative temperatures at a first-order meteorological station Washington National Airport
A81-48847

HEAT RESISTANT ALLOYS
A process for protecting gas turbine blade cooling passages against degradation
A81-49209
HEAT TRANSFER
New developments in compact plate-fin heat exchangers
A81-48062
HELICAL FLOW
The role of the helical jet mode in aerodynamic noise generation
[AIAA PAPER 81-1963] A81-48607
HELICOPTER CONTROL
Ten years activity in the area of flight control for helicopters at night and in bad weather
[DGLR PAPER 81-064] A81-47620
Controls and displays for all-weather operation of helicopters
N81-33145
HELICOPTER DESIGN
Developing design allowables for composite helicopter structures
A81-47811
Incidents of problems in setting to work on the conceptual design of helicopters
N81-33138
The impact of helicopter flight mechanics on mission performance
N81-33148
Advancing blade concept helicopter mission capabilities
N81-33151
The consequences of certain operational requirements on the conceptual design of combat helicopters
N81-33153
Design for maximum effectiveness in the Navy role
N81-33154
The impact of operational requirements on the compromise of desired features in rotorcraft design
N81-33155
HELICOPTER PERFORMANCE
Probe protection in camera/model visual systems --- for helicopter flight simulators
A81-48359
Fielding of an advanced helicopter. The UH-60A Black Hawk: Initial operational experience
N81-33141
The impact of helicopter flight mechanics on mission performance
N81-33148
Advancing blade concept helicopter mission capabilities
N81-33151
Design for maximum effectiveness in the Navy role
N81-33154
The impact of operational requirements on the compromise of desired features in rotorcraft design
N81-33155
HELICOPTERS
The calculation of transonic blade tip flow at helicopter rotors
[DGLR PAPER 81-025] A81-47554
The calculation of separated flow at helicopter bodies
[DGLR PAPER 81-026] A81-47555
Calculation of natural vibrations for thin-walled irregular reinforced shells of the helicopter fuselage type using the finite-element work method
A81-48097
Tip geometry effects on the model helicopter rotor low frequency broadband noise
[AIAA PAPER 81-2003] A81-48615
Two-dimensional dynamic stall as simulated in a varying freestream
[NASA-CR-164829] N81-32154
Controls and displays for all-weather operation of helicopters
N81-33145
The impact of helicopter flight mechanics on mission performance
N81-33148
Mission potential of derivatives of the XV-15 tilt rotor research aircraft
N81-33150

Advancing blade concept helicopter mission capabilities
N81-33151
Helicopter noise analysis: Round-robin test
[AD-A103724] N81-33948

HELIPORTS
Development of a heliport classification method and an analysis of heliport real estate and airspace requirements
[AD-A102521] N81-32158

HELMETS
Procedural handbook for escape system/accident investigation helmet usage aspects, including failure analysis
[AD-A102803] N81-32130

HIGH POWER LASERS
Compact and highly sensitive fluorescence lidar for oceanographic measurements
A81-49378

HIGH RESOLUTION
Infrared airborne radar
A81-48566

HISTORIES
Wind Tunnels of NASA
[NASA-SP-440] N81-32153
Historical overview of V/STOL aircraft technology
N81-33143

HOVERING STABILITY
Design of a slot height distribution for increased hover control power on a circulation control rotor
[AD-A103535] N81-33194

HUMAN FACTORS ENGINEERING
Ames Research Center publications: A continuing bibliography, 1980
[NASA-TM-81308] N81-34138

HYBRID COMPUTERS
Function generation techniques --- in real time hybrid simulations
A81-48329

HYDRODYNAMIC RAM EFFECT
Numerical simulation of hydrodynamic ram --- for aircraft fuel tanks
A81-48351

HYDROGEN ENGINES
Hydrogen engines
A81-49949

HYDROGEN FUELS
Hydrogen engines
A81-49949

HYPERBOLIC NAVIGATION
Hyperbolic origins --- of radio position-fixing systems
A81-47842

I

IGNITION LIMITS
Droplet breakup regimes and criteria for their existence
A81-48079

IN-FLIGHT MONITORING
Instrumentation for measurement of flow properties on a swept wing in flight
[DGLR PAPER 81-034] A81-47585
Onboard procedure for the measurement of wind shear gradients
[DGLR PAPER 81-060] A81-47612

INERTIAL GUIDANCE
Function generation techniques --- in real time hybrid simulations
A81-48329

INFRARED RADAR
Infrared airborne radar
A81-48566

INLET FLOW
Turbomachinery noise studies of the AiResearch QCGAT engine with inflow control --- acoustic performance
[AIAA PAPER 81-2049] A81-48621
Some modal-frequency spectra of fan noise
[AIAA PAPER 81-1990] A81-48636
Assessment of inflow control structure effectiveness and design system development
[AIAA PAPER 81-2048] A81-48637

INSTRUMENT ERRORS
Simulation of Microwave Landing System
A81-48368

INSTRUMENT LANDING SYSTEMS
Simulator evaluation of separation of display parameters in path-following tasks
[NASA-TP-1915] N81-33203

INTAKE SYSTEMS
An iterative finite element-integral technique for predicting sound radiation from turbofan inlets
[AIAA PAPER 81-1981] A81-49736

INTERACTIVE CONTROL
COMLINK - A communications/EW analytical and modeling tool
A81-48547

INTERNAL COMBUSTION ENGINES
Hydrogen engines
A81-49949

INTERPLANETARY COMMUNICATION
Computer B (NAS-NAS) communications support
[AD-A104145] N81-33392

INVENTORY MANAGEMENT
Determination of cargo container inventories through logistics simulation --- for air shipment
A81-48380

INVISCID FLOW
Analysis and design of supersonic aircraft based on inviscid nonlinear Eulerian equations. Part 1: Rotational Euler solutions with explicit shock fitting
[AD-A103434] N81-33192

IONOSPHERIC DISTURBANCES
Errors of phase VLF-navigation systems under conditions of auroral disturbances
A81-47533

J

JAGUAR AIRCRAFT
Fly-by-wire Jaguar
A81-48064

JET AIRCRAFT
Prediction of range and endurance of jet aircraft at constant altitude
A81-47725
A flight test evaluation of the Ball-Bartoe jetwing propulsive lift concept
[AD-A103579] N81-33195

JET AIRCRAFT NOISE
The influence of the airspeed on jet turbulence and the consequences for the jet noise
[DGLR PAPER 81-021] A81-47595
Experiments on the nonlinear characteristics of noise propagation from low and moderate Reynolds number supersonic jets
[AIAA PAPER 81-2041] A81-48613
Engine noise source breakdown - Theory, simulation and results
[AIAA PAPER 81-2040] A81-48620
Prediction of jet exhaust noise on airframe surfaces during flight
[AIAA PAPER 81-2035] A81-48626
Some modal-frequency spectra of fan noise
[AIAA PAPER 81-1990] A81-48636
Ground effects on aircraft noise for a wide-body commercial airplane
[AIAA PAPER 81-1988] A81-48638
Acoustic and turbulence measurements of a tone-excited jet with and without flight simulation
[AIAA PAPER 81-2007] A81-48640
Effect of excitation on coaxial jet noise as observed by an elliptic mirror
[AIAA PAPER 81-2044] A81-48651
Flight effects on supersonic convergent-divergent nozzle jet noise
[AIAA PAPER 81-2027] A81-49728
Shielding concepts for jet noise
[AIAA PAPER 81-2020] A81-49730
Computer program to predict aircraft noise levels
[NASA-TP-1913] N81-33947

JET ENGINE FUELS
Ultrasonic dispersion of particulate high density fuels
[AD-A102771] N81-32290

JET ENGINES
Damping applications in aero-propulsion systems
A81-47999
Development of an analytical technique for the optimization of jet engine and duct acoustic liners
[NASA-CR-164872] N81-33205

JET EXHAUST
Noise shielding by a hot subsonic jet
[AIAA PAPER 81-2018] A81-49731
An improved prediction method for noise generated by conventional profile coaxial jets
[AIAA PAPER 81-1991] A81-49743

JET FLAPS
Flight test of the 747-JT9D for airframe and jet-flap interaction noise
[AIAA PAPER 81-2037] A81-48629

JET FLOW
Prediction of flyover jet noise spectra
[AIAA PAPER 81-2025] A81-48610
Noise radiated from inverted velocity profile jets under simulated flight
[AIAA PAPER 81-2026] A81-49729

K

KINETIC THEORY
Estimation of kinetic quantities of flight mechanics with a nonlinear observer
[DGLR PAPER 81-067] A81-47562

L

LAMINAR BOUNDARY LAYER
Program of research in laminar flow control in the JIAFS at NASA Langley Research Center
[NASA-CR-164843] N81-32121

LAMINAR FLOW
Program of research in laminar flow control in the JIAFS at NASA Langley Research Center
[NASA-CR-164843] N81-32121

LAMINATES
Recognizing defects in carbon-fiber-reinforced plastics
[DGLR PAPER 81-057] A81-47565
Developing design allowables for composite helicopter structures
A81-47811

LANDING GEAR
A formulation of the shimmy problem for swiveling wheels
A81-47268
Influence of landing gear flexibility on aircraft performance during ground roll
A81-49375

LANDING SIMULATION
Simulation of Microwave Landing System
A81-48368
Realization of a method of extremal targeting in a problem of aircraft landing control
A81-49943

LARGE SPACE STRUCTURES
Software survey for the avionics test bed --- for large space structures
[NASA-CR-161089] N81-32143

LATERAL CONTROL
Simulator evaluation of separation of display parameters in path-following tasks
[NASA-TP-1915] N81-33203
Propulsive lateral control nozzle
[NASA-CASE-LAR-12136-1] N81-33210

LEADING EDGE FLAPS
Wind-tunnel studies of advanced cargo aircraft concepts --- leading edge vortex flaps for drag reduction
[NASA-CR-164833] N81-32117

LEADING EDGE SWEEP
Effect of sweep and aspect ratio on the longitudinal aerodynamics of a spanloader wing in and out of ground effect --- wind tunnel tests
[NASA-TM-80199] N81-32119

LEADING EDGES
Investigations of vortex formation on wings with cropped leading edges
[DGLR PAPER 81-046] A81-47601

LIFE SCIENCES
Ames Research Center publications: A continuing bibliography, 1980
[NASA-TM-81308] N81-34138

LIFT
The use of direct lift control of an aircraft in a guided landing run
A81-49928

LIFT AUGMENTATION
Evaluation of pressure and thermal data from a wind tunnel test of a large-scale, powered, STOL fighter model
[NASA-CR-166170] N81-33162

LIFT DEVICES
Experimental and theoretical study of three interacting, closely-spaced, sharp-edged 60 deg delta wings at low speeds
[NASA-CR-3460] N81-33160

LIGHT AIRCRAFT
Laboratory study of efficient add-on treatments for interior noise control in light aircraft
[AIAA PAPER 81-1969] A81-48618
Performance prediction for light airplanes
A81-49374

LIGHTING EQUIPMENT
Emergency cabin lighting installations: An analysis of ceiling- versus lower cabin-mounted lighting during evacuation trials --- visibility
[AD-A103191] N81-33175

LININGS
Development of an analytical technique for the optimization of jet engine and duct acoustic liners
[NASA-CR-164872] N81-33205
Noise suppression characteristics of peripherally segmented duct liners
[NASA-TP-1904] N81-33946

LIQUID ATOMIZATION
Droplet breakup regimes and criteria for their existence
A81-48079

LOAD TESTS
Test methods and design allowables for fibrous composites; Proceedings of the Symposium, Dearborn, MI, October 2, 3, 1979
A81-47801
Developing design allowables for composite helicopter structures
A81-47811
Cost-effective mechanical property characterization
A81-47813

LOGISTICS MANAGEMENT
Determination of cargo container inventories through logistics simulation --- for air shipment
A81-46380
A study of the factors affecting productivity at the Naval Air Rework Facilities
[AD-A103783] N81-33134
A prescriptive model for resource allocation at the intermediate level engine facility
[AD-A103785] N81-33135
Development of maintenance metrics to forecast resource demands of weapon systems
[AD-A104089] N81-33136

LONGITUDINAL CONTROL
Simulator evaluation of the effects of reduced spoiler and thrust authority on a decoupled longitudinal control system during landings in wind shear
[NASA-TM-83188] N81-33211

LONGITUDINAL STABILITY
Application of reduced natural longitudinal stability in the Airbus program
[DGLR PAPER 81-062] A81-47609

LOW SPEED
Stability and flutter analysis of turbine blades at low speed
A81-47959

M

MAINTAINABILITY
Fielding of an advanced helicopter. The UH-60A Black Hawk: Initial operational experience
N81-33141

MAN MACHINE SYSTEMS
The control anticipation parameter for augmented aircraft
[AD-A102626] N81-32152

MANAGEMENT PLANNING
Development of maintenance metrics to forecast resource demands of weapon systems
[AD-A104089] N81-33136

MANNED SPACE FLIGHT
Annual survey of spaceflight safety systems: 11th supplement. Survey period - July 1980-June 1981
[IAF PAPER 81-251] A81-47425

MARINE PROPULSION
- Operational characteristics comparison /ACV and SES/ [AIAA PAPER 81-2064] A81-48401

MARINE TRANSPORTATION
- Published results of the program of university research. Transportation research results [PB81-210130] N81-34108

MATHEMATICAL MODELS
- Sting interference effects on the static dynamic and base pressure measurements of the standard dynamics model aircraft at Mach numbers 0.3 through 1.3 [AD-A102612] N81-32124
- Simplified off-design performance model of a day turbofan engine cycle [NASA-TM-83204] N81-33206

MATHEMATICAL PROGRAMMING
- Structural synthesis - Its genesis and development A81-49076

MAXIMUM LIKELIHOOD ESTIMATES
- System identification for controlled aircraft --- maximum likelihood estimates, parameter identification N81-33132

MEAN SQUARE VALUES
- Choice of optimal parameters of a gyrovertical on the basis of a standard program A81-48744

MEASURING INSTRUMENTS
- Instrumentation for measurement of flow properties on a swept wing in flight [DGLR PAPER 81-034] A81-47585

MECHANICAL PROPERTIES
- Cost-effective mechanical property characterization A81-47813

MEDITERRANEAN SEA
- Design for maximum effectiveness in the Navy role N81-33154

METALLIZING
- A process for protecting gas turbine blade cooling passages against degradation A81-49209

MICROCOMPUTERS
- COMLINK - A communications/EW analytical and modeling tool A81-48547

MICROWAVE LANDING SYSTEMS
- Simulation of Microwave Landing System A81-48368
- Minimum operational performance standards for Microwave Landing System (MLS) airborne receiving equipment [RTCA/DO-177] N81-32133
- Characteristics of a digital filter for a precision DME system in microwave landing systems [PUB-43-1980] N81-32136

MILITARY AIR FACILITIES
- Views on V/STOL tactical fighter aircraft: Technology needs and relationships to the runway denial problems N81-33142

MILITARY AIRCRAFT
- A new approach to weapon separation aerodynamics [AIAA PAPER 81-1654] A81-48416

MILITARY HELICOPTERS
- The Impact of Military Applications on Rotorcraft and V/STOL Aircraft Design [AGARD-CP-313] N81-33137
- Incidents of problems in setting to work on the conceptual design of helicopters N81-33138
- Applications of composite materials for the construction of military helicopters N81-33147
- Advancing blade concept helicopter mission capabilities N81-33151
- The consequences of certain operational requirements on the conceptual design of combat helicopters N81-33153
- Design for maximum effectiveness in the Navy role N81-33154
- The impact of operational requirements on the compromise of desired features in rotorcraft design N81-33155

MILITARY OPERATIONS
- More fight for the Fighting Falcon A81-49075
- The Impact of Military Applications on Rotorcraft and V/STOL Aircraft Design [AGARD-CP-313] N81-33137
- Vertical lift capabilities for the 80's and 90's N81-33139
- Ten years of US Marine Corps Harrier operations N81-33140
- Controls and displays for all-weather operation of helicopters N81-33145

MILITARY TECHNOLOGY
- Combat cockpit design A81-49173
- US military V/STOL: Who needs it? Wants it? Can afford it? N81-33156

MISSILE CONTROL
- Vortex bursting on slender delta wings in transonic flow and its influence on missile aerodynamic characteristics [DGLR PAPER 81-047] A81-47622

MIXERS
- Mixer nozzle aeroacoustic characteristics for the energy efficient engine [AIAA PAPER 81-1994] A81-48639

MODAL RESPONSE
- Damage recognition and localization by means of differential modal analysis [DGLR PAPER 81-056] A81-47603

N

NASA PROGRAMS
- Ames Research Center publications: A continuing bibliography, 1980 [NASA-TM-81308] N81-34138

NAVIGATION AIDS
- Errors of phase VLF-navigation systems under conditions of auroral disturbances A81-47533
- A fail-operational duplex sensor concept for flight control systems on the basis of analytical redundancy [DGLR PAPER 81-066] A81-47616
- Ten years activity in the area of flight control for helicopters at night and in bad weather [DGLR PAPER 81-064] A81-47620

NAVY
- A study of the factors affecting productivity at the Naval Air Rework Facilities [AD-A103783] N81-33134

NEAR FIELDS
- An acoustic source modelling technique to predict the near sound field of axisymmetric turbulent jets [AIAA PAPER 81-2022] A81-48606

NIGHT FLIGHTS (AIRCRAFT)
- Ten years activity in the area of flight control for helicopters at night and in bad weather [DGLR PAPER 81-064] A81-47620
- Flight evaluation of the STOL flare and landing during night operations [NASA-TM-81312] N81-32151

NOISE GENERATORS
- The role of the helical jet mode in aerodynamic noise generation [AIAA PAPER 81-1963] A81-48607
- Flight test of the 747-JT9D for airframe and jet-flap interaction noise [AIAA PAPER 81-2037] A81-48629

NOISE MEASUREMENT
- Acoustic and turbulence measurements of a tone-excited jet with and without flight simulation [AIAA PAPER 81-2007] A81-48640
- A novel airborne technique for free-field measurements of aircraft noise above the flight path with application to noise-shielding studies [AIAA PAPER 81-2028] A81-48647
- Flight effects on supersonic convergent-divergent nozzle jet noise [AIAA PAPER 81-2027] A81-49728
- Noise radiated from inverted velocity profile jets under simulated flight [AIAA PAPER 81-2026] A81-49729

Flight test of a pure-tone acoustic source --- aircraft noise
[NASA-TP-1898] N81-33945
Helicopter noise analysis: Round-robin test
[AD-A103724] N81-33948

NOISE PREDICTION (AIRCRAFT)
The influence of the airspeed on jet turbulence and the consequences for the jet noise
[DGLR PAPER 81-021] A81-47595
Trailing edge noise prediction from measured surface pressures
A81-48395
Ray-theory predictions of the sound radiated from realistic engine intakes
[AIAA PAPER 81-1982] A81-48602
An acoustic source modelling technique to predict the near sound field of axisymmetric turbulent jets
[AIAA PAPER 81-2022] A81-48606
The role of the helical jet mode in aerodynamic noise generation
[AIAA PAPER 81-1963] A81-48607
Prediction of flyover jet noise spectra
[AIAA PAPER 81-2025] A81-48610
Laboratory study of efficient add-on treatments for interior noise control in light aircraft
[AIAA PAPER 81-1969] A81-48618
Prediction of jet exhaust noise on airframe surfaces during flight
[AIAA PAPER 81-2035] A81-48626
Comparison of predicted engine core noise with current and proposed aircraft noise certification requirements
[AIAA PAPER 81-2053] A81-48635
Ground effects on aircraft noise for a wide-body commercial airplane
[AIAA PAPER 81-1988] A81-48638
Prediction method for aeroacoustic loads on under the wing blown flaps
[AIAA PAPER 81-2038] A81-48644
High bypass ratio engine noise component separation by coherence technique
[AIAA PAPER 81-2054] A81-48653
An iterative finite element-integral technique for predicting sound radiation from turbofan inlets
[AIAA PAPER 81-1981] A81-49736
An improved prediction method for noise generated by conventional profile coaxial jets
[AIAA PAPER 81-1991] A81-49743
User's manual for a computer program to calculate discrete frequency noise of conventional and advanced propellers
[NASA-TM-83135] N81-32966
Computer program to predict aircraft noise levels
[NASA-TP-1913] N81-33947

NOISE PROPAGATION
Ray-theory predictions of the sound radiated from realistic engine intakes
[AIAA PAPER 81-1982] A81-48602
Experiments on the nonlinear characteristics of noise propagation from low and moderate Reynolds number supersonic jets
[AIAA PAPER 81-2041] A81-48613
Engine noise source breakdown - Theory, simulation and results
[AIAA PAPER 81-2040] A81-48620
Flight test of a pure-tone acoustic source --- aircraft noise
[NASA-TP-1898] N81-33945

NOISE REDUCTION
Ray-theory predictions of the sound radiated from realistic engine intakes
[AIAA PAPER 81-1982] A81-48602
Procedure for evaluation of engine isolators for reduced structure-borne interior noise transmission
[AIAA PAPER 81-1970] A81-48608
Theoretical and experimental evaluation of transmission loss of cylinders
[AIAA PAPER 81-1971] A81-48612
Tip geometry effects on the model helicopter rotor low frequency broadband noise
[AIAA PAPER 81-2003] A81-48615
Laboratory study of efficient add-on treatments for interior noise control in light aircraft
[AIAA PAPER 81-1969] A81-48618
Comparison of predicted engine core noise with current and proposed aircraft noise certification requirements
[AIAA PAPER 81-2053] A81-48635
Mixer nozzle aeroacoustic characteristics for the energy efficient engine
[AIAA PAPER 81-1994] A81-48639
A novel airborne technique for free-field measurements of aircraft noise above the flight path with application to noise-shielding studies
[AIAA PAPER 81-2028] A81-48647
Shielding concepts for jet noise
[AIAA PAPER 81-2020] A81-49730
Noise shielding by a hot subsonic jet
[AIAA PAPER 81-2018] A81-49731
Design and evaluation of an integrated Quiet, Clean General Aviation Turbofan (QCGAT) engine and aircraft propulsion system
[NASA-CR-165185] N81-32147
Development of an analytical technique for the optimization of jet engine and duct acoustic liners
[NASA-CR-164872] N81-33205
Noise suppression characteristics of peripherally segmented duct liners
[NASA-TP-1904] N81-33946

NOISE SPECTRA
Trailing edge noise prediction from measured surface pressures
A81-48395
Prediction of flyover jet noise spectra
[AIAA PAPER 81-2025] A81-48610
Contributions to the theory of side edge flap noise
[AIAA PAPER 81-2036] A81-48625
Some modal-frequency spectra of fan noise
[AIAA PAPER 81-1990] A81-48636
Ground effects on aircraft noise for a wide-body commercial airplane
[AIAA PAPER 81-1988] A81-48638
Effect of excitation on coaxial jet noise as observed by an elliptic mirror
[AIAA PAPER 81-2044] A81-48651

NONDESTRUCTIVE TESTS
Recognizing defects in carbon-fiber-reinforced plastics
[DGLR PAPER 81-057] A81-47565
High peak energy shaped-pulse electromagnetic crack detection
A81-47785

NONLINEAR SYSTEMS
A technique for the implementation of nonlinear models as real-time digital simulations --- with application to aircraft turbine engine design
A81-48333

NONUNIFORM FLOW
Damping of turbomachine blade variations by subsonic flow
A81-47957

NOZZLE DESIGN
Graphite/polyimide augmentor and nozzle components --- of advanced military gas turbine engines
[AIAA PAPER 81-1358] A81-49976

NOZZLE FLOW
Comparison of computational and experimental jet effects
[AIAA PAPER 81-1492] A81-49979

NOZZLE GEOMETRY
Effect of excitation on coaxial jet noise as observed by an elliptic mirror
[AIAA PAPER 81-2044] A81-48651

NUCLEAR WEAPONS
Safety study: Prime Nuclear Airlift Force (PNAF) missions involving the use of C-130 and C-141 aircraft
[AD-A103282] N81-33173

NUMERICAL ANALYSIS
On the numerical analysis of stall flutter in turbine cascade
A81-47963
Development of an analytical technique for the optimization of jet engine and duct acoustic liners
[NASA-CR-164872] N81-33205

NUMERICAL CONTROL
Development considerations for real-time aircraft/avionic distributed computer control systems
A81-48376

Reliability validation of systems for life-critical applications
A81-48559

NUMERICAL FLOW VISUALIZATION
Numerical simulation of hydrodynamic ram --- for aircraft fuel tanks
A81-48351

O

OBSERVABILITY (SYSTEMS)
Estimation of kinetic quantities of flight mechanics with a nonlinear observer
[DGLR PAPER 81-067] A81-47562

OCEANOGRAPHY
Compact and highly sensitive fluorescence lidar for oceanographic measurements
A81-49378

ONBOARD DATA PROCESSING
Characteristics of a digital filter for a precision DME system in microwave landing systems
[FUB-43-1980] N81-32136

ONBOARD EQUIPMENT
Onboard procedure for the measurement of wind shear gradients
[DGLR PAPER 81-060] A81-47612

OPERATING COSTS
Application of advanced technologies to derivatives of current small transport aircraft
[NASA-CR-166197] N81-33190

OPTICAL MEASURING INSTRUMENTS
Probe protection in camera/model visual systems --- for helicopter flight simulators
A81-48359

OPTICAL RADAR
Compact and highly sensitive fluorescence lidar for oceanographic measurements
A81-49378

OPTIMAL CONTROL
Application of optimal control and estimation to autopilot and autothrottle systems
A81-48371
Model following control of gas turbine engines
A81-49900
Realization of a method of extremal targeting in a problem of aircraft landing control
A81-49943

OPTIMIZATION
Choice of optimal parameters of a gyrovertical on the basis of a standard program
A81-48744
Development of an analytical technique for the optimization of jet engine and duct acoustic liners
[NASA-CR-164872] N81-33205

OSCILLATING FLOW
Numerical experiments on unsteady flows through vibrating cascades
A81-47961

P

PANELS
Transient vibrations of elastic panels due to the impact of shock waves
A81-48385

PARALLEL PROCESSING (COMPUTERS)
The array processor - A real-time simulator
A81-48328

PARAMETER IDENTIFICATION
Design of optimal inputs for the identification of characteristics of aircraft flights --- parameter identification control theory
N81-33131
System identification for controlled aircraft --- maximum likelihood estimates, parameter identification
N81-33132

PARAMETERIZATION
Parametric synthesis of an automatic system for flight-vehicle stabilization
A81-49940

PARTICLE SIZE DISTRIBUTION
Ultrasonic dispersion of particulate high density fuels
[AD-A102771] N81-32290

PASSENGER AIRCRAFT
Commercial airliners - Design and flight operation
A81-49575

PATTERN METHOD (FORECASTING)
Computer graphics applications
[PB81-215246] N81-33188

PATTERN RECOGNITION
Aircraft recognition by means of monostatic radar
A81-47142
An original method for the analysis of the power diffraction pattern of a radar target for shape recognition purposes
A81-47143

PAVEMENTS
Lime-stabilized native soil as base course for light aircraft pavement
[AD-A102196] N81-32156

PERFORMANCE PREDICTION
Prediction of range and endurance of jet aircraft at constant altitude
A81-47725
Operational characteristics comparison /ACV and SES/
[AIAA PAPER 81-2064] A81-48401
Performance prediction for light airplanes
A81-49374
Statistics of some atmospheric turbulence records relevant to aircraft response calculations
[NASA-CR-3464] N81-33191

PERFORMANCE TESTS
Investigation of performance, noise and detectability characteristics of small-scale remotely piloted vehicle /RPV/ propellers
[AIAA PAPER 81-2005] A81-49732
Minimum operational performance standards for Microwave Landing System (MLS) airborne receiving equipment
[RTCA/DO-177] N81-32133

PHASED ARRAYS
Advanced microstrip antenna development. Volume 1: Technology studies for aircraft phased arrays
[AD-A103837] N81-33390
Tent shaped phased array
[AD-A103927] N81-33393

PILOT TRAINING
The evolution of real-time digital simulation of aircraft for training applications
A81-48358
Data acquisition and analysis system as a training device for simulated conventional weapon delivery
[NLR-MP-80027-U] N81-32164

PIPELINING (COMPUTERS)
The array processor - A real-time simulator
A81-48328

PITOT TUBES
Development of an instrument for the accurate measurement of aircraft airspeed and altitude
[AD-A103421] N81-33204

PLANNING
US military V/STOL: Who needs it? Wants it? Can afford it?
N81-33156

PLUMES
Comparison of computational and experimental jet effects
[AIAA PAPER 81-1492] A81-49979

POLYMER CHEMISTRY
Water-compatible polymer concrete materials for use in rapid repair systems for airport runways
[AD-A102873] N81-32273

POLYMER MATRIX COMPOSITE MATERIALS
Test methods and design allowables for fibrous composites; Proceedings of the Symposium, Dearborn, MI, October 2, 3, 1979
A81-47801

POSITION (LOCATION)
Hyperbolic origins --- of radio position-fixing systems
A81-47842
An analytical solution of the two star sight problem of celestial navigation
A81-48121

POSITION ERRORS
Errors of phase VLF-navigation systems under conditions of auroral disturbances
A81-47533

POWERED LIFT AIRCRAFT
Evaluation of pressure and thermal data from a wind tunnel test of a large-scale, powered, STOL fighter model
[NASA-CR-166170] N81-33162

A flight test evaluation of the Ball-Bartoe jetwing propulsive lift concept
[AD-A103579] N81-33195

PRECISION
Characteristics of a digital filter for a precision DME system in microwave landing systems
[FUB-43-1980] N81-32136

PREDICTION ANALYSIS TECHNIQUES
Prediction method for aeroacoustic loads on under the wing blown flaps
[AIAA PAPER 81-2038] A81-48644

PRESSURE DISTRIBUTION
Measured pressure distributions and shock shapes on a simple delta wing
A81-48479

PRESSURE MEASUREMENTS
Onboard procedure for the measurement of wind shear gradients
[DGLR PAPER 81-060] A81-47612
Trailing edge noise prediction from measured surface pressures
A81-48395
Development of an instrument for the accurate measurement of aircraft airspeed and altitude
[AD-A103421] N81-33204

PRESSURE OSCILLATIONS
Contributions to the theory of side edge flap noise
[AIAA PAPER 81-2036] A81-48625

PROBABILITY THEORY
A practical probabilistic method for evaluating the fail-safeness of structures that may fail due to fatigue
A81-47888
Computer graphics applications
[PB81-215246] N81-33188

PRODUCTION ENGINEERING
Design of production processes for flight-vehicle engines --- Russian book
A81-49475

PRODUCTIVITY
A study of the factors affecting productivity at the Naval Air Rework Facilities
[AD-A103763] N81-33134

PROGRAM VERIFICATION (COMPUTERS)
Optimization of simulation models for avionics software verification
A81-48373

PROJECT MANAGEMENT
European transonic wind tunnel ETW - Status of the project at the end of the predesign phase
[DGLR PAPER 81-027] A81-47563

PROPELLER BLADES
Investigation of performance, noise and detectability characteristics of small-scale remotely piloted vehicle /RPV/ propellers
[AIAA PAPER 81-2005] A81-49732
Design of a slot height distribution for increased hover control power on a circulation control rotor
[AD-A103535] N81-33194

PROPELLERS
Comparative acoustic wind-tunnel measurements and theoretical correlations on subsonic aircraft propellers at full-scale and model-scale
[AIAA PAPER 81-2004] A81-48634
User's manual for a computer program to calculate discrete frequency noise of conventional and advanced propellers
[NASA-TM-83135] N81-32966

PROPULSION SYSTEM PERFORMANCE
Simplified off-design performance model of a day turbofan engine cycle
[NASA-TM-83204] N81-33206

PROPULSIVE EFFICIENCY
Operational characteristics comparison /ACV and SES/
[AIAA PAPER 81-2064] A81-48401
Propulsion energy for tomorrow's aviation
A81-49161

PROTECTIVE COATINGS
A process for protecting gas turbine blade cooling passages against degradation
A81-49209

Q

QUALITY CONTROL
Damage recognition and localization by means of differential modal analysis
[DGLR PAPER 81-056] A81-47603

QUIET ENGINE PROGRAM
Turbomachinery noise studies of the AiResearch QCGAT engine with inflow control --- acoustic performance
[AIAA PAPER 81-2049] A81-48621
Design and evaluation of an integrated Quiet, Clean General Aviation Turbofan (QCGAT) engine and aircraft propulsion system
[NASA-CR-165185] N81-32147

R

RADAR CROSS SECTIONS
An original method for the analysis of the power diffraction pattern of a radar target for shape recognition purposes
A81-47143

RADAR MEASUREMENT
Adaptive features and measurement requirements for advanced surveillance radars
A81-48544

RADAR NAVIGATION
A simple radar for navigation accuracy measurements
A81-47844

RADAR TARGETS
An original method for the analysis of the power diffraction pattern of a radar target for shape recognition purposes
A81-47143
Adaptive features and measurement requirements for advanced surveillance radars
A81-48544

RADAR TRACKING
Aircraft recognition by means of monostatic radar
A81-47142

RADIO DIRECTION FINDERS
Hyperbolic origins --- of radio position-fixing systems
A81-47842

RADIO NAVIGATION
Errors of phase VLF-navigation systems under conditions of auroral disturbances
A81-47533

RAIL TRANSPORTATION
Published results of the program of university research. Transportation research results
[PB81-210130] N81-34108
Dual-powered Gas Turbine/Electric (GT/E) computer commuter rail cars: Test, evaluation and economics
[PB81-211757] N81-34109

RANDOM LOADS
Active gust- and maneuver load control concepts, taking into account, as example, the Airbus A300. I - Design of a controller in the temporal domain for the alleviation of gust loads and the control of the effectiveness for stochastic gusts
[DGLR PAPER 81-065A] A81-47552

RANGE (EXTREMES)
Prediction of range and endurance of jet aircraft at constant altitude
A81-47725

REAL TIME OPERATION
The array processor - A real-time simulator
A81-48328
Function generation techniques --- in real time hybrid simulations
A81-48329
A technique for the implementation of nonlinear models as real-time digital simulations --- with application to aircraft turbine engine design
A81-48333
Development considerations for real-time aircraft/avionic distributed computer control systems
A81-48376

RECONNAISSANCE AIRCRAFT
Twin-rotor patrol airship flying model design rationale
[AD-A102575] N81-32141

REDUNDANCY
A fail-operational duplex sensor concept for flight control systems on the basis of analytical redundancy
[DGLR PAPER 81-066] A81-47616

REFRIGERATING MACHINERY
Analysis of the operation of air turborefrigeration plants and their use for on-the-ground air-conditioning of aircraft
A81-48196

REGENERATORS
New developments in compact plate-fin heat exchangers
A81-48062

REGIONAL PLANNING
Computer graphics applications
[PB81-215246] N81-33188

REINFORCED SHELLS
Calculation of natural vibrations for thin-walled irregular reinforced shells of the helicopter fuselage type using the finite-element work method
A81-48097

RELIABILITY ENGINEERING
Measures for increasing the service life of riveted, aircraft-relevant joints
[DGLR PAPER 81-052] A81-47564
Reliability validation of systems for life-critical applications
A81-48559

REMOTE SENSING
Compact and highly sensitive fluorescence lidar for oceanographic measurements
A81-49378

REMOTELY PILOTED VEHICLES
Investigation of performance, noise and detectability characteristics of small-scale remotely piloted vehicle /RPV/ propellers
[AIAA PAPER 81-2005] A81-49732

RESEARCH AND DEVELOPMENT
The role of the research simulator in the systems development of rotorcraft
N81-33146

RESERVES
The relation between aircraft fuel reserves and navigation
A81-47843

RESONANT FREQUENCIES
Damage recognition and localization by means of differential modal analysis
[DGLR PAPER 81-056] A81-47603

RESONANT VIBRATION
Calculation of natural vibrations for thin-walled irregular reinforced shells of the helicopter fuselage type using the finite-element work method
A81-48097
Finite strip analysis of singly curved skin-stringer structures
A81-48390

RESOURCES MANAGEMENT
A prescriptive model for resource allocation at the intermediate level engine facility
[AD-A103785] N81-33135

REYNOLDS NUMBER
Experiments on the nonlinear characteristics of noise propagation from low and moderate Reynolds number supersonic jets
[AIAA PAPER 81-2041] A81-48613

RIVETED JOINTS
Measures for increasing the service life of riveted, aircraft-relevant joints
[DGLR PAPER 81-052] A81-47564

ROCKET ENGINES
Design of production processes for flight-vehicle engines --- Russian book
A81-49475

RODS
Geometrically nonlinear theory for calculating thin rods of a wing profile
A81-49935
Strength calculation of thin-wall rods of significant taper
A81-49937

ROTARY WING AIRCRAFT
Twin-rotor patrol airship flying model design rationale
[AD-A102575] N81-32141
The Impact of Military Applications on Rotorcraft and V/STOL Aircraft Design
[AGARD-CP-313] N81-33137

ROTARY WINGS
The calculation of transonic blade tip flow at helicopter rotors
[DGLR PAPER 81-025] A81-47554
Tip geometry effects on the model helicopter rotor low frequency broadband noise
[AIAA PAPER 81-2003] A81-48615
A full-scale wind tunnel investigation of a helicopter bearingless main rotor --- Ames 40 by 80 Wind Tunnel
[NASA-TM-81321] N81-32137
Two-dimensional dynamic stall as simulated in a varying freestream
[NASA-CR-164829] N81-32154
Design of a slot height distribution for increased hover control power on a circulation control rotor
[AD-A103535] N81-33194

ROTOR AERODYNAMICS
The calculation of transonic blade tip flow at helicopter rotors
[DGLR PAPER 81-025] A81-47554
Stability and flutter analysis of turbine blades at low speed
A81-47959
Two-dimensional dynamic stall as simulated in a varying freestream
[NASA-CR-164829] N81-32154

ROTOR BLADES (TURBOMACHINERY)
Effects of blade-vane ratio and rotor-stator spacing on fan noise with forward velocity
[AIAA PAPER 81-2032] A81-48628

ROTOR SPEED
The effect of vane-frame design on rotor-stator interaction noise
[AIAA PAPER 81-2034] A81-48627

ROTORCRAFT AIRCRAFT
The Impact of Military Applications on Rotorcraft and V/STOL Aircraft Design
[AGARD-CP-313] N81-33137
The role of the research simulator in the systems development of rotorcraft
N81-33146

ROUTES
Operation free flight: An operational evaluation of direct route flight plan filing in today's National Aerospace System
[AD-A104150] N81-33184

RUNWAY LIGHTS
Flight evaluation of the STOL flare and landing during night operations
[NASA-TM-81312] N81-32151

RUNWAYS
Lime-stabilized native soil as base course for light aircraft pavement
[AD-A102196] N81-32156
Water-compatible polymer concrete materials for use in rapid repair systems for airport runways
[AD-A102873] N81-32273
Fabric installation to minimize reflection crack on taxiways at Thule Airbase, Greenland
[AD-A103737] N81-33214
Upgraded FAA Airfield Capacity Model. Volume 1: Supplemental user's guide
[AD-A104154] N81-33216
Upgraded FAA Airfield Capacity Model. Volume 2: Technical description of revisions
[AD-A104155] N81-33217

S

SCALE MODELS
Sting interference effects on the static dynamic and base pressure measurements of the standard dynamics model aircraft at Mach numbers 0.3 through 1.3
[AD-A102612] N81-32124

SCREENS
Calculation of the aerodynamic characteristics of a deformable wing, moving near a screen
A81-49948

SEAT BELTS
Test and evaluation of an experimental feasibility prototype passive seat mounted limb restraint system
[AD-A104161] N81-33177

SEMISPAN MODELS
Investigation of the circulation control wing/upper surface blowing high-lift system on a low aspect ratio semispan model
[AD-A103090] N81-32128

SEPARATED FLOW
The calculation of separated flow at helicopter bodies
[DGLR PAPER 81-026] A81-47555
Investigations of vortex formation on wings with cropped leading edges
[DGLR PAPER 81-046] A81-47601
SERVICE LIFE
Measures for increasing the service life of riveted, aircraft-relevant joints
[DGLR PAPER 81-052] A81-47564
SHARP LEADING EDGES
Experimental and theoretical study of three interacting, closely-spaced, sharp-edged 60 deg delta wings at low speeds
[NASA-CR-3460] N81-33160
SHIELDING
Shielding concepts for jet noise
[AIAA PAPER 81-2020] A81-49730
Noise shielding by a hot subsonic jet
[AIAA PAPER 81-2018] A81-49731
SHOCK TUBES
Droplet breakup regimes and criteria for their existence
A81-48079
SHOCK WAVE INTERACTION
Transient vibrations of elastic panels due to the impact of shock waves
A81-48385
SHOCK WAVE PROFILES
Measured pressure distributions and shock shapes on a simple delta wing
A81-48479
SHOCK WAVES
Analysis and design of supersonic aircraft based on inviscid nonlinear Eulerian equations. Part 1: Rotational Euler solutions with explicit shock fitting
[AD-A103434] N81-33192
SHORT TAKEOFF AIRCRAFT
Flight evaluation of the STOL flare and landing during night operations
[NASA-TM-81312] N81-32151
V/STOL aircraft technology in Canada
N81-33152
Evaluation of pressure and thermal data from a wind tunnel test of a large-scale, powered, STOL fighter model
[NASA-CR-166170] N81-33162
A flight test evaluation of the Ball-Bartoe jetwing propulsive lift concept
[AD-A103579] N81-33195
SIGNAL ANALYSIS
An original method for the analysis of the power diffraction pattern of a radar target for shape recognition purposes
A81-47143
SIGNAL PROCESSING
High bypass ratio engine noise component separation by coherence technique
[AIAA PAPER 81-2054] A81-48653
Design of optimal inputs for the identification of characteristics of aircraft flights --- parameter identification control theory
N81-33131
SKEWNESS
The effect of the skewness of the skin panels on stresses in conical wings
A81-49930
SKIN (STRUCTURAL MEMBER)
Finite strip analysis of singly curved skin-stringer structures
A81-48390
The effect of the skewness of the skin panels on stresses in conical wings
A81-49930
SLOTS
Design of a slot height distribution for increased hover control power on a circulation control rotor
[AD-A103535] N81-33194
SLURRY PROPELLANTS
Ultrasonic dispersion of particulate high density fuels
[AD-A102771] N81-32290
SOIL MECHANICS
Lime-stabilized native soil as base course for light aircraft pavement
[AD-A102196] N81-32156
SOLAR POWERED AIRCRAFT
Solar powered aircraft
[NASA-CASE-LAR-12615-1] N81-32138
SONIC BOOMS
Transient vibrations of elastic panels due to the impact of shock waves
A81-48385
SOUND FIELDS
An iterative finite element-integral technique for predicting sound radiation from turbofan inlets
[AIAA PAPER 81-1981] A81-49736
SOUND INTENSITY
Computer program to predict aircraft noise levels
[NASA-TP-1913] N81-33947
SOUND PRESSURE
Procedure for evaluation of engine isolators for reduced structure-borne interior noise transmission
[AIAA PAPER 81-1970] A81-48608
Prediction of jet exhaust noise on airframe surfaces during flight
[AIAA PAPER 81-2035] A81-48626
SOUND PROPAGATION
An iterative finite element-integral technique for predicting sound radiation from turbofan inlets
[AIAA PAPER 81-1981] A81-49736
SOUND RANGING
Hyperbolic origins --- of radio position-fixing systems
A81-47842
SOUND TRANSMISSION
Procedure for evaluation of engine isolators for reduced structure-borne interior noise transmission
[AIAA PAPER 81-1970] A81-48608
SOUND WAVES
Ray-theory predictions of the sound radiated from realistic engine intakes
[AIAA PAPER 81-1982] A81-48602
SPACECRAFT COMMUNICATION
Tent shaped phased array
[AD-A103927] N81-33393
SPACECREWS
Annual survey of spaceflight safety systems: 11th supplement. Survey period - July 1980-June 1981
[IAF PAPER 81-251] A81-47425
SPANLOADER AIRCRAFT
Effect of sweep and aspect ratio on the longitudinal aerodynamics of a spanloader wing in and out of ground effect --- wind tunnel tests
[NASA-TM-80199] N81-32119
SPANWISE BLOWING
Evaluation of pressure and thermal data from a wind tunnel test of a large-scale, powered, STOL fighter model
[NASA-CR-166170] N81-33162
SPEED INDICATORS
Development of an instrument for the accurate measurement of aircraft airspeed and altitude
[AD-A103421] N81-33204
SPHERICAL COORDINATES
An analytical solution of the two star sight problem of celestial navigation
A81-48121
SPOILERS
Simulator evaluation of the effects of reduced spoiler and thrust authority on a decoupled longitudinal control system during landings in wind shear
[NASA-TM-83188] N81-33211
STABILITY DERIVATIVES
Sting interference effects on the static dynamic and base pressure measurements of the standard dynamics model aircraft at Mach numbers 0.3 through 1.3
[AD-A102612] N81-32124
STANDARDIZATION
Helicopter noise analysis: Round-robin test
[AD-A103724] N81-33948
STANDARDS
Minimum operational performance standards for Microwave Landing System (MLS) airborne receiving equipment
[RTCA/DO-177] N81-32133
STAR TRACKERS
An analytical solution of the two star sight problem of celestial navigation
A81-48121

STATIC PRESSURE
Development of an instrument for the accurate measurement of aircraft airspeed and altitude
[AD-A103421] N81-33204
STATIC TESTS
Assessment of inflow control structure effectiveness and design system development
[AIAA PAPER 81-2048] A81-48637
STOCHASTIC PROCESSES
Computer graphics applications
[PB81-215246] N81-33188
STRESS ANALYSIS
Stress concentration in elements of aircraft structures --- Russian book
A81-49471
STRESS CONCENTRATION
Investigations of vortex formation on wings with cropped leading edges
[DGLR PAPER 81-046] A81-47601
Stress concentration in elements of aircraft structures --- Russian book
A81-49471
The effect of the skewness of the skin panels on stresses in conical wings
A81-49930
STRESS-STRAIN RELATIONSHIPS
Geometrically nonlinear theory for calculating thin rods of a wing profile
A81-49935
STRINGERS
Finite strip analysis of singly curved skin-stringer structures
A81-48390
STRIP TRANSMISSION LINES
Advanced microstrip antenna development. Volume 1: Technology studies for aircraft phased arrays
[AD-A103837] N81-33390
STRUCTURAL ANALYSIS
Geometrically nonlinear theory for calculating thin rods of a wing profile
A81-49935
Strength calculation of thin-wall rods of significant taper
A81-49937
Development of an aircraft maneuver load spectrum based on VGH data
[AD-A102750] N81-32142
STRUCTURAL DESIGN
New developments in compact plate-fin heat exchangers
A81-48062
Structural synthesis - Its genesis and development
A81-49076
The Lear Fan 2100
A81-49975
STRUCTURAL DESIGN CRITERIA
Test methods and design allowables for fibrous composites; Proceedings of the Symposium, Dearborn, MI, October 2, 3, 1979
A81-47801
STRUCTURAL FAILURE
A practical probabilistic method for evaluating the fail-safeness of structures that may fail due to fatigue
A81-47888
STRUCTURAL RELIABILITY
A practical probabilistic method for evaluating the fail-safeness of structures that may fail due to fatigue
A81-47888
STRUCTURAL VIBRATION
A formulation of the shimmy problem for swiveling wheels
A81-47268
Damping applications for vibration control; Proceedings of the Winter Annual Meeting, Chicago, IL, November 16-21, 1980
A81-47993
STRUTS
A formulation of the shimmy problem for swiveling wheels
A81-47268
SUBSONIC AIRCRAFT
Comparative acoustic wind-tunnel measurements and theoretical correlations on subsonic aircraft propellers at full-scale and model-scale
[AIAA PAPER 81-2004] A81-48634
SUBSONIC FLOW
Damping of turbomachine blade variations by subsonic flow
A81-47957
Evaluation of two-dimensional subsonic oscillatory airforce coefficients and loading distributions
A81-48480
Noise shielding by a hot subsonic jet
[AIAA PAPER 81-2018] A81-49731
Calculation of the aerodynamic characteristics of a deformable wing, moving near a screen
A81-49948
SUBSONIC SPEED
Contribution to the determination of the drag coefficient for air breathing flight vehicles on the basis of wind tunnel measurements
[DGLR PAPER 81-036] A81-47604
SUCTION
Program of research in laminar flow control in the JIAFS at NASA Langley Research Center
[NASA-CR-164843] N81-32121
SUPERCRITICAL WINGS
Design and construction of a model which is dynamically similar to the A310 wing
[DGLR PAPER 81-035] A81-47556
Investigation of the circulation control wing/upper surface blowing high-lift system on a low aspect ratio semispan model
[AD-A103090] N81-32128
SUPERSONIC AIRCRAFT
Multi-mission STOVL with vectored thrust engines
N81-33149
Wind tunnel testing of a windshield material or supersonic aircraft
[AD-A103383] N81-33163
Analysis and design of supersonic aircraft based on inviscid nonlinear Eulerian equations. Part 1: Rotational Euler solutions with explicit shock fitting
[AD-A103434] N81-33192
SUPERSONIC DIFFUSERS
Analysis of the performance of the drive system and diffuser of the Langley unitary plan wind tunnel
[NASA-TM-83168] N81-33158
SUPERSONIC FLIGHT
Contribution to the determination of the drag coefficient for air breathing flight vehicles on the basis of wind tunnel measurements
[DGLR PAPER 81-036] A81-47604
Flight effects on supersonic convergent-divergent nozzle jet noise
[AIAA PAPER 81-2027] A81-49728
SUPERSONIC FLOW
Measured pressure distributions and shock shapes on a simple delta wing
A81-48479
SUPERSONIC JET FLOW
Experiments on the nonlinear characteristics of noise propagation from low and moderate Reynolds number supersonic jets
[AIAA PAPER 81-2041] A81-48613
SUPERSONIC NOZZLES
Flight effects on supersonic convergent-divergent nozzle jet noise
[AIAA PAPER 81-2027] A81-49728
SUPERSONIC WIND TUNNELS
Analysis of the performance of the drive system and diffuser of the Langley unitary plan wind tunnel
[NASA-TM-83168] N81-33158
SUPPORTS
Sting interference effects on the static dynamic and base pressure measurements of the standard dynamics model aircraft at Mach numbers 0.3 through 1.3
[AD-A102612] N81-32124
SURFACE EFFECT SHIPS
Operational characteristics comparison /ACV and SES/
[AIAA PAPER 81-2064] A81-48401
SURFACE FINISHING
Manual on the fatigue of structures. 2: Causes and prevention of damage. 7: Mechanical surface damage --- aircraft structures
[AGARD-MAN-10(ENG)] N81-33503
SURFACE NAVIGATION
The role of the earth's shape in navigation - An example
A81-48120

SURFACE STABILITY
- Manual on the fatigue of structures. 2: Causes and prevention of damage. 7: Mechanical surface damage --- aircraft structures [AGARD-MAN-10(ENG)] N81-33503

SURVEILLANCE RADAR
- Adaptive features and measurement requirements for advanced surveillance radars A81-48544

SWEPT WINGS
- Instrumentation for measurement of flow properties on a swept wing in flight [DGLR PAPER 81-034] A81-47585

SWIVELS
- A formulation of the shimmy problem for swiveling wheels A81-47268

SYMMETRY
- Anti-symmetric elastic properties of composite plates of satin weave cloth [NAL-TR-649T] N81-33238

SYSTEMS ANALYSIS
- Multisite testing of the Discrete Address Beacon System (DABS) [AD-A103575] N81-33181

SYSTEMS ENGINEERING
- Reliability validation of systems for life-critical applications A81-48559

SYSTEMS SIMULATION
- Simulation model to evaluate maintenance strategies for large network of fielded systems A81-48009
- Function generation techniques --- in real time hybrid simulations A81-48329
- COMLINK - A communications/EW analytical and modeling tool A81-48547
- Engine noise source breakdown - Theory, simulation and results [AIAA PAPER 81-2040] A81-48620

T

T-37 AIRCRAFT
- Engine requirements for the T-37 trainer aircraft - A simulation study and analysis A81-48379

T-38 AIRCRAFT
- Alternate T-38 transparency development. Part 1: Initial analysis and design [AD-A103261] N81-33196
- Alternate T-38 transparency development. Part 2: Baseline birdstrike testing [AD-A103262] N81-33197

TABLES (DATA)
- Effect of sweep and aspect ratio on the longitudinal aerodynamics of a spanloader wing in and out of ground effect --- wind tunnel tests [NASA-TM-80199] N81-32119

TAKEOFF
- Takeoff and missed approach under the influence of wind shear --- flight safety considerations [TUBS/SFB-58-80-05-01] N81-32131

TARGET DRONE AIRCRAFT
- F-100s set to become target drones A81-48067

TARGET RECOGNITION
- Aircraft recognition by means of monostatic radar A81-47142

TAXIING
- Fabric installation to minimize reflection crack on taxiways at Thule Airbase, Greenland [AD-A103737] N81-33214

TECHNOLOGICAL FORECASTING
- Incidents of problems in setting to work on the conceptual design of helicopters N81-33138

TECHNOLOGIES
- Design of production processes for flight-vehicle engines --- Russian book A81-49475

TECHNOLOGY ASSESSMENT
- More fight for the Fighting Falcon A81-49075
- Vertical lift capabilities for the 80's and 90's N81-33139
- Historical overview of V/STOL aircraft technology N81-33143
- Mission potential of derivatives of the XV-15 tilt rotor research aircraft N81-33150
- Advancing blade concept helicopter mission capabilities N81-33151
- V/STOL aircraft technology in Canada N81-33152
- The impact of operational requirements on the compromise of desired features in rotorcraft design N81-33155
- US military V/STOL: Who needs it? Wants it? Can afford it? N81-33156

TECHNOLOGY UTILIZATION
- Application of advanced technologies to derivatives of current small transport aircraft [NASA-CR-166197] N81-33190

TELECOMMUNICATION
- COMLINK - A communications/EW analytical and modeling tool A81-48547

TENSORS
- Surface-oriented coordinates for boundary-layer calculations in the case of general configurations [DGLR PAPER 81-014] A81-47557

TERMINAL GUIDANCE
- Realization of a method of extremal targeting in a problem of aircraft landing control A81-49943

THIN AIRFOILS
- Evaluation of two-dimensional subsonic oscillatory airforce coefficients and loading distributions A81-48480

THIN WALLED SHELLS
- Calculation of natural vibrations for thin-walled irregular reinforced shells of the helicopter fuselage type using the finite-element work method A81-48097

THIN WALLS
- Geometrically nonlinear theory for calculating thin rods of a wing profile A81-49935
- Strength calculation of thin-wall rods of significant taper A81-49937

THIN WINGS
- Calculation of the aerodynamic characteristics of a deformable wing, moving near a screen A81-49948

THREE DIMENSIONAL BOUNDARY LAYER
- Surface-oriented coordinates for boundary-layer calculations in the case of general configurations [DGLR PAPER 81-014] A81-47557

THRUST AUGMENTATION
- Graphite/polyimide augmentor and nozzle components --- of advanced military gas turbine engines [AIAA PAPER 81-1358] A81-49976

THRUST MEASUREMENT
- Determination of thrust and throttle-dependent drag for fighter aircraft [AIAA PAPER 81-1692] A81-48417

THRUST VECTOR CONTROL
- Investigation of the circulation control wing/upper surface blowing high-lift system on a low aspect ratio semispan model [AD-A103090] N81-32128

TILT ROTOR AIRCRAFT
- Mission potential of derivatives of the XV-15 tilt rotor research aircraft N81-33150

TIME LAG
- Time delays in flight simulator visual displays A81-48369

TOWING
- Responses to comments of Air Transport Association of America on aircraft towing feasibility study [DE81-029834] N81-33201

TRAILING EDGES
- Trailing edge noise prediction from measured surface pressures A81-48395

TRAILING-EDGE FLAPS
- Contributions to the theory of side edge flap noise [AIAA PAPER 81-2036] A81-48625

Propulsive lateral control nozzle
[NASA-CASE-LAR-12136-1] N81-33210

TRAINING SIMULATORS
The evolution of real-time digital simulation of aircraft for training applications
A81-48358

TRANSIENT OSCILLATIONS
Transient vibrations of elastic panels due to the impact of shock waves
A81-48385

TRANSMISSION LOSS
Theoretical and experimental evaluation of transmission loss of cylinders
[AIAA PAPER 81-1971] A81-48612

TRANSONIC FLOW
The calculation of transonic blade tip flow at helicopter rotors
[DGLR PAPER 81-025] A81-47554
Vortex bursting on slender delta wings in transonic flow and its influence on missile aerodynamic characteristics
[DGLR PAPER 81-047] A81-47622
Comparison of computational and experimental jet effects
[AIAA PAPER 81-1492] A81-49979
On the spanwise uniformity of wind tunnel test data of transonic airfoils
[NAL-TR-665] N81-32118

TRANSONIC WIND TUNNELS
European transonic wind tunnel ETW - Status of the project at the end of the predesign phase
[DGLR PAPER 81-027] A81-47563
Supplemental calibration of the AEDC-PWT 16 ft transonic tunnel aerodynamic test section
[AD-A102384] N81-32155

TRANSPORT AIRCRAFT
Application of advanced technologies to derivatives of current small transport aircraft
[NASA-CR-166197] N81-33190

TURBINE BLADES
Stability and flutter analysis of turbine blades at low speed
A81-47959
A process for protecting gas turbine blade cooling passages against degradation
A81-49209

TURBINE ENGINES
A technique for the implementation of nonlinear models as real-time digital simulations --- with application to aircraft turbine engine design
A81-48333

TURBOFAN ENGINES
Stability analysis of the twin mode model of coupled flexion-torsion vibrations in aeroengine fans
A81-47966
Turbomachinery noise studies of the AiResearch QCGAT engine with inflow control --- acoustic performance
[AIAA PAPER 81-2049] A81-48621
Effects of blade-vane ratio and rotor-stator spacing on fan noise with forward velocity
[AIAA PAPER 81-2032] A81-48628
Some modal-frequency spectra of fan noise
[AIAA PAPER 81-1990] A81-48636
An iterative finite element-integral technique for predicting sound radiation from turbofan inlets
[AIAA PAPER 81-1981] A81-49736
Design and evaluation of an integrated Quiet, Clean General Aviation Turbofan (QCGAT) engine and aircraft propulsion system
[NASA-CR-165185] N81-32147
Simplified off-design performance model of a day turbofan engine cycle
[NASA-TM-83204] N81-33206

TURBOMACHINERY
Analysis of the operation of air turborefrigeration plants and their use for on-the-ground air-conditioning of aircraft
A81-48196

TURBOPROP AIRCRAFT
The Lear Fan 2100
A81-49975

TURBULENCE EFFECTS
The influence of the airspeed on jet turbulence and the consequences for the jet noise
[DGLR PAPER 81-021] A81-47595

TURBULENCE METERS
Acoustic and turbulence measurements of a tone-excited jet with and without flight simulation
[AIAA PAPER 81-2007] A81-48640

TURBULENT JETS
An acoustic source modelling technique to predict the near sound field of axisymmetric turbulent jets
[AIAA PAPER 81-2022] A81-48606
The role of the helical jet mode in aerodynamic noise generation
[AIAA PAPER 81-1963] A81-48607

TWISTING
Choice of the optimal angular velocity of the twist of a flight vehicle
A81-49946

TWO DIMENSIONAL FLOW
Numerical experiments on unsteady flows through vibrating cascades
A81-47961

TWO PHASE FLOW
Droplet breakup regimes and criteria for their existence
A81-48079

U

UH-60A HELICOPTER
Fielding of an advanced helicopter. The UH-60A Black Hawk: Initial operational experience
N81-33141

ULTRASONIC FLAW DETECTION
Recognizing defects in carbon-fiber-reinforced plastics
[DGLR PAPER 81-057] A81-47565

UNDER SURFACE BLOWING
Prediction method for aeroacoustic loads on under the wing blown flaps
[AIAA PAPER 81-2038] A81-48644

UNSTEADY FLOW
Numerical experiments on unsteady flows through vibrating cascades
A81-47961
On the numerical analysis of stall flutter in turbine cascade
A81-47963

UPPER SURFACE BLOWING
Investigation of the circulation control wing/upper surface blowing high-lift system on a low aspect ratio semispan model
[AD-A103090] N81-32128
A flight test evaluation of the Ball-Bartoe jetwing propulsive lift concept
[AD-A103579] N81-33195

URBAN RESEARCH
Unrepresentative temperatures at a first-order meteorological station Washington National Airport
A81-48847

URBAN TRANSPORTATION
Published results of the program of university research. Transportation research results
[PB81-210130] N81-34108

USER MANUALS (COMPUTER PROGRAMS)
User's manual for a computer program to calculate discrete frequency noise of conventional and advanced propellers
[NASA-TM-83135] N81-32966

USER REQUIREMENTS
Development of a heliport classification method and an analysis of heliport real estate and airspace requirements
[AD-A102521] N81-32158

V

V/STOL AIRCRAFT
Vertical lift capabilities for the 80's and 90's
N81-33139
Ten years of US Marine Corps Harrier operations
N81-33140
Views on V/STOL tactical fighter aircraft: Technology needs and relationships to the runway denial problems
N81-33142
Historical overview of V/STOL aircraft technology
N81-33143
Recent progress in V/STOL aircraft technology
N81-33144

V/STOL aircraft technology in Canada
N81-33152
US military V/STOL: Who needs it? Wants it? Can afford it?
N81-33156

VANES
The effect of vane-frame design on rotor-stator interaction noise
[AIAA PAPER 81-2034] A81-48627

VARIABLE PITCH PROPELLERS
Performance prediction for light airplanes
A81-49374

VEHICLE WHEELS
A formulation of the shimmy problem for swiveling wheels
A81-47268

VERTICAL LANDING
An experimental investigation of VTOL flying qualities requirements or shipboard landings
[AD-A104137] N81-33199

VERTICAL TAKEOFF AIRCRAFT
An experimental investigation of VTOL flying qualities requirements or shipboard landings
[AD-A104137] N81-33199

VERY LOW FREQUENCIES
Errors of phase VLF-navigation systems under conditions of auroral disturbances
A81-47533

VIBRATION DAMPING
Damping of turbomachine blade variations by subsonic flow
A81-47957
Damping applications for vibration control; Proceedings of the Winter Annual Meeting, Chicago, IL, November 16-21, 1980
A81-47993
Damping applications in aero-propulsion systems
A81-47999

VIBRATION ISOLATORS
Procedure for evaluation of engine isolators for reduced structure-borne interior noise transmission
[AIAA PAPER 81-1970] A81-48608

VIBRATION MODE
Damage recognition and localization by means of differential modal analysis
[DGLR PAPER 81-056] A81-47603
Stability analysis of the twin mode model of coupled flexion-torsion vibrations in aeroengine fans
A81-47966
Finite strip analysis of singly curved skin-stringer structures
A81-48390

VISIBILITY
Emergency cabin lighting installations: An analysis of ceiling- versus lower cabin-mounted lighting during evacuation trials --- visibility
[AD-A103191] N81-33175

VOICE COMMUNICATION
Crosstalk levels of speech plus data in Remote Communication Air-Ground (RCAG)
[AD-A103351] N81-33182

VORTEX BREAKDOWN
Vortex bursting on slender delta wings in transonic flow and its influence on missile aerodynamic characteristics
[DGLR PAPER 81-047] A81-47622

VORTEX FLAPS
Wind-tunnel studies of advanced cargo aircraft concepts --- leading edge vortex flaps for drag reduction
[NASA-CR-164833] N81-32117

VORTEX SHEDDING
The role of the helical jet mode in aerodynamic noise generation
[AIAA PAPER 81-1963] A81-48607

VORTICES
Damping of turbomachine blade variations by subsonic flow
A81-47957

VULNERABILITY
Fielding of an advanced helicopter. The UH-60A Black Hawk: Initial operational experience
N81-33141
Views on V/STOL tactical fighter aircraft: Technology needs and relationships to the runway denial problems
N81-33142
Advanced composite aircraft electromagnetic design and synthesis
[SAND-81-1278C] N81-33200

W

WAKES
The calculation of separated flow at helicopter bodies
[DGLR PAPER 81-026] A81-47555
Damping of turbomachine blade variations by subsonic flow
A81-47957

WEAPON SYSTEMS
A new approach to weapon separation aerodynamics
[AIAA PAPER 81-1654] A81-48416

WEAPONS DELIVERY
Data acquisition and analysis system as a training device for simulated conventional weapon delivery
[NLR-MP-80027-U] N81-32164

WEATHER STATIONS
Unrepresentative temperatures at a first-order meteorological station Washington National Airport
A81-48547

WEAVING
Anti-symmetric elastic properties of composite plates of satin weave cloth
[NAL-TR-649T] N81-33238

WEIGHT REDUCTION
Development of the carbon fiber-reinforced side rudder for the Airbus
[DGLR PAPER 81-055] A81-47551
Structural synthesis - Its genesis and development
A81-49076

WELDED STRUCTURES
Sliding-seal electron beam slot welding of an aircraft wing closure beam
A81-48142

WELDING MACHINES
Sliding-seal electron beam slot welding of an aircraft wing closure beam
A81-48142

WIND MEASUREMENT
Onboard procedure for the measurement of wind shear gradients
[DGLR PAPER 81-060] A81-47612

WIND SHEAR
Onboard procedure for the measurement of wind shear gradients
[DGLR PAPER 81-060] A81-47612
Takeoff and missed approach under the influence of wind shear --- flight safety considerations
[TUBS/SFB-58-80-05-01] N81-32131
Simulator evaluation of the effects of reduced spoiler and thrust authority on a decoupled longitudinal control system during landings in wind shear
[NASA-TM-83188] N81-33211

WIND TUNNEL APPARATUS
Digital simulation for energy conservation in a large wind tunnel plant system
A81-48003
Wind Tunnels of NASA
[NASA-SP-440] N81-32153

WIND TUNNEL CALIBRATION
Supplemental calibration of the AEDC-PWT 16 ft transonic tunnel aerodynamic test section
[AD-A102384] N81-32155

WIND TUNNEL DRIVES
Analysis of the performance of the drive system and diffuser of the Langley unitary plan wind tunnel
[NASA-TM-83168] N81-33158

WIND TUNNEL MODELS
The half-model technique in the wind tunnel and its employment in the development of the Airbus family
[DGLR PAPER 81-118] A81-47587

WIND TUNNEL TESTS
European transonic wind tunnel ETW - Status of the project at the end of the predesign phase
[DGLR PAPER 81-027] A81-47563
The influence of the airspeed on jet turbulence and the consequences for the jet noise
[DGLR PAPER 81-021] A81-47595
Contribution to the determination of the drag coefficient for air breathing flight vehicles on the basis of wind tunnel measurements
[DGLR PAPER 81-036] A81-47604

Digital simulation for energy conservation in a large wind tunnel plant system
A81-48003
Effects of blade-vane ratio and rotor-stator spacing on fan noise with forward velocity
[AIAA PAPER 81-2032] A81-48628
Comparative acoustic wind-tunnel measurements and theoretical correlations on subsonic aircraft propellers at full-scale and model-scale
[AIAA PAPER 81-2004] A81-48634
Comparison of computational and experimental jet effects
[AIAA PAPER 81-1492] A81-49979
Wind-tunnel studies of advanced cargo aircraft concepts --- leading edge vortex flaps for drag reduction
[NASA-CR-164833] N81-32117
On the spanwise uniformity of wind tunnel test data of transonic airfoils
[NAL-TR-665] N81-32118
Effect of sweep and aspect ratio on the longitudinal aerodynamics of a spanloader wing in and out of ground effect --- wind tunnel tests
[NASA-TM-80199] N81-32119
Sting interference effects on the static dynamic and base pressure measurements of the standard dynamics model aircraft at Mach numbers 0.3 through 1.3
[AD-A102612] N81-32124
Recent progress in V/STOL aircraft technology
N81-33144
Experimental and theoretical study of three interacting, closely-spaced, sharp-edged 60 deg delta wings at low speeds
[NASA-CR-3460] N81-33160
Wind tunnel testing of a windshield material or supersonic aircraft
[AD-A103383] N81-33163

WIND TUNNELS
Wind Tunnels of NASA
[NASA-SP-440] N81-32153

WINDSHIELDS
Wind tunnel testing of a windshield material or supersonic aircraft
[AD-A103383] N81-33163

WING FLAPS
Prediction method for aeroacoustic loads on under the wing blown flaps
[AIAA PAPER 81-2038] A81-48644

WING LOADING
Active gust- and maneuver load control concepts, taking into account, as example, the Airbus A300. I - Design of a controller in the temporal domain for the alleviation of gust loads and the control of the effectiveness for stochastic gusts
[DGLR PAPER 81-065A] A81-47552
Active gust- and maneuver load reduction concepts, taking into account, as an example, the Airbus A300. II - Design of a controller for gust and maneuver load reduction in the frequency range
[DGLR PAPER 81-065B] A81-47553

WING OSCILLATIONS
Evaluation of two-dimensional subsonic oscillatory airforce coefficients and loading distributions
A81-48480

WING PANELS
Sliding-seal electron beam slot welding of an aircraft wing closure beam
A81-48142
The effect of the skewness of the skin panels on stresses in conical wings
A81-49930

WING PROFILES
Surface-oriented coordinates for boundary-layer calculations in the case of general configurations
[DGLR PAPER 81-014] A81-47557
Geometrically nonlinear theory for calculating thin rods of a wing profile
A81-49935

WING ROOTS
Solar powered aircraft
[NASA-CASE-LAR-12615-1] N81-32138

WING TIP VORTICES
Investigations of vortex formation on wings with cropped leading edges
[DGLR PAPER 81-046] A81-47601

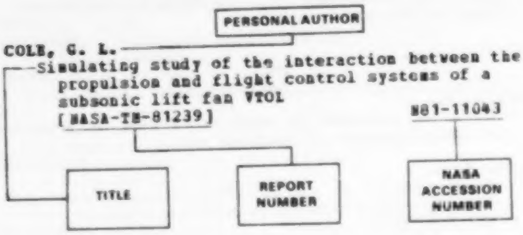
WINGS
Investigation of unsteady airloads on wings with oscillating control for active control purposes
[AGARD-R-699] N81-33161
Evaluation of pressure and thermal data from a wind tunnel test of a large-scale, powered, STOL fighter model
[NASA-CR-166170] N81-33162
A flight test evaluation of the Ball-Bartoe jetwing propulsive lift concept
[AD-A103579] N81-33195

Y

YC-14 AIRCRAFT
Prediction of jet exhaust noise on airframe surfaces during flight
[AIAA PAPER 81-2035] A81-48626

PERSONAL AUTHOR INDEX

Typical Personal Author Index Listing



PERSONAL AUTHOR
COLE, G. L.
Simulating study of the interaction between the propulsion and flight control systems of a subsonic lift fan VTOL
[NASA-TM-81239]
N81-11043
TITLE
REPORT NUMBER
NASA ACCESSION NUMBER

Listings in this index are arranged alphabetically by personal author. The title of the document provides the user with a brief description of the subject matter. The report number helps to indicate the type of document cited (e.g., NASA report, translation, NASA contractor report). The accession number is located beneath and to the right of the title, e.g. N81-11043. Under any one author's name the accession numbers are arranged in sequence with the *IAA* accession numbers appearing first.

A

ADACHI, T.
On the numerical analysis of stall flutter in turbine cascade
A81-47963

ADAMS, J. J.
Simulator evaluation of separation of display parameters in path-following tasks

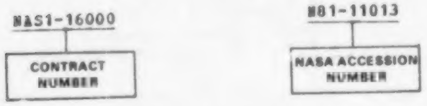
CONTRACT NUMBER INDEX

AERONAUTICAL ENGINEERING / *A Continuing Bibliography (Suppl. 143)* JANUARY 1982

Typical Contract Number Index Listing



Listings in this index are arranged alphanumerically by contract number. Under each contract number, the accession numbers denoting documents that have been produced as a result of research done under that contract are arranged in ascending order with the *IAA* accession numbers appearing first. The accession number denotes the number by which the citation is identified in either the *IAA* or *STAR* section.

PUBLIC COLLECTIONS OF NASA DOCUMENTS

DOMESTIC

NASA distributes its technical documents and bibliographic tools to eleven special libraries located in the organizations listed below. Each library is prepared to furnish the public such services as reference assistance, interlibrary loans, photocopy service, and assistance in obtaining copies of NASA documents for retention.

CALIFORNIA
University of California, Berkeley
COLORADO
University of Colorado, Boulder
DISTRICT OF COLUMBIA
Library of Congress
GEORGIA
Georgia Institute of Technology, Atlanta
ILLINOIS
The John Crerar Library, Chicago

MASSACHUSETTS
Massachusetts Institute of Technology, Cambridge
MISSOURI
Linda Hall Library, Kansas City
NEW YORK
Columbia University, New York
OKLAHOMA
University of Oklahoma, Bizzell Library
PENNSYLVANIA
Carnegie Library of Pittsburgh
WASHINGTON
University of Washington, Seattle

NASA publications (those indicated by an "*" following the accession number) are also received by the following public and free libraries:

CALIFORNIA
Los Angeles Public Library
San Diego Public Library
COLORADO
Denver Public Library
CONNECTICUT
Hartford Public Library
MARYLAND
Enoch Pratt Free Library, Baltimore
MASSACHUSETTS
Boston Public Library
MICHIGAN
Detroit Public Library
MINNESOTA
Minneapolis Public Library and Information Center
NEW JERSEY
Trenton Public Library

NEW YORK
Brooklyn Public Library
Buffalo and Erie County Public Library
Rochester Public Library
New York Public Library
OHIO
Akron Public Library
Cincinnati and Hamilton County Public Library
Cleveland Public Library
Dayton Public Library
Toledo and Lucas County Public Library
TEXAS
Dallas Public Library
Fort Worth Public Library
WASHINGTON
Seattle Public Library
WISCONSIN
Milwaukee Public Library

An extensive collection of NASA and NASA-sponsored documents and aerospace publications available to the public for reference purposes is maintained by the American Institute of Aeronautics and Astronautics, Technical Information Service, 555 West 57th Street, 12th Floor, New York, New York 10019.

EUROPEAN

An extensive collection of NASA and NASA-sponsored publications is maintained by the British Library Lending Division, Boston Spa, Wetherby, Yorkshire, England. By virtue of arrangements other than with NASA, the British Library Lending Division also has available many of the non-NASA publications cited in STAR. European requesters may purchase facsimile copy of microfiche of NASA and NASA-sponsored documents, those identified by both the symbols "#" and "*", from: ESA - Information Retrieval Service, European Space Agency, 8-10 rue Mario-Nikis, 75738 Paris CEDEX 15, France.

NASA SP-7037(144)

A CUMULATIVE INDEX
TO
AERONAUTICAL ENGINEERING
A Continuing Bibliography

This Cumulative Index supersedes the indexes contained in supplements [SP-7037(132) through SP-7037(143)] published by NASA during 1981.

Scientific and Technical Information Branch 1982
National Aeronautics and Space Administration
Washington, DC

SPECIAL NOTICE

The abstract sections of the supplements of *Aeronautical Engineering* can be bound separately. Individual abstracts can be located readily by means of the page numbers given at each entry, e.g., p0630 N81-32290. To assist the user in binding Supplements SP-7037 (132) through SP-7037 (143), a title page is included in the back of this Cumulative Index.

This index is available as NTISUB/141/093 from the National Technical Information Service (NTIS), Springfield, Virginia 22161 at the price of $10.00 domestic; $20.00 foreign.

INTRODUCTION

WHAT THIS CUMULATIVE INDEX IS

This publication is a cumulative index to the abstracts contained in NASA SP-7037(132) through NASA SP-7037(143) of *Aeronautical Engineering: A Continuing Bibliography*. NASA SP-7037 and its supplements have been compiled through the cooperative efforts of the American Institute of Aeronautics and Astronautics (AIAA) and the National Aeronautics and Space Administration (NASA). Entries prepared by the two contributing organizations are identified as follows:

1. NASA entries by their *STAR* accession numbers (N81-10000 series).
2. AIAA entries by their *IAA* accession numbers (A81-10000 series).

HOW THIS CUMULATIVE INDEX IS ORGANIZED

This Cumulative Index includes a subject index, a personal author index, a corporate source index, a contract number index, and a report/accession number index.

HOW TO USE THE SUBJECT INDEX

Two types of cross-references appear in the subject index:

1. Use (U) references indicate that the subject term is not "postable," i.e., not a valid term, and the following term or terms are used instead. For example:

   AIRCRAFT PROTUBERANCES
   U PROTUBERANCES
   FLIGHT PERFORMANCE
   U FLIGHT CHARACTERISTICS

2. Narrower Term (NT) references refer the user to more specific headings in the same subject area, under which additional material on the subject may be found. For example:

   FLOW RESISTANCE
   NT AERODYNAMIC DRAG
   NT FRICTION DRAG
   NT SUPERSONIC DRAG

In addition, a searcher may use the title or title and title extension in the index to narrow further his quest for particular items. This is because subject terms readily include more than one class of document. For example:

AIRLINE OPERATIONS
All-weather operations, including
pilot role, instrument landing
systems and guidance aids.
Airport congestion as constraint on
air travel, considering runway
capacity and adjusted demand.

illustrates a case where two references on different topics are listed under the same subject term.

HOW TO USE THE PERSONAL AUTHOR INDEX

All personal authors used in the abstract-section citations in the individual Supplements appear in the index. Differences in transliteration schemes may require multiple searching of the index for variants of an author's name. For example:

EMELIANOV, M. D.
and
YEMELYANOV, M. D.

HOW TO USE THE CORPORATE SOURCE INDEX

The corporate source index entries are abridged versions of the corporate sources used in the abstract-section citations in the individual Supplements. The corporate source supplementary (organizational component) does not appear in the index. For example:

BOEING CO., SEATTLE, WASH. MILITARY AIRCRAFT SYSTEMS DIV. (Source citation entry)
BOEING CO., SEATTLE, WASH. (Source index entry)

HOW TO USE THE CONTRACT NUMBER INDEX

All contract numbers that are identified in the abstract-section citations in the individual Supplements appear in this index. Changes by agencies in the style in which contract numbers are presented may require multiple searching for variants. For example:

AF 33(615)-71-C-1758
F33615-71-C-1758

HOW TO USE THE REPORT/ACCESSION NUMBER INDEX

All report numbers that have been assigned by the corporate source, monitoring agency or cataloging activity appear in this index. Variations in initial cataloging may result in different report number series. For example:

TP-924
ONERA-TP-924

IDENTIFICATION OF DESIRED SUPPLEMENT

The abstract and descriptive cataloging for any accession number selected from the indexes may be found in the appropriate Supplement. The page-number range of each Supplement appears on the inside front cover of this index. Once the range of page numbers containing the selected accession number is located in the second column, the desired Supplement number will be found in the first column. For example:

Page 281 will be found in Supplement 137.

AVAILABILITY OF DOCUMENTS

Information concerning the availability of documents announced in the *Aeronautical Engineering* supplements is found in the Introduction to the most currently issued supplement.

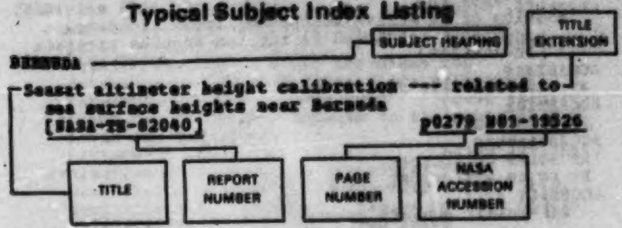
CORPORATE SOURCE INDEX C-1
CONTRACT NUMBER INDEX D-1
REPORT/ACCESSION NUMBER INDEX E-1

SUBJECT INDEX

AERONAUTICAL ENGINEERING / *A Continuing Bibliography* JANUARY 1982

1981 Cumulative Index

Typical Subject Index Listing



The title is used to provide a description of the subject matter. When the title is insufficiently descriptive of the document content, a title extension is added, separated from the title by three hyphens. The *STAR* or *IAA* accession number is included in each entry to assist the user in locating the abstract in the abstract section of an individual issue of *Aeronautical Engineering*. If applicable a report number is also included as an aid in identifying the document. The page and accession numbers are located beneath and to the right of the title. Under any one subject heading the accession numbers are arranged in sequence with the *IAA* accession numbers appearing first.

A

A-6 AIRCRAFT
  Circulation Control Wing /CCW/ flight tests
    p0122 A81-19469

    p0030 N81-11120
  Helicopter gearbox testing
    p0488 N81-26137
ACCELERATION
  Further studies of the influence of thermal effects on the predicted acceleration of gas turbines
    [ASME PAPER 81-GT-21] p0311 A81-29936
ACCELERATION (PHYSICS)
 NT ANGULAR ACCELERATION
 NT DECELERATION
 NT HIGH ACCELERATION
 NT SPIN REDUCTION

NT TRANSVERSE ACCELERATION
Simulation of apparent acceleration --- on flight test stands
p0223 A81-23405
The behavior of quartz oscillators in the presence of accelerations --- in missile and aircraft time-frequency navigation systems
[ONERA, TP NO. 1981-31] p0351 A81-31285
Effect of acceleration switching during INS in-flight alignment
p0458 A81-38857
Kinematic properties of rotary-wing and fixed-wing aircraft in steady coordinated high-g turns
[AIAA PAPER 81-1855] p0560 A81-44554
Two-axis, fluidically controlled thrust vector control system for an ejection seat
[AD-A093868] p0204 N81-16996

ACCELERATION STRESSES (PHYSIOLOGY)
NT CENTRIFUGING STRESS
Development of a flight simulation capability in the dynamic environment simulator
[AIAA 81-0978] p0415 A81-36566
Physiological effects of high-G flight - Their impact on flight simulator design
[AIAA 81-0986] p0416 A81-36573
BIOCONAID system (bionic control of acceleration induced dimming)
[AD-A102510] p0601 N81-31234

ACCELERATION TOLERANCE
Escape from military fighters - A modern perspective
p0176 A81-22096
Evaluation of AFIT/F-16 restraint concepts in the + or - 2Gy environment
[AD-A094323] p0249 N81-18034

ACCELEROMETERS
Determination of in-flight helicopter loads
p0573 A81-46618
Statistical review of counting accelerometer data for Navy and Marine fleet aircraft
[AD-A095617] p0334 N81-20070
Airplane wing vibrations due to atmospheric turbulence
[NASA-CR-3431] p0438 N81-24679
Statistical review of counting accelerometer data for Navy and Marine fleet aircraft from 1 January 1962 to 31 December 1980
[AD-A102495] p0596 N81-31187

ACCEPTABILITY
Noncoherent C-band transponder standards
[AD-A091282] p0095 N81-13251

ACCEPTANCE
U ACCEPTABILITY

ACCIDENT INVESTIGATION
NT AIRCRAFT ACCIDENT INVESTIGATION
Civil aviation safety. IV - Accident severity
p0068 A81-16422
The apparent ignoring of pilot fatigue by the NTSB in airline crashes
p0177 A81-22104
Evaluation of safety programs with respect to the causes of general aviation accidents. Volume 2: Appendices
[AD-A089181] p0023 N81-10023
Annual review of aircraft accident data, U.S. General aviation calendar year 1978
[PB80-201916] p0024 N81-10028
Experiences with flight recorders obtained by analyzing aircraft accidents
p0328 N81-20019
Definition of investigative areas for human-factor aspects of aircraft accidents
[AD-A101601] p0580 N81-30102
Procedural handbook for escape system/accident investigation helmet usage aspects, including failure analysis
[AD-A102803] p0628 N81-32130

ACCIDENT PREVENTION
Wind shear effects on aircraft - Low-level shear and clear-air turbulence as accident causes
p0067 A81-16136
Helicopter alarms - The use of ALAT incident and accident record cards
p0100 A81-16689
Death and injury in aerial spraying - Pre-crash, crash, and post-crash prevention strategies
p0177 A81-22115
Evaluation of safety programs with respect to the causes of general aviation accidents. Volume 2: Appendices
[AD-A089181] p0023 N81-10023
CAT altitude avoidance system
[NASA-CASE-NPO-15351-1] p0202 N81-16677
Evaluation of explosafe. Explosion suppression system for aircraft fuel tank protection
[AD-A093125] p0209 N81-17047
Wind shear systems implementation plan, benefit/cost study
[AD-A094168] p0253 N81-18055
Results of an active beacon collision avoidance experiment conducted in the Los Angeles airspace
[AD-A096285] p0340 N81-21053

ACCIDENTS
NT BIRD-AIRCRAFT COLLISIONS

ACCRETION
U DEPOSITION

ACCUMULATORS
NT SOLAR COLLECTORS
NT SOLAR REFLECTORS

ACCURACY
Air-to-air gunnery systems test and evaluation
p0544 N81-29073
Impact of prediction accuracy on costs - noise technology applications in helicopters
[AD-A101768] p0589 N81-30911

ACID RAIN
Prevention of corrosion and fatigue failure of helicopter gas turbine compressors
[NLR-MP-80024-U] p0600 N81-31222

ACOUSTIC ATTENUATION
NT SHOCK WAVE ATTENUATION
Sandwich structures with high transmission loss
p0151 A81-20069
Theoretical and experimental evaluation of transmission loss of cylinders
[AIAA PAPER 81-1971] p0618 A81-48612
Analysis of pressure spectra measurements in a ducted combustion system
[NASA-TM-81583] p0146 N81-15768
Evaluation of alternative procedures for atmospheric absorption adjustments during noise certification. Volume 2: Computer program
[AD-A093267] p0221 N81-17853
Lateral attenuation of high-by-pass ratio engined aircraft noise
[NASA-TM-81968] p0394 N81-23862
An experimental investigation of a large delta P settling chamber for a supersonic pilot quiet tunnel
[NASA-CR-3436] p0434 N81-24112
Study of noise reduction characteristics of multilayered panels and dual pane windows with Helmholtz resonators
[NASA-CR-164370] p0438 N81-24857
Static tests of excess ground attenuation at Wallops Flight Center
[NASA-CR-3435] p0491 N81-26846
Flying helmet attenuation, and the measurement, with particular reference to the Mk 4 helmet
p0604 N81-31473

ACOUSTIC COMBUSTION
U COMBUSTION STABILITY

ACOUSTIC DUCTS
Acoustic structures --- titanium brazing method for producing honeycomb structures for jet engine noise reduction
p0001 A81-10272
Application of the equivalent surface source method to the acoustics of duct systems with non-uniform wall impedance
p0055 A81-13824
Sound radiation from a finite length unflanged circular duct with uniform axial flow. I - Theoretical analysis. II - Computed radiation characteristics
p0100 A81-16712
A general mapping procedure for variable area duct acoustics
[AIAA PAPER 81-0094] p0160 A81-20597
Numerical techniques in linear duct acoustics - A status report
[ASME PAPER 80-WA/NC-2] p0170 A81-21120
Development of an analytical technique for the optimization of jet engine and duct acoustic liners
[NASA-CR-164872] p0639 N81-33205

ACOUSTIC EMISSION
Acoustic emission and corrosion
p0153 A81-20211

The use of acoustic emission for detecting and evaluating of fatigue cracks severity during static and cyclic loading of structure elements
p0153 A81-20214
In-flight fatigue crack monitoring using acoustic emission
p0361 A81-32857
Acoustic emission techniques for in-flight structural monitoring
[SAE PAPER 801211] p0404 A81-34219
Acoustic spectrum analysis for gyro bearings
[AIAA PAPER 81-1616] p0524 A81-43128
Acoustic emission as a NDE technique for determining composite rotor blade reliability
[AD-A090440] p0076 N81-12070
Application of optical methods to the study of jet noise and turbulence
[ISL-CO-201/80] p0147 N81-15819
Evaluation of alternative procedures for atmospheric absorption adjustments during noise certification. Volume 3: Tables of atmospheric absorption losses --- aircraft noise
[AD-A093144] p0221 N81-17848
VCE early acoustic test results of General Electric's high-radius ratio coannular plug nozzle
p0245 N81-17999
The use of acoustic emission for detection of active corrosion and degraded adhesive bonding in aircraft structure
[AD-A102923] p0631 N81-32522
ACOUSTIC EXCITATION
Acoustic fatigue strength of fiber-reinforced plastic panels
p0169 A81-20873
Acoustic and turbulence measurements of a tone-excited jet with and without flight simulation
[AIAA PAPER 81-2007] p0621 A81-48640
Effect of excitation on coaxial jet noise as observed by an elliptic mirror
[AIAA PAPER 81-2044] p0621 A81-48651
ACOUSTIC FATIGUE
Acoustic fatigue assessment in the design of aerospace vehicles
p0059 A81-14395
Sonic fatigue design techniques for graphite-epoxy stiffened-skin panels
[AIAA 81-0633] p0305 A81-29488
ACOUSTIC GENERATORS
U SOUND GENERATORS
ACOUSTIC IMPEDANCE
Effect of a semi-annular thermal acoustic shield on jet exhaust noise
[NASA-TM-81615] p0044 N81-11770
ACOUSTIC MEASUREMENTS
NT NOISE MEASUREMENT
Experiments on effective source locations and velocity dependence of the broad band noise from a rotating rod
p0016 A81-11724
Simple method for prediction of aircraft noise contours
p0050 A81-13217
Design, construction and testing of an improved aircraft propeller
p0449 A81-37635
Noise reduction test facilities at Douglas Aircraft
p0570 A81-46375
Aircraft noise identification system - Application for inflight position detector
p0570 A81-46376
The impact and future direction of aircraft noise certification
p0570 A81-46377
Theoretical and experimental evaluation of transmission loss of cylinders
[AIAA PAPER 81-1971] p0618 A81-48612
Effects of blade-vane ratio and rotor-stator spacing on fan noise with forward velocity
[AIAA PAPER 81-2032] p0620 A81-48628
Comparative acoustic wind-tunnel measurements and theoretical correlations on subsonic aircraft propellers at full-scale and model-scale
[AIAA PAPER 81-2004] p0620 A81-48634
Improved methods for fan sound field determination
[NASA-CR-165188] p0147 N81-15769
Helicopter noise contour development techniques and directivity analysis
[AD-A093426] p0221 N81-17851
Aerodynamic and acoustic behavior of a YF-12 inlet at static conditions
[NASA-CR-163106] p0342 N81-21039
Study of an experimental probe for the measurement of the acoustic pressure inside an air flow
[ESA-TT-633] p0344 N81-21366
Handbook of aircraft noise metrics
[NASA-CR-3406] p0345 N81-21871
Comparison of predicted engine core noise with proposed FAA helicopter noise certification requirements
[NASA-TM-81739] p0381 N81-22039
Classification of operating conditions of turbomachines from solid borne sound
p0382 N81-23015
Quiet Clean Short-haul Experimental Engine (QCSEE); acoustic performance of a 50.8-cm (20 inch) diameter variable pitch fan and inlet, test results and analysis, volume 1
[NASA-CR-135117] p0497 N81-27097
Gun harmonisation using the sector acoustic miss distance indicator
p0544 N81-29074
ACOUSTIC NOZZLES
Flight and tunnel test results of the MDC mechanical jet noise suppressor nozzle
p0245 N81-18000
ACOUSTIC PROPAGATION
Propagation of three-dimensional acoustic perturbations in channels of variable cross-sectional area at frequencies close to cutoff frequency
p0119 A81-19330
The sonic boom from an aircraft flying along an arbitrary path in a stratified atmosphere in the presence of a three-component wind
p0123 A81-19636
Convective amplification of gas turbine engine internal noise sources
p0171 A81-21505
Effect of a semi-annular thermal acoustic shield on jet exhaust noise
p0178 A81-22532
The dominant acoustic radiation surfaces of a helicopter cabin
p0468 A81-40102
Analytical characteristics methods: Applications
[VKI-PREPRINT-1980-10] p0021 N81-10011
The propeller tip vortex. A possible contributor to aircraft cabin noise
[NASA-TM-81760] p0280 N81-22030
ACOUSTIC PROPERTIES
NT ACOUSTIC IMPEDANCE
NT ACOUSTIC SCATTERING
NT ACOUSTIC VELOCITY
NT SOUND INTENSITY
Sound radiation from a finite length unflanged circular duct with uniform axial flow. I - Theoretical analysis. II - Computed radiation characteristics
p0100 A81-14712
Acoustic radiation from honeycomb sandwich plates
p0151 A81-20070
Acoustics of rotors utilizing circulation control
[AIAA PAPER 81-0092] p0160 A81-20596
Perspectives on jet noise
[AIAA PAPER 81-0428] p0168 A81-20829
Effect of facility variation on the acoustic characteristics of three single stream nozzles
p0178 A81-22534
Evaluation of the acoustic and aerodynamic characteristics of several slot-baffle configurations for transonic wind tunnel walls
[AD-A093957] p0217 N81-17106
ACOUSTIC RADIATION
U SOUND WAVES
ACOUSTIC SCATTERING
An experimental study of transmission, reflection and scattering of sound in a free jet flight simulation facility and comparison with theory
p0289 A81-28943
A study of the effect of terrain on helicopter noise propagation by acoustical modeling
[AD-A097626] p0394 N81-23864
ACOUSTIC SIMULATION
Acoustic facilities for human factors research at NASA Langley Research Center: Description and operational capabilities
[NASA-TM-81975] p0446 N81-25765

ACOUSTIC STABILITY
U FREQUENCY STABILITY
ACOUSTIC VELOCITY
Two methods for calculating the load on the surface of a slender body executing axisymmetric vibrations in a sonic gas flow
p0004 A81-10920
Calculation of viscous, sonic flow over hemisphere-cylinder at 19 deg incidence - The capturing of nose vortices
[AIAA PAPER 81-0189] p0162 A81-20661
Charts for determining potential minimum sonic-boom overpressures for supersonic cruise aircraft
[NASA-TP-1820] p0337 N81-21016
ACOUSTIC VIBRATIONS
U SOUND WAVES
ACOUSTICS
NT AEROACOUSTICS
NT PSYCHOACOUSTICS
Transonic rotor noise - theoretical and experimental comparisons

Tabulations of ambient ozone data obtained by GASP airliners, March 1975 to December 1977
[NASA-TM-81528] p0096 N81-13568

AERIAL RUDDERS
Airbus - Rudder unit in carbon fiber technology
p0451 A81-37651
Development of the carbon fiber-reinforced side rudder for the Airbus
[DGLR PAPER 81-055] p0607 A81-47551
Thrust augmented spin recovery device
[NASA-CASE-LAR-11970-2] p0275 N81-19130
Manufacturing development of DC-10 advanced rudder
[NASA-CR-159060] p0494 N81-27077

AEROACOUSTICS
An experimental investigation of jet screech by air jet impingement on solid boundaries
p0005 A81-11302
Some thoughts on the effects of flight on jet noise as observed in actual flight and in wind tunnels
p0016 A81-11723
Sound generation by vortex shedding from a profile within a channel
p0054 A81-13570
Influence of boundary-layer suction on the emission spectrum on a thin plate performing oscillations under the action of pressure pulsations --- in aircraft noise reduction
p0054 A81-13573
Application of the equivalent surface source method to the acoustics of duct systems with non-uniform wall impedance
p0055 A81-13824
The effects of noise on laminar flow control drag reduction systems
p0058 A81-14390
Radiation boundary conditions for wave-like equations --- numerical jet acoustics experimentation
p0153 A81-20223
Sound sources in aerodynamics - Fact and fiction
[AIAA PAPER 81-0056] p0159 A81-20570
Experiments on the linear and non-linear evolution of the double helical instability in jets
[AIAA PAPER 81-0415] p0168 A81-20818
Generation of vortex noise in flow past a profile in a channel
p0238 A81-26134
Influence of boundary-layer suction on the spectrum of radiation from a thin plate vibrating under the action of pressure fluctuations --- in aircraft noise reduction
p0238 A81-26137
Discussion of the pressure-source aerosonic theory and of Doak's criticism
p0238 A81-26189
The displacement-thickness theory of trailing edge noise
p0348 A81-30785
Noise characteristics of two parallel jets with unequal flow
[AIAA PAPER 80-0168] p0354 A81-31601
The NASA high-speed turboprop program
[SAE PAPER 801120] p0396 A81-34156
Trailing-edge airframe noise source studies on aircraft wings
[AIAA PAPER 80-0976] p0411 A81-35634
The dominant acoustic radiation surfaces of a helicopter cabin
p0468 A81-40102
Acoustic shock waves generated by a transonic helicopter blade
[AHS 80-63] p0479 A81-40186

Aerodynamic and acoustic behavior of a YF-12 inlet at static conditions
[AIAA PAPER 81-1597] p0508 A81-40972
Pressure fluctuations on the surface of a small passenger aircraft. I - Periodic disturbances caused by the rotation of the propeller
p0561 A81-44615
Pressure fluctuations on the surface of a small passenger aircraft. II - The effect of the turbulent boundary layer
p0562 A81-44618
An acoustic source modelling technique to predict the near sound field of axisymmetric turbulent jets
[AIAA PAPER 81-2022] p0618 A81-48606
Contributions to the theory of side edge flap noise
[AIAA PAPER 81-2036] p0619 A81-48625
Comparative acoustic wind-tunnel measurements and theoretical correlations on subsonic aircraft propellers at full-scale and model-scale
[AIAA PAPER 81-2004] p0620 A81-48634
Mixer nozzle aeroacoustic characteristics for the energy efficient engine
[AIAA PAPER 81-1994] p0621 A81-48639
Acoustic and turbulence measurements of a tone-excited jet with and without flight simulation
[AIAA PAPER 81-2007] p0621 A81-48640
Prediction method for aeroacoustic loads on under the wing blown flaps
[AIAA PAPER 81-2038] p0621 A81-48644
A novel airborne technique for free-field measurements of aircraft noise above the flight path with application to noise-shielding studies
[AIAA PAPER 81-2028] p0621 A81-48647
Noise radiated from inverted velocity profile jets under simulated flight
[AIAA PAPER 81-2026] p0623 A81-49729
Shielding concepts for jet noise
[AIAA PAPER 81-2020] p0623 A81-49730
Noise and noise abatement in fans and blowers: A review
[DFVLR-FB-80-16] p0130 N81-14796
Analysis of pressure spectra measurements in a ducted combustion system
[NASA-TM-81583] p0146 N81-15760
Fluid-dynamic and aeroacoustic investigations of shrouded jets --- noise prediction (aircraft)
p0256 N81-18318
Coupling of unsteady lift to acoustic duct modes in an axial flow fan
[AD-A095080] p0274 N81-19124
Airframe noise of a small model transport aircraft and scaling effects --- Boeing 747
[NASA-TP-1858] p0380 N81-22832
Comparison of NASA and contractor results from aeroacoustic tests of QCSEE OTW engine
[NASA-TM-81761] p0443 N81-25079
Aeroacoustics of a porous plug jet noise suppressor
[NASA-CR-164549] p0500 N81-27084
Unsteady swirling flows in gas turbines --- aircraft engines and aeroacoustics
[AD-A102852] p0629 N81-32150
User's manual for a computer program to calculate discrete frequency noise of conventional and advanced propellers

Aerodynamic design of a ducted propeller - Optimization of efficiency
p0102 A81-17146

AERODYNAMIC CHARACTERISTICS CONTD

Variational principles and generalized variational principles for the hybrid aerodynamic problem of airfoil cascades on an arbitrary stream sheet of revolution
p0107 A81-17741

Aerodynamic calculations and design of subcritical aerofoils
p0108 A81-17804

An aerodynamic design method for transonic axial flow compressor stage
p0108 A81-17805

Characteristics of the velocity field near a wing-body combination located at an angle of attack to an oncoming supersonic flow
p0119 A81-19337

Drag reduction through formation flight
[DGLR PAPER 80-106] p0120 A81-19393

Experimental investigation of a right angle wing with partially separated flow with and without ground effects
[DGLR PAPER 80-111] p0120 A81-19397

Conditions of generation and methods of damping the inlet vortex of a turbojet engine
p0121 A81-19442

Nonlinear aerodynamic characteristics of a thin airfoil of arbitrary plane configuration
p0123 A81-19629

Lifting-line theory of oblique wings - Application of the Galerkin method to the lifting-line equation
p0149 A81-19873

Experimental study of the influence of supports on the aerodynamic loads on an ogive cylinder at high angles of attack
[AIAA PAPER 81-0007] p0156 A81-20531

Wing-alone aerodynamic characteristics at high angles of attack
[AIAA PAPER 81-0008] p0157 A81-20532

An analytical solution of lift loss for a round planform with a central lifting jet
[AIAA PAPER 81-0011] p0157 A81-20535

Numerical optimization of circulation control airfoils
[AIAA PAPER 81-0016] p0157 A81-20540

Aircraft lateral parameter estimation from flight data with unsteady aerodynamic modelling
[AIAA PAPER 81-0221] p0162 A81-20684

Application of aerodynamic jump prediction theory to supersonic, high fineness ratio, cruciform finned bodies
[AIAA PAPER 81-0222] p0162 A81-20685

The aerodynamics of inverted leading edge flaps on delta wings
[AIAA PAPER 81-0356] p0165 A81-20775

An analysis of gap effects on wing-elevon aerodynamic characteristics
[AIAA PAPER 81-0364] p0166 A81-20783

A parametric study of the static longitudinal aerodynamic characteristics of parallel lift delta wing configurations at low Reynolds numbers
[AIAA PAPER 81-0409] p0168 A81-20814

Spanwise distribution of control points in the method of finite elementary solutions
[AIAA PAPER 79-1879] p0169 A81-21011

Effect of rear stagnation point position and trailing edge bluntness on airfoil characteristics
p0170 A81-21013

The influence of a wake splitter plate on the aerodynamic characteristics of a two-dimensional cylinder
p0226 A81-23949

Research on vortex bursting in compressible flow --- Thesis
p0230 A81-24477

Recent developments in integral equation method in transonic flow
p0234 A81-25384

Numerical study of stream surface structure near highly loaded wings
p0235 A81-25682

An analytical study of nonlinear stabilization during ballistic descent
p0237 A81-26028

Some aerodynamic properties of cones in viscous supersonic flow
p0237 A81-26119

Electromagnetic precipitation and ducting of particles in turbulent boundary layers
p0239 A81-26506

Aerodynamic study of flat turbine cascades with additional blades in blade passages
p0281 A81-27373

Aircraft stability at high incidence
p0282 A81-27878

Aerodynamic calculation of turbine stator cascades with curvilinear leaned blades and some experimental results
p0293 A81-29072

Calculation of the aerodynamic characteristics of aircraft with jet mechanization
p0299 A81-29301

A study of the effect of store aerodynamics of wing/store flutter
[AIAA 81-0604] p0304 A81-29467

Development of a large-scale wind tunnel for the simulation of turbomachinery airfoil boundary layers
[ASME PAPER 81-GT-6] p0310 A81-29931

Mathematical model of the linear unsteady aerodynamics of the entire aircraft
p0349 A81-31039

Subsonic and transonic flow on a wing at different sweep angles. I
p0351 A81-31249

Subsonic and transonic flow on a wing at different sweep angles. II
p0351 A81-31250

Effectiveness of leading-edge vortex flaps on 60 and 75 degree delta wings
p0352 A81-31368

Unsteady aerodynamics of an aerofoil at high angle of incidence performing various linear oscillations in a uniform stream
p0357 A81-32017

Comparison of computed and measured unsteady pressure fields on a supercritical wing
[ONERA, TP NO. 1981-12] p0359 A81-32541

Experimental study of the separation at the trailing edge of an axisymmetrical contoured after-body
p0365 A81-33281

Study of a propulsive system --- aerodynamic characteristics of proposed model
p0366 A81-33673

Vortex-flow aerodynamics - An emerging design capability
p0366 A81-33717

An experimental evaluation of the performance deficit of an aircraft engine starter turbine
[SAE PAPER 801137] p0397 A81-34168

Preliminary aerodynamic characteristics of several advanced VSTOL fighter/attack aircraft concepts
[SAE PAPER 801178] p0400 A81-34191

Calculation of supersonic flow past interfering wings
p0413 A81-36455

Calculation of the nonlinear aerodynamic characteristics of a wing of finite span
p0417 A81-36738

Design, construction and testing of an improved aircraft propeller
p0449 A81-37635

Integrated wing-engine system for airliners
p0450 A81-37638

Aerodynamic efficiency of the wing of new technology, a comparison of design expectation and flight test result
p0450 A81-37645

Aerodynamic features of designed strake-wing configurations
[AIAA PAPER 81-1214] p0454 A81-38084

Aerodynamic characteristics of two VSTOL fighter configurations
[AIAA PAPER 81-1292] p0454 A81-38119

Tests of air inlets at Reynolds numbers comparable to flight in the ONERA F1 and S1MA wind tunnels
[ONERA, TP NO. 1981-36] p0460 A81-39239

An acquisition and analysis system for the dynamic testing of air intakes
[ONERA, TP NO. 1981-37] p0460 A81-39240

Aerodynamic characteristics of wings of arbitrary planform
p0461 A81-39267

Aerodynamic design of the Aerospatiale SA 365 N Dauphin 2 helicopter
p0468 A81-40099

U.K. development of a rotor de-icing system
p0469 A81-40103

Aerodynamic design of engine air intakes for improved performance
p0470 A81-40117

The experimental and analytical definition of helicopter modeling effects
[AHS 80-4] p0473 A81-40139

Some experimental study on parachute dynamics by utilizing a deceleration system simulator
p0481 A81-40471

Aerodynamic characteristics of an advanced technology propeller for commuter aircraft
[AIAA PAPER 81-1565] p0507 A81-40948

NASA VCE test bed engine aerodynamic performance characteristics and test results
[AIAA PAPER 81-1594] p0508 A81-40969

Helicopter theory --- Book
p0513 A81-41023

Experimental investigation of a high-aspect-ratio supersonic inlet
[AIAA PAPER 81-1397] p0515 A81-42187

Factors influencing the predicted performance of advanced propeller designs
[AIAA PAPER 81-1564] p0516 A81-42210

Wind tunnel tests of sailwings for Darrieus rotors
p0518 A81-42678

Status of dynamic flight test technology - Model identification for flight simulation
[SAE PAPER 810597] p0521 A81-42755

The effect of proplets and bi-blades on the performance and noise of propellers
[SAE PAPER 810600] p0521 A81-42757

Leading edge high lift devices for agricultural aircraft
[SAE PAPER 810608] p0522 A81-42765

Aerodynamic design data for a cruise-matched high performance single-engine airplane
[SAE PAPER 810625] p0523 A81-42779

Effect of leading-edge vortex flaps on aerodynamic performance of delta wings
p0559 A81-44424

An ABC status report --- Advancing Blade Concept for XH-59A rotors
p0572 A81-46610

Local approximation of a vortex layer by a system of discrete vortices
p0577 A81-46782

The calculation of transonic blade tip flow at helicopter rotors
[DGLR PAPER 81-025] p0608 A81-47554

The calculation of separated flow at helicopter bodies
[DGLR PAPER 81-026] p0606 A81-47555

The half-model technique in the wind tunnel and its employment in the development of the Airbus family
[DGLR PAPER 81-118] p0609 A81-47587

Investigations of vortex formation on wings with cropped leading edges
[DGLR PAPER 81-046] p0610 A81-47601

Application of reduced natural longitudinal stability in the Airbus program
[DGLR PAPER 81-062] p0610 A81-47609

Computational fluid mechanics and its impact on the aircraft aerodynamicist
[DGLR PAPER 81-003] p0611 A81-47621

Vortex bursting on slender delta wings in transonic flow and its influence on missile aerodynamic characteristics
[DGLR PAPER 81-047] p0611 A81-47622

Calculation of the aerodynamic characteristics of a deformable wing, moving near a screen
p0625 A81-49948

Estimation of wing nonlinear aerodynamic characteristics at supersonic speeds
[NASA-TP-1718] p0021 N81-10004

Comparison of Unsteady Pressure Fields Computed and Measured on the ZKP model
[AGARD-R-688] p0033 N81-11019

The turbulent wind and its effect on flight
[UTIAS-REVIEW-44] p0033 N81-11020

Low-speed aerodynamic performance of 50.8-centimeter-diameter noise-suppressing inlets for the Quiet, Clean, Short-haul Experimental Engine (QCSEE) --- Lewis 9- by 15-foot low speed wind tunnel tests
[NASA-TP-1178] p0035 N81-11037

A computer program to calculate the longitudinal aerodynamic characteristics of upper-surface-blown wing-flap configurations
[NASA-CR-3305] p0071 N81-[illegible]

A mathematical model of the CH-53 helicopter
[NASA-TM-81238] p0075 N81-[illegible]

Some new research approaches to aircraft spin studies
[AAAF-NT-80-12] p0082 N81-12152

Application of a method for aerodynamic analysis and design of horizontal axis wind turbines, part 1
[FFA-TN-AU-1499-PT-1] p0086 N81-12633

Rotary balance data for a single engine general aviation design having a high aspect-ratio canard for an angle-of-attack range of 30 deg to 90 deg
[NASA-CR-3170] p0090 N81-13022

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions --- Lewis 8 by 6-foot supersonic wind tunnel tests
[NASA-CR-159818] p0093 N81-13057

Pseudosteady-state analysis of nonlinear aircraft maneuvers
[NASA-TP-1758] p0094 N81-13065

Rotary balance data for a single-engine agricultural airplane configuration for an angle-of-attack range of 8 deg to 90 deg
[NASA-CR-3311] p0125 N81-13923

Effects of nonlinearities on wing store flutter
[MBB-FE-17/S/PUB/27] p0131 N81-13974

Experimental aerodynamic characteristics of two V/STOL fighter/attack aircraft configurations at Mach numbers from 0.4 to 1.4
[NASA-TM-81234] p0140 N81-14981

Curved centerline air intake for a gas turbine engine
[NASA-CASE-LEW-13201-1] p0143 N81-14999

Effect of wing location and strakes on stability and control characteristics of a monoplanar circular missile with low-profile tail fins at supersonic speeds
[NASA-TM-81878] p0186 N81-15978

Discussion of test results in the design of laminar airfoils for competition gliders
[NASA-TM-75402] p0186 N81-15984

The tale of two wings
p0188 N81-16004

A wind tunnel investigation of the aerodynamic characteristics of forward swept wings --- supersonic cruise aircraft research
p0189 N81-16011

Computer code for the determination of ejection seat/man aerodynamic parameters
[AD-A092721] p0191 N81-16026

Turboprop Cargo Aircraft Systems study, phase 1
[NASA-CR-159355] p0193 N81-16041

Acoustic and aerodynamic performance investigation of inverted velocity profile coannular plug nozzles --- variable cycle engines
[NASA-CR-3149] p0203 N81-16054

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 1: Design layouts
[NASA-CR-159819-VOL-1] p0214 N81-17081

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 2: Tabulated aeroynamic data book 1
[NASA-CR-159819-VOL-2-BK-1] p0214 N81-17082

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 2: Tabulated aerodynamic data book 2
[NASA-CR-159819-VOL-2-BK-2] p0214 N81-17083

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 2: Tabulated aerodynamic data book 3
[NASA-CR-159819-VOL-2-BK-3] p0214 N81-17084

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 3: Graphical data book 1
[NASA-CR-159819-VOL-3-BK-1] p0214 N81-17085

Model aerodynamic test results for two variable
cycle engine coannular exhaust systems at
simulated takeoff and cruise conditions.
Comprehensive data report. Volume 3: Graphical
data book 2
[NASA-CR-159819-VOL-3-BK-2] p0214 N81-17086
Evaluation of the acoustic and aerodynamic
characteristics of several slot-baffle
configurations for transonic wind tunnel walls
[AD-A093957] p0217 N81-17106
Overview of the Langley subsonic research effort
on SCR configuration
p0243 N81-17982
Aerodynamic effects of nearly uniform slipstreams
on thin wings in the transonic regime
[NASA-CR-152351] p0249 N81-18027
Data base for the prediction of
airframe/propulsion system interference effects
[NASA-CR-152316] p0251 N81-18045
Experimental study of the separation at the
trailing edge of an axisymmetrical contoured
after-body
p0255 N81-18257
Flow in bent pipes
[CETIM-14-P-091] p0256 N81-18322
The EET Horizontal Tails Investigation and the EET
Lateral Controls Investigation --- Langley
8-Foot Transonic Pressure Tunnel
p0260 N81-19009
Aeropropulsive characteristics of twin
nonaxisymmetric vectoring nozzles installed with
forward-swept and aft-swept wings --- in the
Langley 16 Foot Transonic Tunnel
[NASA-TP-1778] p0261 N81-19019
A theoretical investigation of ground effects on
USB configurations
[NASA-CR-159005] p0262 N81-19021
Effect of wing-transition location and slotted and
unslotted flaps on aerodynamic characteristics
of a fighter model at high subsonic speeds ---
conducted in langley 8-foot transonic pressure
tunnel
[NASA-TM-X-1849] p0262 N81-19024
Wind-tunnel investigation at Mach numbers from
0.25 to 1.01 of a transport configuration
designed to cruise at near-sonic speeds ---
conducted in langley 8-foot transonic pressure
tunnel
[NASA-TM-X-2622] p0262 N81-19025
NASA progress in aircraft noise prediction
p0269 N81-19074
GASP- General Aviation Synthesis Program. Volume
3: Aerodynamics. Part 1: Theoretical
development
[NASA-CR-152303-VOL-3-PT-1] p0270 N81-19090
Analytical study of STOL Aircraft in ground
effect. Part 1: Nonplanar, nonlinear wing/jet
lifting surface method
[NASA-CR-152087-PT-1] p0271 N81-19096
Analytical study of STOL Aircraft in ground
effect. Part 2: Nonplanar, nonlinear method
applicable to three dimensional jets of finite
thickness
[NASA-CR-152088-PT-2] p0271 N81-19097
Development of advanced techniques for rotorcraft
state estimation and parameter identification
[NASA-CR-159297] p0271 N81-19098
First results obtained by the AMD-BA Company from
the rotary assembly of the AMF Lille
[NASA-TM-75887] p0276 N81-19139
Aerodynamic characteristics of a hypersonic cruise
aircraft concept with wing-mounted propulsion
systems at Mach numbers of 2.96, 3.96 and 4.63
--- Langley unitary plan wind tunnel tests
[NASA-TM-81937] p0329 N81-20025
The elaboration of a new family of helicopter
blade profiles
[NASA-TM-75907] p0330 N81-20031
Reasons for low aerodynamic performance of
13.5-centimeter-tip-diameter aircraft engine
starter turbine
[NASA-TP-1810] p0334 N81-20076
Model and boundary aerodynamic data from high
blockage two-dimensional airfoil tests in a
shallow unstreamlined transonic flexible walled
test section --- transonic self-streamlining
wind tunnel
[NASA-CR-165685] p0343 N81-21087
Sea King mathematical model validation trials.
Flight data channel calibration
[AD-A096587] p0374 N81-22043
Analysis of wind tunnel test results for a
9.39-per cent scale model of a VSTOL
fighter/attack aircraft. Volume 1: Study
overview --- aerodynamic characteristics
[NASA-CR-152391-VOL-1] p0384 N81-23030
Analysis of wind tunnel test results for a
9.39-per cent scale model of a VSTOL
fighter/attack aircraft. Volume 2: Evaluation
of prediction methodologies
[NASA-CR-152391-VOL-2] p0384 N81-23031
Analysis of wind tunnel test results for a
9.39-per cent scale model of a VSTOL
fighter/attack aircraft. Volume 3: Effects of
configuration variations from baseline
[NASA-CR-152391-VOL-3] p0384 N81-23032
Analysis of wind tunnel test results for a
9.39-per cent scale model of a VSTOL
fighter/attack aircraft. Volume 4: RALS E104
aerodynamic characteristics and comparisons with
E205 configuration aerodynamic characteristics
[NASA-CR-152391-VOL-4] p0384 N81-23033
Investigation of aerodynamic characteristics of
wings having vortex flow using different
numerical codes
[NASA-CR-165706] p0384 N81-23034
Two-dimensional aerodynamic characteristics of the
NACA 0012 airfoil in the Langley 8 foot
transonic pressure tunnel
[NASA-TM-81927] p0385 N81-23036
Full-scale aerodynamic characteristics of a
propeller installed on a small twin-engine
aircraft wing panel
[NASA-TM-81285] p0385 N81-23039
Aerodynamics, aeroelasticity, and stability of
hang gliders. Experimental results --- Ames 7-
by 10-ft wind tunnel tests
[NASA-TM-81269] p0423 N81-24025
Comparison of selected lift and sideslip
characteristics of the Ayres Thrush S2R-800,
winglets off and winglets on, to full-scale
wind-tunnel data
[NASA-CR-165710] p0423 N81-24026
Surface pressure measurements on a projectile
shape at Mach 0.908
[AD-A098589] p0439 N81-25045
Application of the joined wing to cruise missiles
[AD-A096450] p0441 N81-25068
Aerodynamic analysis of a fighter aircraft with a
higher order paneling method
[AD-A099404] p0483 N81-26082
An introduction to the aerodynamics of spoilers
[PB81-166183] p0487 N81-26122
Noise and performance of propellers for light
aircraft
[NASA-CR-165732] p0491 N81-26845
Prediction of supersonic store separation
characteristics including fuselage and stores of
noncircular cross section. Volume 1:
Theoretical methods and comparisons with
experiment
[AD-A099330] p0495 N81-27081
Prediction of supersonic store separation
characteristics including fuselage and stores of
noncircular cross section. Volume 3:
Appendices A and B. Details of program 1
[AD-A099331] p0495 N81-27082
Prediction of supersonic store separation
characteristics including fuselage and stores of
noncircular cross section. Volume 4:
Appendices C and D. Details of program 2
[AD-A099332] p0495 N81-27083
Unpowered aerodynamic characteristics of a
15-percent scale model of a twin-engine commuter
aircraft
[NASA-TM-81284] p0537 N81-28055
Experimental aerodynamic characteristics of two
V/STOL fighter/attack aircraft configurations at
Mach numbers from 1.6 to 2.0 --- Ames 9 by 7
foot supersonic wind tunnel
[NASA-TM-81286] p0579 N81-30083
Wing-alone aerodynamic characteristics for high
angles of attack of supersonic speeds
[NASA-TP-1889] p0579 N81-30087
High angle of attack missile aerodynamic at Mach
numbers 0.30 to 1.5

Investigation of lateral forces and moments in the
case of asymmetric gas flows in nozzles
p0004 A81-10913
Testing stand for the measurement of nonsteady
aerodynamic forces in the transonic wind tunnel
at Goettingen
p0065 A81-15703
A method for calculating the aerodynamic forces
and moments on external stores of aircraft
p0226 A81-24006
Control design for reduction of aerodynamic tail
forces using quadratic synthesis
p0240 A81-26610
Linear/nonlinear behavior in unsteady transonic
aerodynamics
[AIAA 81-0643] p0306 A81-29496
Unsteady aerodynamic propulsion
[AIAA 81-0645] p0307 A81-29498
On the convergence of unsteady generalized
aerodynamic forces
[AIAA 81-0647] p0307 A81-29500
Aerodynamic modeling of an oscillating wing with
external stores
[AIAA 81-0648] p0307 A81-29501
A new frequency parameter for unsteady aerodynamics
[AIAA 81-0649] p0307 A81-29502
A theoretical treatment of lifting surface theory
of an elliptic wing
p0347 A81-30653
Influence of hinge line gap on aerodynamic forces
acting on a harmonically oscillating thin
profile in an incompressible flow. I, II
p0348 A81-30956
Measurement of the aerodynamic forces acting on a
harmonically oscillating wing at high subsonic
speeds
p0349 A81-31042
A half-model free-oscillation rig for
pitch-damping measurements in high speed wind
tunnels
p0461 A81-39263
The influence of leading-edge thrust on twisted
and cambered wing design for supersonic cruise
[AIAA PAPER 81-1656] p0526 A81-43146
An analytical technique for approximating unsteady
aerodynamics in the time domain
[NASA-TP-1738] p0043 N81-11022
Supercritical airfoil technology program wake
experiments and modeling for fore and aft loaded
compressor cascades
[AD-A091378] p0091 N81-13034
Clear air turbulence: Historical comments
p0136 N81-14562
A system for aerodynamic design and analysis of
supersonic aircraft. Part 1: General
description and theoretical development
[NASA-CR-3351] p0139 N81-14970
Structural tests on space shuttle thermal
protection system constructed with nondensified
and densified LI 900 and LI 2200 tile
[NASA-TM-81903] p0257 N81-18410
Langley Research Center contributions in advancing
active control technology
p0259 N81-19002
Theoretical analysis of an augmentor wing for a
VTOL fighter
[NASA-CR-152254] p0261 N81-19018
An experimental investigation of the effects of
trailing-edge strips on the unsteady aerodynamic
forces on tabs
[AD-A094909] p0263 N81-19028
VTOL in ground effect flows for closely spaced jets
--- to predict pressure and upwash forces on
aircraft structures
[NASA-CR-152321] p0271 N81-19095
Measurements of aerodynamic damping in the MIT
transonic rotor
[NASA-CR-163980] p0274 N81-19122
Prediction of transonic flutter for a
supercritical wing by modified strip analysis
and comparison with experiment
[NASA-TM-83126] p0445 N81-25432
Strake/delta wing interactions at high angles of
attack
[NASA-CR-166183] p0483 N81-26072
Flap-lag-torsional dynamic modelling of rotor
blades in hover and in forward flight, including
the effect of cubic nonlinearities
[NASA-CR-166194] p0486 N81-26116
Flap-lag-torsional dynamics of extensional and
inextensional rotor blades in hover and in
forward flight
[NASA-CR-164475] p0486 N81-26117
Aeroacoustics of a porous plug jet noise suppressor
[NASA-CR-164549] p0500 N81-27086
Statistical review of counting accelerometer data
for Navy and Marine fleet aircraft from 1
January 1962 to 31 December 1980
[AD-A102495] p0596 N81-31187
Transition and conversion trim-maps for the AV-8A
VTOL aircraft
[AD-A102155] p0596 N81-31188
AERODYNAMIC HEAT TRANSFER
Solution of nonautomodeled problems of
boundary-layer theory taking into account
nonstationary conjugate heat exchange and blowing
p0039 A81-10301

Simulation of aeroheating or aerocooling Air Force stores by arrays of impinging jets
[AD-A095464] p0330 N81-20034

AERODYNAMIC HEATING

Tensile stress/strain characterization of non-linear materials
p0348 A81-30915

The use of interactive graphic displays for interpretation of surface design parameters
[NASA-TM-81963] p0561 N81-30110

AERODYNAMIC INTERFERENCE

Wind tunnel wall interference in a test section with ventilated walls
p0015 A81-11673

Lift effect on transonic wind-tunnel blockage
p0066 A81-15883

Separation of laminar boundary layer induced by aerodynamic interference
p0067 A81-15897

A wall interference analysis --- in wind tunnels
p0104 A81-17472

Numerical simulation of wing-fuselage interference
[AIAA PAPER 81-0048] p0158 A81-20564

A cost-effective method for shock-free supercritical wing design
[AIAA PAPER 81-0383] p0166 A81-20796

An improved potential gradient method to calculate airloads on oscillating supersonic interfering surfaces
[AIAA 81-0646] p0307 A81-29499

Calculation of supersonic flow past interfering wings
p0413 A81-36455

Effect of in-flight thrust reverser deployment on tactical aircraft stability and control
[AIAA PAPER 81-1446] p0504 A81-40879

Propeller performance and design as influenced by the installation
[SAE PAPER 810602] p0521 A81-42759

Helicopter airflow and wake characteristics for low speed and hovering flight from rocket interference investigations
p0572 A81-46608

A new approach to weapon separation aerodynamics
[AIAA PAPER 81-1654] p0616 A81-48416

Finite element method study of wing-fuselage-nacelle interactions of a Falcon 20 type aircraft at Mach = 0.75
p0187 N81-15994

Prospects for explciting favourable and minimizing adverse aerodynamic interference in external store installations
p0187 N81-15996

Evaluation of aircraft interference effects on external stores at subsonic and transonic speeds
p0187 N81-15997

Interference aspects of the A310 high speed wing configuration
p0188 N81-16001

Interference effects of concentrated blowing and vortices on a typical fighter configuration
p0188 N81-16009

Experimental study of the interaction between the wing of a subsonic aircraft and a nacelle of a high by-pass ratio engine
p0189 N81-16010

Aerodynamic interaction between a close-coupled canard and a sweptback wing in transonic flow
p0189 N81-16013

Some aerodynamic interference effects that influence the transonic performance of combat aircraft
p0189 N81-16014

Complex configuration analysis at transonic speeds
p0190 N81-16016

Theoretical and Experimental studies of aerodynamic interference effects --- aerodynamic forces on winglets and on wing nacelle configurations for the YC-14 and KC-135 aircraft
p0190 N81-16017

Data base for the prediction of inlet external drag
p0190 N81-16018

Philosophy and results of steady and unsteady test techniques on a large scale transport aircraft model in the ONERA transonic tunnel S1 MA. Part 1: Philosophy and results of steady tests. Part 2: Interest of large models in unsteady aerodynamics
p0190 N81-16019

Prediction of nacelle aerodynamic interference effects at low supersonic Mach numbers
p0244 N81-17988

Civil component program Wing Section. New calculation methods for subsonic and transonic interference with planar and spatial flows
[BMFT-FB-W-80-022] p0424 N81-24034

Sting interference effects on the static dynamic and base pressure measurements of the standard dynamics model aircraft at Mach numbers 0.3 through 1.3
[AD-A102612] p0627 N81-32124

NT GUST LOADS

Two methods for calculating the load on the surface of a slender body executing axisymmetric vibrations in a sonic gas flow
p0004 A81-10920

Structural flight load testing, calibration and analysis
p0013 A81-11656

Procedures to improve flight safety in wind shear conditions
p0014 A81-11666

Experimental study of the influence of supports on the aerodynamic loads on an ogive cylinder at high angles of attack
[AIAA PAPER 81-0007] p0156 A81-20531

Prediction and experimental verification of transient airfoil motion in a small wind tunnel
[AIAA PAPER 81-0052] p0159 A81-20568

On the derivation of universal indicial functions --- for unsteady transonic flow
[AIAA PAPER 81-0328] p0165 A81-20753

Mean rotor wake characteristics of an aerodynamically loaded 0.5 m diameter fan
[AIAA PAPER 81-0208] p0168 A81-20830

Aerodynamic blade excitation in turbocompressors
p0282 A81-27612

Aerodynamic calculation of turbine stator cascades with curvilinear leaned blades and some experimental results
p0293 A81-29072

Use of flight simulators in developing design load spectra for new aircraft
[AIAA 81-0513] p0301 A81-29389

An application of the energy release rate concept to crack growth in attachment lugs
[AIAA 81-0491] p0302 A81-29420

An improved potential gradient method to calculate airloads on oscillating supersonic interfering surfaces
[AIAA 81-0646] p0307 A81-29499

Dynamic stability of a rotor blade using finite element analysis
[AIAA 81-0615] p0309 A81-29513

Effect of time-dependent flight loads on turbofan engine performance deterioration
[ASME PAPER 81-GT-203] p0318 A81-30093

RAPIDLOADS - A preliminary design loads prediction technique for aircraft
[SAWE PAPER 1366] p0353 A81-31308

Aerodynamic load distribution along the span of an asymmetric wing
p0413 A81-35915

Experimental substantiation for hovering rotor vertical impedance calculations
p0453 A81-38015

The Shenandoah flies again - A computer simulation
[AIAA 81-1325] p0456 A81-38534

Crack growth model for flight-type loading
p0460 A81-39247

Stability of nonuniform rotor blades in hover using a mixed formulation
p0467 A81-40088

JT9D performance deterioration results from a simulated aerodynamic load test
[AIAA PAPER 81-1588] p0507 A81-40963

Development of airframe structural design loads prediction techniques for flexible military aircraft - Theoretical development
[AIAA PAPER 81-1696] p0535 A81-43953

Development of airframe structural design loads prediction techniques for flexible military aircraft - Applications
[AIAA PAPER 81-1697] p0535 A81-43954

Evaluation of two-dimensional subsonic oscillatory
  airforce coefficients and loading distributions
  p0617 A81-40480
Stability of nonuniform rotor blades in hover
  using a mixed formulation
  [AD-A090756] p0076 N81-12071
On the use of active higher harmonic blade pitch
  control for helicopter vibration reduction

Mean rotor wake characteristics of an
  aerodynamically loaded 0.5 m diameter fan
  [NASA-TM-81657] p0195 N81-16053
A method for the prediction of wing response to
  nonstationary buffet loads
  [AD-A093037] p0208 N81-17043
Comparison of flight load measurements obtained
  from calibrated strain gages and pressure
  transducers
  [AD-A093750] p0208 N81-17044
The influence of the compressibility in simulating
  the conduct of exterior loads of a carrier
  [MBB-FE-122/S/PUB/17] p0220 N81-17483
Wind loading and response of a high-rise building
  [CONF-810104-1] p0256 N81-18259
Wind loads for bar-truss structures
  p0259 N81-18997
Status and future plans of the Drones for
  Aerodynamic and Structural Testing (DAST) program
  --- Aeroelastic Research Wing (ARW)
  p0259 N81-19003
Calculation of airloads for a flexible wing via
  NASTRAN
  [AD-A094770] p0263 N81-19031
A higher-order trapezoidal vector vortex panel for
  subsonic flow
  [AD-A094775] p0263 N81-19032
Wind tunnel tests to determine the behavior during
  ejection of exterior stores at high and low speeds
  [DLGB-79-096] p0272 N81-19102
Nastran level 16 theoretical manual updates for
  aeroelastic analysis of bladed discs
  [NASA-CR-159823] p0279 N81-19480
Unsteady airloads on a harmonically pitching wing
  with external store
  [NLR-MP-80004-U] p0330 N81-20038
Application of linear quadratic control in
  reduction of aerodynamic forces on aircraft
  p0332 N81-20061
The development of a theoretical and experimental
  model for the study of active suppression of
  wing flutter
  p0376 N81-22058
Some remarks on the unsteady airloads on
  oscillating control surfaces in subsonic flow
  p0386 N81-23055
Comparison of theoretical predictions of orbiter
  airloads with wind tunnel and flight test
  results for a Mach number of 0.52
  [NASA-TM-81358] p0387 N81-23066
Performance deterioration based on simulated
  aerodynamic loads test, JT9D jet engine
  diagnostics program
  [NASA-CR-165297] p0390 N81-23086
Development of a nonlinear vortex method ---
  steady and unsteady aerodynamic loads of highly
  sweptback wings
  [NASA-CR-164351] p0423 N81-24024
Research related to variable sweep aircraft
  development
  [NASA-TM-83121] p0541 N81-29087
An aerodynamic analysis of deformed wings in
  subsonic and supersonic flow
  [AD-A101675] p0580 N81-30091
Investigation of high-angle-of-attack
  maneuver-limiting factors. Part 1: Analysis
  and simulation --- F-4J and F-14A aircraft
  [AD-A101646] p0581 N81-30113
Investigation of high-angle-of-attack
  maneuver-limiting factors. Part 2: Piloted
  simulation assessment of Bihrle departure criteria
  [AD-A101647] p0581 N81-30114
Investigation of high-angle-of-attack
  maneuver-limiting factors. Part 3: Appendices,

  Prediction of flyover jet noise spectra
    [AIAA PAPER 81-2025] p0618 A81-40610
  Contributions to the theory of side edge flap noise
    [AIAA PAPER 81-2036] p0619 A81-40625
  Noise radiated from inverted velocity profile jets
    under simulated flight
    [AIAA PAPER 81-2026] p0623 A81-40729
  Shielding concepts for jet noise
    [AIAA PAPER 81-2020] p0623 A81-40730
  Noise shielding by a hot subsonic jet
    [AIAA PAPER 81-2018] p0624 A81-40731

An improved prediction method for noise generated by conventional profile coaxial jets [AIAA PAPER 81-1991] p0624 A81-49743
Weapon bay cavity noise environments, data correlation and prediction for the B-1 aircraft [AD-A089770] p0045 N81-11778
Exhaust noise in flight: The role of acoustic installation effects [PNR-90029] p0138 N81-14793
Static source locations for four nozzles mounted on a J-85 engine [NASA-CR-152401] p0143 N81-14998
Curved centerline air intake for a gas turbine engine [NASA-CASE-LEW-13201-1] p0143 N81-14999
Flap noise characteristics measured by pressure cross correlation techniques p0259 N81-18808
Aerodynamic and acoustic behavior of a YF-12 inlet at static conditions [NASA-CR-163106] p0342 N81-21079

AERODYNAMIC STABILITY
Investigation of high-manoeuvrability flight vehicle dynamics p0009 A81-11625
Longitudinal motion of low-flying vehicles in nonlinear flowfields p0009 A81-11626
Preliminary consideration of parameter identification analysis from parachute aerodynamic flight test data p0067 A81-16020
The effect of aerodynamic coupling on the dynamics of aircraft in fast rolling motion p0104 A81-17471
Practical aerodynamics of the helicopter Mi-6A --- Russian book p0116 A81-18600
Delta canard configuration at high angle of attack p0154 A81-20351
A new concept for dynamic stability testing --- for aircraft model in orbital path [AIAA PAPER 81-0158] p0161 A81-20638
Curved-flow, rolling-flow, and oscillatory pure-yawing wind-tunnel test methods for determination of dynamic stability derivatives p0241 A81-26933
The influence of gyroscopic forces on the dynamic behavior of rotating blades p0295 A81-29098
The effect of the atmospheric turbulence on the rotor blade flap-leadlag motion stability in hovering [AIAA 81-0610] p0304 A81-29472
Dynamic stability of a rotor blade using finite element analysis [AIAA 81-0615] p0309 A81-29513
A new method of airfoil flutter control p0367 A81-33844
Wind tunnel determination of dynamic cross-coupling derivatives - A new approach p0413 A81-35927
Lateral flutter of loads towed beneath helicopters and its avoidance p0470 A81-40114
On the use of approximate models in helicopter flight mechanics p0471 A81-40122
Parameter identification of a hingeless rotor helicopter in flight conditions with increased instability p0471 A81-40123
Effect of engine noise on aircraft wing laminar boundary-layer stability p0510 A81-41255
Effects of yaw on leading edge vortex flap aerodynamics [AIAA PAPER 81-1660] p0526 A81-43147
Data analysis for aircraft parameter estimates [AIAA PAPER 81-1864] p0560 A81-44561
Stability characteristics of a forward swept wing aircraft at high angles of attack [AIAA PAPER 81-1884] p0561 A81-44576
Prediction of dynamic stall and unsteady airloads for rotor blades p0571 A81-46604
New designs for improved aerodynamic stability on recent Aerospatiale helicopters p0574 A81-46625
Stability and flutter analysis of turbine blades at low speed p0612 A81-47959
An analytical study of landing flare [DFVLR-FB-79-40] p0027 N81-10062
Full scale wind tunnel investigation of a bearingless main helicopter rotor --- Ames 40 by 80 foot wind tunnel test using the BO-105 helicopter [NASA-CR-152373] p0033 N81-11014
Wind tunnel investigation of the aerodynamic hysteresis phenomenon on the F-4 aircraft and its effects on aircraft motion [AD-A089851] p0033 N81-11016
Flight evaluation of stabilization and command augmentation system concepts and cockpit displays during approach and landing of powered-lift STOL aircraft [NASA-TP-1551] p0037 N81-11044
Missile motion sensitivity to dynamic stability derivatives [AD-A089750] p0038 N81-11093
Report on a cooperative programme on Active Flutter Suppression [AGARD-R-689] p0082 N81-12115
Stability of large horizontal-axis axisymmetric wind turbines [NASA-TM-81623] p0085 N81-12446
Dynamics of a helicopter-slung load system p0092 N81-13051
Design of a lateral stability augmentation system for the F106 to improve lateral handling qualities during tracking [AD-A091014] p0094 N81-13067
A contribution to stabilization of flight vehicle parachute systems [DFVLR-MITT-80-05] p0126 N81-13926
Active flutter suppression on an F-4F aircraft with external stores using already existing control surfaces [MBB-FB-17/S/PUB/24] p0131 N81-13972
Aerodynamic stability analysis of NASA J85-13/planar pressure pulse generator installation [NASA-CR-165141] p0143 N81-15004
TF34 engine compression system computer study --- simulation of flow stability [NASA-CR-159889] p0143 N81-15005
Some wake-related operational limitations of rotorcraft [NASA-TM-81920] p0186 N81-15985
Preliminary airworthiness evaluation AH-1S (PROD) helicopter equipped with a substitute straight exhaust pipe [AD-AC92614] p0194 N81-16045
Demonstration of a method for determining critical store configurations for wing store flutter [AD-A092257] p0197 N81-16068
Preliminary airworthiness evaluation OH-58C helicopter configured with a mast mounted sight [AD-A094172] p0252 N81-18052
The phenomenon of dynamic stall --- vortex shedding phenomenon on oscillating airfoils [NASA-TM-81264] p0329 N81-20029
Maximum likelihood identification of aircraft lateral parameters with unsteady aerodynamic modelling p0376 N81-22057
Transonic wind tunnel measurements of tailplane and elevator effectiveness of the Jindivik 203B target aircraft [AD-A098180] p0424 N81-24031
Semi-actuator disk theory for compressor choke flutter [NASA-CR-3426] p0442 N81-25075
Phase 2 and 3 wind tunnel tests of the J-97 powered, external augmentor V/STOL model --- conducted in Ames 40- by 80-foot wind tunnel [NASA-CR-152380] p0483 N81-26076
Validation study of the V/STOL aerodynamics and stability and control manual [AD-A099236] p0486 N81-26119
A study of the effects of store aerodynamic on wing/store flutter p0490 N81-26153
A digital program for calculating the interaction between flexible structures, unsteady aerodynamics and active controls [NASA-TM-80040] p0498 N81-27115

An engineering method for estimating the lateral/directional characteristics of V/STOL configurations in transition [AD-A100386] p0540 N81-28103
AH-1S(Prod) airworthiness and flight characteristics for instrument flight [AD-A100946] p0540 N81-29121
Dynamic Stability Parameters --- conferences [AGARD-LS-114] p0590 N81-31105
Aerodynamic mathematical modeling - basic concepts p0590 N81-31106
Impact of high-alpha aerodynamics on dynamic stability parameters of aircraft and missiles p0590 N81-31107
Review of techniques for determination of dynamic stability parameters in wind tunnels p0590 N81-31108
Direct forced-oscillation techniques for the determination of stability derivatives in wind tunnels p0590 N81-31109
Wind-tunnel measurement of aerodynamic derivatives using flexible-sting rigs p0591 N81-31110
Rotary and Magnus balances p0591 N81-31111
Curved-flow, rolling-flow, and oscillatory pure-yawing wind-tunnel test methods for determination of dynamic stability derivatives p0591 N81-31112
Support interference p0591 N81-31113
Applications of half-model technique in dynamic stability testing p0591 N81-31114
Transition and conversion trim-maps for the AV-8A VTOL aircraft [AD-A102155] p0596 N81-31188
Generalised dynamic stability for linearized yawing motion --- The stability of spinning projectiles [RMCS-80002] p0601 N81-31225
Aeroelastic instability stoppers for wind-tunnel models [NASA-CASE-LAR-12720-1] p0601 N81-31229
Stability and control characteristics of a three-surface advanced fighter configuration at angles of attack up to 45 deg --- conducted in the Langley 16-foot transonic tunnel [NASA-TM-83171] p0635 N81-33159

AERODYNAMIC STALLING
Investigation of the stalling characteristics of a general aviation aircraft p0014 A81-11665
A status report on NASA general aviation stall/spin flight testing p0122 A81-19471
Model vibrations beyond low-speed stall [ONERA, TP NO. 1980-154] p0123 A81-19552
Dynamic pressure response with stall on axial flow compressor rotor blades [AIAA PAPER 81-0069] p0159 A81-20578
Stalling pressure rise capability of axial flow compressor stages [ASME PAPER 81-GT-3] p0310 A81-29928
Supersonic stall flutter of high-speed fans [ASME PAPER 81-GT-184] p0317 A81-30078
Role of laminar separation bubbles in airfoil leading-edge stalls p0354 A81-31613
Fluid mechanics mechanisms in the stall process of airfoils for helicopters p0360 A81-32779
Analysis of stalled airfoils by simultaneous perturbations to viscous and inviscid equations [AIAA PAPER 81-1239] p0454 A81-38096
Analytical techniques for the analysis of stall/spin flight test data [SAE PAPER 810595] p0521 A81-42756
Determination of model structure and parameters of an airplane from pre- and post-stall flight data [AIAA PAPER 81-1866] p0560 A81-44562
An investigation of the impact of aerodynamic lags on dynamic flight characteristics [AIAA PAPER 81-1892] p0561 A81-44581
Prediction of dynamic stall and unsteady airloads for rotor blades p0571 A81-46604
Active elimination of stall conditions --- in helicopters p0571 A81-46603
On the numerical analysis of stall flutter in turbine cascade p0613 A81-47963
An investigation of the dynamic stalling characteristics of rotating axial-flow compressor blades p0093 N81-13054
Corry casing treatment [CUED/A-TURBO/TR-101] p0093 N81-13059
Aerodynamic side-force alleviator means [NASA-CASE-LAR-12326-1] p0139 N81-14960
Supersonic stall flutter of high speed fans --- in turbofan engines [NASA-TM-81613] p0140 N81-14970
Rotative balance of the I.M.F. Lille and associated experimental techniques [NASA-TM-75806] p0276 N81-19137
The phenomenon of dynamic stall --- vortex shedding phenomenon on oscillating airfoils [NASA-TM-81264] p0329 N81-20029
Fluid mechanics mechanisms in the stall process of helicopters [NASA-TM-81956] p0338 N81-21027
Unsteady pressure measurements during stall and buffeting --- wind tunnel tests [ESA-TT-641] p0339 N81-21041
On the role of laminar separation bubbles in airfoil leading edge stalls [NLR-MP-80010-U] p0339 N81-21042
A flight investigation of the ultra-deep-stall descent and spin recovery characteristics of a 1/6 scale radiocontrolled model of the Piper PA38 Tomahawk [NASA-CR-156871] p0343 N81-21088
A Jet-diffuser ejector for a V/STOL fighter [NASA-CR-166161] p0420 N81-24064
High-response measurements of a turbofan engine during nonrecoverable stall [NASA-TM-81759] p0443 N81-25084
Model vibrations below low speed stall p0447 N81-26017
Investigation of aerodynamic stall alleviation on a swept planform wing using leading edge modifications [AD-A101239] p0540 N81-29122
Unsteady airloads on oscillating wings in post-stall condition [DFVLR-FB-81-16] p0594 N81-31158
Two-dimensional dynamic stall as simulated in a varying freestream [NASA-CR-164829] p0629 N81-32154

Resonance of forwards and backwards vibration mode
  of impeller with gyroscopic effect
  [AIAA 81-0524]   p0303 A81-29445
A study of the effect of store aerodynamics of
  wing/store flutter
  [AIAA 81-0604]   p0304 A81-29467
Evaluation of methods for prediction and
  prevention of wing/store flutter
  [AIAA 81-0606]   p0304 A81-29469
Aeroelastic tailoring of a composite winglet for
  KC-135
  [AIAA 81-0607]   p0304 A81-29470
Prediction of transonic flutter for a
  supercritical wing by modified strip analysis
  and comparison with experiment
  [AIAA 81-0609]   p0304 A81-29471
Determining the natural frequency of the
  combinative system of the helicopter rotor and
  elastic fuselage with mechanical impedance
  technique
  [AIAA 81-0613]   p0305 A81-29475
Dynamic analysis of a free-tip rotor
  [AIAA 81-0618]   p0305 A81-29479
Aeroservoelasticity in the time domain --- for
  YF-16 aircraft
  [AIAA 81-0635]   p0306 A81-29489
A new frequency parameter for unsteady aerodynamics
  [AIAA 81-0649]   p0307 A81-29502
A hybrid state vector approach to aeroelastic
  analysis with application to composite lifting
  surfaces
  [AIAA 81-0626]   p0308 A81-29512
Non-linear oscillator models in bluff body
  aeroelasticity
    p0348 A81-30786
A Galerkin type finite element method for
  rotary-wing aeroelasticity in hover and forward
  flight
    p0364 A81-33050
A new method of airfoil flutter control
    p0367 A81-33844
Application of unsteady airfoil theory to rotary
  wings
    p0465 A81-39874
Rotor blade aeroelastic stability and response in
  forward flight
    p0467 A81-40089
Wind tunnel evaluation of aeroelastically
  conformable rotors
  [AHS 80-23]   p0475 A81-40153
Aeroelastic stability analysis of hingeless rotor
  helicopters in forward flight using blade and
  airframe normal modes
  [AHS 80-24]   p0475 A81-40154
An experimental investigation of the effects of
  aeroelastic couplings on aeromechanical
  stability of a hingeless rotor helicopter
  [AHS 80-25]   p0475 A81-40155
A preliminary divergence and flutter evaluation of
  an X-wing aircraft
  [AIAA PAPER 81-1671]   p0534 A81-43945
Development of airframe structural design loads
  prediction techniques for flexible military
  aircraft - Theoretical development
  [AIAA PAPER 81-1696]   p0535 A81-43953
Development of airframe structural design loads
  prediction techniques for flexible military
  aircraft - Applications
  [AIAA PAPER 81-1697]   p0535 A81-43954
An analytical pilot rating method for highly
  elastic aircraft
  [AIAA 81-1772]   p0554 A81-44093
Development and hardware verification of an
  aeroelastically tailored forward swept composite
  wing
    p0557 A81-44355
An investigation of the impact of aerodynamic lags
  on dynamic flight characteristics
  [AIAA PAPER 81-1892]   p0561 A81-44581
Design, analyses, and model tests of an
  aeroelastically tailored lifting surface
  [AIAA PAPER 81-1673]   p0566 A81-43974
Full-scale wind-tunnel test of the aeroelastic
  stability of a bearingless main rotor
    p0573 A81-46820
Automatic damping of vibrations of an airplane
  wing by internal control forces
    p0577 A81-46703
Stability and flutter analysis of turbine blades
  at low speed
    p0612 A81-47939
Computer-aided investigation of turbomachine
  aerodynamics and aeroelasticity
    p0613 A81-47962
Calculation of the aerodynamic characteristics of
  a deformable wing, moving near a screen
    p0625 A81-49948
Full scale wind tunnel investigation of a
  bearingless main helicopter rotor --- Ames 40 by
  80 foot wind tunnel test using the BO-105
  helicopter
  [NASA-CR-152373]   p0033 N81-11014
An analytical technique for approximating unsteady
  aerodynamics in the time domain
  [NASA-TP-1738]   p0043 N81-11422
Optimal design studies on composite wings with
  static and dynamic constraints
  [AAAF-NT-79-29]   p0077 N81-12077
Dynamic response of a forward-swept-wing model at
  angles of attack up to 15 deg at a Mach number
  of 0.8 --- Langley transonic dynamics tunnel tests
  [NASA-TM-81863]   p0085 N81-12448
Aeroelastic optimization with multiple constraints
  [AD-A090775]   p0085 N81-12451
Passive control of wing/store flutter
  [NASA-TM-81865]   p0125 N81-13922
The effects of warhead-induced damage on the
  aeroelastic characteristics of lifting surfaces.
  Volume 1: Aeroelastic effects
  [AD-A091674]   p0129 N81-13955
A method for the prediction of wing response to
  nonstationary buffet loads
  [AD-A093037]   p0208 N81-17043
Application of the finite element method to rotary
  wing aeroelasticity
    p0251 N81-18043
Description of the HiMAT Tailored composite
  structure and laboratory measured vehicle shape
  under load
  [NASA-TM-81354]   p0251 N81-18047
Design for active and passive flutter suppression
  and gust alleviation
    p0253 N81-18063
Status and future plans of the Drones for
  Aerodynamic and Structural Testing (DAST) program
  --- Aeroelastic Research Wing (ARW)
    p0259 N81-19003
Nastran level 16 theoretical manual updates for
  aeroelastic analysis of bladed discs
  [NASA-CR-159823]   p0279 N81-19480

AFTERBODIES
Factors affecting afterbody drag
p0292 A81-28648
Wing-body carryover at supersonic speeds with finite afterbodies
p0354 A81-31622
Experimental study of the separation at the trailing edge of an axisymmetrical contoured after-body
p0365 A81-33281
Comparison of computational and experimental jet effects
[AIAA PAPER 81-1492] p0626 A81-49979
An evaluation of wind tunnel test techniques for aircraft nozzle afterbody testing at transonic Mach numbers
[AD-A091775] p0126 N81-13931
Evaluation of wind tunnel nozzle afterbody test techniques utilizing a modern twin engine fighter geometry at Mach numbers from 0.6 to 1.2 --- YF-17 aircraft
[AD-A091545] p0126 N81-13932
Experimental study of the separation at the trailing edge of an axisymmetrical contoured after-body
p0255 N81-18257
An investigation of drag associated with the upswept rear fuselage of a helicopter
[BU-257] p0330 N81-20043

AFTERBURNERS
U AFTERBURNING

AFTERBURNING
Application of scaling in afterburner test and development
[ASME PAPER 81-GT-194] p0317 A81-30086
Studying the exhaust gas from a post combustion turbojet engine
p0089 N81-12996
Small turbine engine augmentor. Phase 1: Preliminary design studies of afterburner and duct-burner configurations
[AD-A101595] p0583 N81-30131

AGGREGATES
Recycling of Portland Cement Concrete airport pavements: A state-of-the-art study
[AD-A101482] p0584 N81-30181

AGING (MATERIALS)
Aging study of the Caravelle 38
p0061 A81-15119

AGRICULTURAL AIRCRAFT
Advanced materials for agricultural aircraft
[SAE PAPER 800610] p0062 A81-15333
Death and injury in aerial spraying - Pre-crash, crash, and post-crash prevention strategies
p0177 A81-22115
Design requirements of agricultural aircraft
p0202 A81-27880
Vortex drag reduction by diffusing vanes - Design for the 'Thrush' agricultural aircraft
[SAE PAPER 810605] p0521 A81-42762
Effects of wingtip modifications on handling qualities of agricultural aircraft
[SAE PAPER 810606] p0522 A81-42763
Leading edge high lift devices for agricultural aircraft
[SAE PAPER 810608] p0522 A81-42765
Full scale visualization of the wing tip vortices generated by a typical agricultural aircraft
[NASA-CR-159382] p0071 N81-12019

AH-1G HELICOPTER
Prediction of helicopter rotor noise from measured blade surface pressure
p0577 A81-46649
A flight investigation of performance and loads for a helicopter with RC-SC2 main-rotor blade sections
[NASA-TM-81898] p0186 N81-15982
Structural Integrity Recording System (SIR) for U.S. Army AH-1G Helicopters
[AD-A097283] p0393 N81-23438
Analytical testing
[NASA-CR-3429] p0393 N81-23407

AH-64 HELICOPTER
Advanced Attack Helicopter /YAH-64/ - Status report
p0099 A81-16580

A piloted simulation of the backup control system
engagement for the YAH-64
p0576 A81-46646
Application of an in-line contamination monitoring
unit to the AHT-64 Hydraulic Test Stand
[AD-A100696] p0550 N81-29140
AILERONS
Subcritical flutter and oscillatory pressure
testing of a full-scale 727 inboard aileron in a
low-speed wind-tunnel
[AIAA 81-0656] p0308 A81-29508
The EET Horizontal Tails Investigation and the EET
Lateral Controls Investigation --- Langley
8-Foot Transonic Pressure Tunnel
p0260 N81-19009
Pressure distributions for the GA(W)-2 airfoil
with 20% aileron, 25% slotted flap and 30%
Fowler flap
[NASA-CR-2948] p0262 N81-19023
Feasibility study for C-141B reduction of wing
loads by uprigging the ailerons
[AD-A094634] p0272 N81-19105
Advanced composite aileron for L-1011 transport
aircraft, task 1
[NASA-CR-145370] p0277 N81-19232

Strong pressure waves in air-breathing engines
[AIAA PAPER 81-1475] p0505 A81-40895
Fiber-reinforced composites - The future for
aeropropulsion
[AIAA PAPER 81-1713] p0527 A81-43164
Sensor/actuator failure detection and isolation
for airbreathing propulsion systems
p0564 A81-45551
Contribution to the determination of the drag
coefficient for air breathing flight vehicles on
the basis of wind tunnel measurements
[DGLR PAPER 81-036] p0610 A81-47604
Propulsion Controls, 1979 --- air breathing engine
control
[NASA-CP-2137] p0078 N81-12090
AIR CARGO
Carrier system simplifies freight handling - A new
technical concept for Lufthansa's Frankfurt
facility
p0056 A81-14241
The future of airfreight - NASA study looks into
the next century
p0056 A81-14242
Flatbed - The universal transport airplane
[SAWE PAPER 1343] p0353 A81-31382
'Load snubbing' - A solution to the problem of
terrain flying with external cargo
[AHS 80-32] p0476 A81-40162
Determination of cargo container inventories
through logistics simulation --- for air shipment
p0616 A81-48380
Air cargo market outlook and impact via the NASA
CLASS project --- Cargo/Logistics Airlift
Systems Study
[NASA-TM-81886] p0073 N81-12039
Helicopter external cargo sling apex fitting:
Development and testing
[AD-A093515] p0252 N81-18049
AIR CONDITIONING EQUIPMENT
Analysis of the operation of air
turborefrigeration plants and their use for
on-the-ground air-conditioning of aircraft
p0614 A81-48196
An analysis of thermal balance in the cooled cabin
of a Sea King Helicopter
[AD-A097199] p0389 N81-23077
AIR COOLING
The design of blowing-cooled aircraft electrical
machines
p0002 A81-10474
Features improved cooling - Turbine blade redesign
boosts life
p0227 A81-24046
Transpiration air cooled turbine blade - A
technology for future generation aircraft and
industrial gas turbine engines using coal or
coal derived fuels
p0297 A81-29115
Cooling air flow characteristics in gas turbine
components
[ASME PAPER 81-GT-76] p0313 A81-29984
An investigation of a preswirled cooling airflow
to a turbine disc by measuring the air
temperature in the rotating channels
[ASME PAPER 81-GT-132] p0316 A81-30035
Comparative efficiency of penetrating steam and
air cooling of gas turbine blades
p0509 A81-41003
Thermodynamic comparison of the efficiencies of
semiclosed- and open-loop air cooling systems of
gas turbine engines
p0509 A81-41029
Analytical studies on the effects of cooling flows
on light aircraft drag
[SAE PAPER 810577] p0519 A81-42741
An experimental investigation of the aerodynamics
and cooling of a horizontally-opposed air-cooled
aircraft engine installation
[NASA-CR-3405] p0372 N81-22015
Thermal and flow analysis of a convection
air-cooled ceramic coated porous metal concept
for turbine vanes
[NASA-TM-81749] p0376 N81-22056
Internal coating of air-cooled gas turbine blades
[NASA-CR-165337] p0429 N81-24068
The packaging of electronic engine control units
and related subcomponents

Evaluation of Loran-C for enroute navigation and
non-precision approach within the state of Vermont
p0516 A81-42433

CAINS II - An application of standard laser gyro
inertial and computer technology for existing
naval carrier aircraft
p0516 A81-42434

Impact of EFIS on navigation --- Electronic Flight
Instrument System
p0517 A81-42435

Low-frequency radio navigation for the Army's
Mobile Automated Field Instrumentation System
/MAFIS/
p0517 A81-42437

Status report on Position Location Reporting
System /PLRS/
p0517 A81-42440

Doppler aided low accuracy strapdown inertial
navigation system
[AIAA 81-1798] p0555 A81-44101

The selection of air radio navigation system for
the post-1990 period
p0556 A81-44322

Automated celestial position determination
p0557 A81-44324

The application of computers to navigation - New
developments employing microprocessors
p0565 A81-45761

Navigation and landing - The prospects of new
systems
p0566 A81-45766

Origins of inertial navigation
p0567 A81-46276

A fail-operational duplex sensor concept for
flight control systems on the basis of
analytical redundancy
[DGLR PAPER 81-066] p0610 A81-47616

The relation between aircraft fuel reserves and
navigation
p0612 A81-47843

Recommended short-term ATC improvements for
helicopters. Volume 3: Operational description
of experimental LORAN-C flight following (LOFF)
in the Houston area
[AD-A089385] p0024 N81-10030

Passive imagery navigation
[AD-A096245] p0339 N81-21051

Dead reckoner navigation project
p0372 N81-22010

An airborne programmable digital to video
converter interface and operation manual
[AD-A096422] p0446 N81-25691

Tactical navigation system testing
p0544 N81-29066

Flight testing and instrumentation of aircraft
navigation systems
p0544 N81-29067

Systems integration of automatic flight control,
navigational calculations, and visual control
(caravelle alis)
p0544 N81-29068

AIR POLLUTION

The aircraft in the stratosphere --- effects on
ozone layer equilibrium
p0002 A81-10499

Aircraft pollution in the vicinity of airports
[AIAA PAPER 81-0309] p0164 A81-20743

Gas turbine engine emission abatement - Status and
needed advancements
p0237 A81-26015

Aircraft and air pollution
p0288 A81-28698

Environmental aspects of aircraft emissions - A
review and current assessment
p0290 A81-29056

Fuel jettisoning by U.S. Air Force aircraft.
Volume 1: Summary and analysis
[AD-A089010] p0032 N81-10580

Fuel jettisoning by U.S. Air Force aircraft.
Volume 2: Fuel dump listings
[AD-A089076] p0032 N81-10581

USAF Aircraft Engine emission goals, a critical
review
[AD-A090282] p0087 N81-12651

The implications of alternative aviation fuels on
airbase air quality
[AD-A090283] p0087 N81-12652

Studying the exhaust gas from a post combustion
turbojet engine
p0089 N81-12996

Exhaust emissions characteristics and variability
for Pratt and Whitney JT8D-7A gas turbine
engines subjected to major overhaul and repair
[AD-A091011] p0094 N81-13062

The RAPS (Regional Air Pollution Study) helicopter
air pollution measurement program, St. Louis,
Missouri
[PB80-213119] p0096 N81-13555

AIR QUALITY

The influence of aircraft operations on air
quality at airports
p0553 A81-44074

The implications of alternative aviation fuels on
airbase air quality
[AD-A090283] p0087 N81-12652

Impact of aircraft emissions on air quality in the
vicinity of airports. Volume 2: An updated
model assessment of aircraft generated air
pollution at LAX, JFK and ORD
[AD-A091005] p0096 N81-13545

Impact of aircraft emissions on air quality in the vicinity of airports. Volume 1: Recent airport measurement programs, data analyses, and submodel development [AD-A089962] p0201 N81-16628

AIR SAMPLING

Tabulations of ambient ozone data obtained by GASP airliners, March 1975 to December 1977 [NASA-TM-81528] p0096 N81-13568

Analysis of atmospheric ozone levels at commercial airplane cruise altitudes in winter and spring, 1976 - 1977 --- Global Atmospheric Sampling Program [NASA-TP-1807] p0345 N81-21685

CF6-50 engine emissions testing with traverse probe [AD-A102159] p0600 N81-31218

AIR TO AIR MISSILES

Fighter fire control requirements for air battles of the future p0326 A81-30340

Maximum information trajectory for an air to air missile intercept [AD-A101497] p0585 N81-30160

AIR TO AIR REFUELING

KC-10A refueling boom control system p0322 A81-30266

An investigation of safety hazards and reliability problems in aerial refueling stores [AD-A091788] p0127 N81-13938

Optimization of strategic airlift in flight refueling [AD-A101137] p0539 N81-28090

AIR TO AIR ROCKETS

U AIR TO AIR MISSILES

AIR TO SURFACE MISSILES

Flying-qualities criteria for wings-level-turn maneuvering during an air-to-ground weapon delivery task [NASA-TM-81266] p0342 N81-21083

AIR TRAFFIC

Traffic forecasting for the NRIA --- New Riyadh International Airport p0114 A81-18090

Hourly airport activity profiles: 30 Airports by user, 3 airports by user and equipment type, selected days in June, July and August, 1978 [AD-A089450] p0024 N81-10031

Airport activity statistics of certificated route air carriers, calendar year 1979 [AD-A089748] p0034 N81-11023

Airport and airspace delay model description [AD-A090781] p0074 N81-12049

Collision avoidance systems. Citations from the NTIS data base [PB80-815020] p0193 N81-16036

Transport jet aircraft noise abatement in foreign countries: Growth, structure, impact. Volume 1: Europe, July 1980 [NASA-CR-152356] p0220 N81-17623

Transport jet aircraft noise abatement in foreign countries: Growth, structure, impact. Volume 2: Pacific basin, August 1980 [NASA-CR-152357-VOL-2] p0220 N81-17624

Supersonic market and economic analyses p0248 N81-18020

Conflict monitoring analysis of parallel route spacing in the high altitude conus airspace, volume 1 [AD-A094071] p0250 N81-18041

Aircraft operating efficiency on the North Atlantic, a challenge for the 1980's p0267 N81-19060

Evaluation of the visual acquisition range of en-route air traffic from cockpit observations [DFVLR-MITT-80-14] p0332 N81-20058

The FAA plans and programs for the future airport and air traffic control system [AD-A100370] p0537 N81-28077

Upgraded FAA Airfield Capacity Model. Volume 1: Supplemental user's guide [AD-A104154] p0639 N81-33216

Upgraded FAA Airfield Capacity Model. Volume 2: Technical description of revisions [AD-A104155] p0639 N81-33217

AIR TRAFFIC CONTROL

NT RADAR APPROACH CONTROL

The state of German involvement and future possibilities in the development of the DME-based landing system DLS p0051 A81-13311

Specifications for short instrument and precision approach path trajectories p0051 A81-13314

General aviation considerations on bad weather approaches at regional airports p0052 A81-13315

The measurement of the air traffic controller p0053 A81-13415

Evaluation of the potential format and content of a cockpit display of traffic information p0053 A81-13419

Air-traffic police steer a new approach p0061 A81-15167

Improvements required in air traffic control to meet increasing general aviation turbine powered aircraft operations [SAE PAPER 800614] p0062 A81-15335

Aircraft collision avoidance and separation assurance [SAE PAPER 800616] p0062 A81-15336

Discrete Address Beacon System - The obvious alternative [SAE PAPER 800625] p0063 A81-15341

The evolution of operational systems --- approach to National Airspace System automation p0064 A81-15699

The future ATC system as influenced by advanced avionics p0100 A81-16506

Airspace analysis in airport system planning p0111 A81-18052

A study of ASRS reports involving general aviation and weather encounters
[NASA-CR-166212] p0493 N81-27063
CH-53E emergency flotation system design study
[AD-A101640] p0548 N81-29124
Definition of investigative areas for human-factor aspects of aircraft accidents
[AD-A101601] p0580 N81-30102
Carbon/graphite composite material study, appendix A and appendix B
p0585 N81-30190
Improving the crashworthiness of general aviation aircraft by crash injury investigations
[AD-A103316] p0636 N81-33174

AIRCRAFT ANTENNAS
Antenna-to-antenna coupling in aircraft radio

systems
p0057 A81-14280
In-flight calibration of aircraft antenna radiation patterns
p0173 A81-21825
Flight-vehicle antennas /2nd revised and enlarged edition/ --- Russian book
p0281 A81-27534
An extremely lightweight fuselage-integrated phased array for airborne applications
p0348 A81-30779
Experimental method for determining the parameters of onboard microwave-radiometer antennas
p0412 A81-35734
Input impedance of a resonator-slot ring antenna on a spherical layer --- for aircraft
p0420 A81-37433
Antennas-avionics systems relationship
[SAE PAPER 810579] p0519 A81-42742
Airborne antenna pattern calculations
p0532 A81-43708
Volumetric pattern prediction of antennas on aircraft using the geometrical theory of diffraction
[DFVLR-FB-80-01] p0132 N81-14195
Airborne antenna pattern code: User's manual
[AD-A092316] p0201 N81-16357
Stress analysis of aircraft modifications (C-141B Aircraft). Joint Airborne Communications Center/Command Post (JACC/CP) provisions
[AD-A095634] p0334 N81-20072
Airborne antenna pattern calculations
[NASA-CR-164350] p0437 N81-24321
VLF P-static noise reduction in aircraft. Volume 1: Current knowledge
[AD-A098451] p0440 N81-25061
VLF P-static noise reduction in aircraft. Volume 2: Recommended action
[AD-A099130] p0491 N81-26394
Multiple arrested synthetic aperture radar
[AD-A101143] p0551 N81-29317
MLS antenna locations for the deHaviland DASH 7 aircraft
[NASA-TM-83195] p0602 N81-31418
Advanced microstrip antenna development. Volume 1: Technology studies for aircraft phased arrays
[AD-A103837] p0640 N81-33390
Tent shaped phased array
[AD-A103927] p0640 N81-33393

AIRCRAFT APPROACH SPACING
Perception of horizontal aircraft separation on a cockpit display of traffic information
p0053 A81-13420
Aircraft collision avoidance and separation assurance
[SAE PAPER 800616] p0062 A81-15336
Aircraft collision avoidance
[GPO-50-158] p0091 N81-13041
Effect of display size on utilization of traffic situation display for self-spacing task --- transport aircraft
[NASA-TP-1885] p0546 N81-29109
Evaluation of Microwave Landing System (MLS) effect on the delivery performance of a fixed-path metering and spacing system
[NASA-TP-1844] p0546 N81-29111
Proceedings of the Public Workshop on Alternative Separation Concepts: Presentations, Discussions and Recommendations
[AD-A102519] p0596 N81-31183

AIRCRAFT BASES
U MILITARY AIR FACILITIES

AIRCRAFT BRAKES
NT LEADING EDGE SLATS
NT TRAILING-EDGE FLAPS
NT WING FLAPS
Today and the future in aircraft wheel and brake development
p0102 A81-17046
Real-time microprocessor technology applied to automatic braking systems
[SAE PAPER 801194] p0402 A81-34204
Analytic determination of the kinematic and energy parameters of aircraft braking during the landing run
p0409 A81-35008
Braking of an aircraft tyre
p0412 A81-35892
Review of antiskid and brake dynamics research
p0268 N81-19066
Aircraft brake systems testing handbook
[AD-A101516] p0548 N81-29123
Behavior of aircraft antiskid braking systems on dry and wet runway surfaces: Hydromechanically controlled system
[NASA-TP-1877] p0581 N81-30112

AIRCRAFT CABINS
U AIRCRAFT COMPARTMENTS

AIRCRAFT CARRIERS
Planning for and evaluating the potential of a land based aircraft for carrier operations
p0122 A81-19470
VTOL control for shipboard landing in high sea states
p0155 A81-20471
Helicopter-ship qualification testing
p0232 A81-24941
F/A-18A Initial Sea Trials
p0458 A81-38857
Runway and deck temperatures in vertical takeoff/landing operations
[AIAA PAPER 81-1623] p0525 A81-43132
Precision flight path control in carrier landing approach - A case for integrated system design
[AIAA PAPER 81-1710] p0535 A81-43956
Glideslope descent-rate cuing to aid carrier landings
[AD-A092193] p0192 N81-16033
System safety program report MK 1 MOD 0 LSO HUD console system
[AD-A095009] p0269 N81-19080
Influence of friction forces on the motion of VTOL aircraft during landing operations on ships at sea
[NASA-TM-81305] p0579 N81-30080
An experimental investigation of VTOL flying qualities requirements or shipboard landings
[AD-A104137] p0638 N81-33199

AIRCRAFT COMMUNICATION
Air-traffic police steer a new approach
p0061 A81-15167
Automating airborne company communications
p0112 A81-16064
Performance evaluation of an interrogation-reply scheduling technique for a discrete address beacon system --- of radar surveillance and aircraft communication in ATC
p0121 A81-15417
Problems of voice communication in helicopters
p0151 A81-20074
A new technique for tracking sequences of digitized images
p0156 A81-20508
A new technology - Piezoelectric polyvinylidene fluoride communications transducers
p0176 A81-2 099
LPI, short-range communications between aircraft in rendezvous --- Low Probability of Intercept
p0177 A81-22493
Considerations concerning an 'information bustar' for distributing on-board measurement and control information
p0233 A81-25375
A 7.5-GHz microstrip phased array for aircraft-to-satellite communication
p0347 A81-30776
A multiplexed digital voice intercommunications system for military applications
[SAE PAPER 801144] p0398 A81-34173
SINTAC and its position-finding performance
p0409 A81-35021
Avionics system design requirements for the United States Coast Guard HH-65A Dolphin
p0472 A81-40133
Aircraft radio systems --- Book
p0513 A81-41871
A 7.5 GHz microstrip phased array for aircraft-to-satellite communication
p0562 A81-44623
Fiber optic technology for data transmission in the helicopter environment
p0573 A81-46614
Functional testing communication equipment (avionics)
[AD-A092825] p0201 N81-16375
Radar Beacon Transponder (RBX) functional description
[AD-A100665] p0547 N81-25112

Radar Beacon Transponder (RBX) installation and
siting criteria
[AD-A100666] p0547 N81-29113
Impact of low altitude coverage requirements on
air-ground communications
[AD-A101642] p0586 N81-30338
Aural communication in aviation
[AGARD-CP-311] p0603 N81-31449
Voice communication research and evaluation system
p0603 N81-31450
Electronic voice communications improvements for
Army aircraft
p0603 N81-31454
Second language speech comprehension in noise: A
hazard to aviation safety
p0604 N81-31463
An active noise reduction system for aircrew helmets
p0604 N81-31470
A multiplexed digital voice intercommunications
system compatible with future voice conversion
techniques
p0605 N81-31474
Sidetone-level considerations in aircraft
communication systems
p0605 N81-31475

AIRCRAFT COMPARTMENTS
Cabin pressure control systems for general
aviation aircraft
[SAE PAPER 800606] p0061 A81-15329
Flight management systems - Central ingredient of
the 1980's avionics shipset
[SAE PAPER 800626] p0063 A81-15342
The FFCC cockpit of the A310 is practically defined
p0063 A81-15623
An overview of the research conducted in
Aerospatiale on internal noise
p0150 A81-20054
Helicopter internal noise - An overview
p0150 A81-20055
Acoustic radiation from honeycomb sandwich plates
p0151 A81-20070
Ozone contamination in aircraft cabins - Results
from GASP data and analyses
[AIAA PAPER 81-0305] p0164 A81-20740
Empirical method for the prediction of business
executive jet cabin noise levels
p0224 A81-23844
The use of bonded crack-stoppers in pressure cabins
p0233 A81-25378
Attenuation of propeller related vibration and noise
[AIAA 81-0521] p0303 A81-29442
Bulkheads in airships
[AIAA 81-1328] p0456 A81-38536
Strategies for aircraft interior noise reduction
in existing and future propeller aircraft
[SAE PAPER 810560] p0518 A81-42726
Tests on the fire resistance behavior of materials
inside civil aircraft
[SNIAS-801-551-101] p0074 N81-12052
Evaluation of the impact computer program as a
linear design tool for bird resistant aircraft
transparencies
[AD-A091051] p0091 N81-13039
Contaminant increase in aircraft liquid oxygen
converters: Analysis of data
[AD-A090975] p0092 N81-13049
Aviation safety: Interior compartment materials
[GPO-50-388] p0126 N81-13933
Cabin fire simulator lavatory tests
[NASA-CR-160909] p0190 N81-16020
Summary of aviation safety program resumes. Cabin
safety
[AD-A091938] p0192 N81-16027
Development of assembly techniques for fire
resistant aircraft interior panels
[NASA-CR-152119] p0254 N81-18097
Analytical prediction of the interior noise for
cylindrical models of aircraft fuselages for
prescribed exterior noise fields. Phase 1:
Development and validation of preliminary
analytical models
[NASA-CR-159363] p0258 N81-18799
R.A.N. Sea King cabin environment survey. Part 2:
Measurement of temperature and humidty
[AD-A096329] p0341 N81-21065
Aircraft transparency optical quality: New
methods of measurement
[AD-A096183] p0341 N81-21070
Analysis of atmospheric ozone levels at commercial
airplane cruise altitudes in winter and spring,
1976 - 1977 --- Global Atmospheric Sampling
Program
[NASA-TP-1807] p0345 N81-21685
The propeller tip vortex. A possible contributor
to aircraft cabin noise
[NASA-TM-81768] p0380 N81-22838
An analysis of thermal balance in the cooled cabin
of a Sea King Helicopter
[AD-A097199] p0389 N81-23077
Validation of a bird substitute for development
and qualification of aircraft tranparencies
[AD-A097736] p0424 N81-24036
Study of noise reduction characteristics of
multilayered panels and dual pane windows with
Helmholtz resonators
[NASA-CR-164370] p0438 N81-24857
A study of the performance of an Olson type active
noise controller and the possibility of the
reduction of cabin noise
[UTIAS-TN-228] p0552 N81-29924
Emergency cabin lighting installations: An
analysis of ceiling- versus lower cabin-mounted
lighting during evacuation trials --- visibility
[AD-A103191] p0636 N81-33175

AIRCRAFT CONFIGURATIONS
NT DROOPED AIRFOILS
New concepts for design of fully-optimized
configurations for future supersonic aircraft
p0007 A81-11606
Some experiences with numerical optimisation in
aircraft specification and preliminary design
studies
p0007 A81-11609
Application of advanced technology for improving
the integration of engine and airframe for
future transport aircraft
p0058 A81-14389
Qualitative calculations of transonic drag-rise
characteristics using the equivalence rule
p0058 A81-14393
Finite difference computation of the steady
transonic potential flow around airplanes
p0107 A81-17802
Calculation of the lift dependent drag polar of
cambered fighter plane configurations with
deflected maneuver flaps in the subsonic region
by means of a modified procedure according to
Lamar
[DGLR PAPER 80-109] p0120 A81-19395
Drag estimations for stream-line and cylindrical
contour distortions on aircraft fuselages and
train cars
[DGLR PAPER 80-116] p0121 A81-19399
Design requirements of agricultural aircraft
p0282 A81-27880
The next combat aircraft
p0298 A81-29150
Sensitivity of optimum solutions to problem
parameters --- in aircraft design
[AIAA 81-0548] p0301 A81-29399
Shape optimization of plate and shell structures
[AIAA 81-0553] p0302 A81-29403
A study of the effect of store aerodynamics on
wing/store flutter
[AIAA 81-0604] p0304 A81-29467
A hybrid state vector approach to aeroelastic
analysis with application to composite lifting
surfaces
[AIAA 81-0626] p0308 A81-29512
The anatomy of the aeroplane --- Book
p0309 A81-29678
Establishing cruise-engine cycle payoffs for a
supersonic VSTOL aircraft
[ASME PAPER 81-GT-100] p0315 A81-30007
Flatbed - The universal transport airplane
[SAWE PAPER 1343] p0353 A81-31382
Application of an aerodynamic configuration
modeling technique to the design and analysis of
X-Wing aircraft configurations
p0356 A81-32013
Feasibility of forward-swept wing technology for
V/STOL aircraft
[SAE PAPER 801176] p0400 A81-34189
Preliminary aerodynamic characteristics of several
advanced VSTOL fighter/attack aircraft concepts
[SAE PAPER 801178] p0400 A81-34191

The art of single-engine aircraft design [AIAA PAPER 81-0918] p0408 A81-34361

Aerodynamic characteristics of two VSTOL fighter configurations [AIAA PAPER 81-1292] p0454 A81-38119

An optimal-surface-transpiration subsonic panel-method for iterative design of complex aircraft configurations [AIAA PAPER 81-1254] p0458 A81-39012

A survey of heating and turbulent boundary layer characteristics of several hypersonic research aircraft configurations [AIAA PAPER 81-1145] p0459 A81-39134

Westland WG30 p0466 A81-40082

The experimental and analytical definition of helicopter modeling effects [AHS 80-4] p0473 A81-40139

Preliminary evaluation of RSRA data comparing pure helicopter, auxiliary propulsion and compound helicopter flight characteristics --- Rotor Systems Research Aircraft [AHS 80-10] p0473 A81-40143

V/STOL technology requirements for future fighter aircraft [AIAA PAPER 81-1360] p0502 A81-40841

Advanced supersonic transport propulsion and configuration technology improvements [AIAA PAPER 81-1595] p0508 A81-40970

A large executive jet design project p0513 A81-42051

Composite repair concepts for depot level use p0558 A81-44384

Aerodynamic integration of externally mounted engines on a long-range bomber [AIAA PAPER 81-1693] p0563 A81-44899

A new aircraft is born - The CN-235 p0565 A81-45756

Prospects for the employment of dirigibles in the 1980s p0565 A81-45763

An evaluation of advanced rotorcraft configurations for emerging military applications p0572 A81-46611

Computer aided helicopter design p0572 A81-46613

Surface-oriented coordinates for boundary-layer calculations in the case of general configurations [DGLR PAPER 81-014] p0608 A81-47557

Contribution to the determination of the drag coefficient for air breathing flight vehicles on the basis of wind tunnel measurements [DGLR PAPER 81-036] p0610 A81-47604

Bibliography on aerodynamics of airframe/engine integration of high-speed turbine-powered aircraft, volume 1 [NASA-TM-81814] p0035 N81-11032

Component-adaptive grid embedding p0137 N81-14697

Experimental aerodynamic characteristics of two V/STOL fighter/attack aircraft configurations at Mach numbers from 0.4 to 1.4 [NASA-TM-81234] p0140 N81-14981

Computational Fluid Dynamics, volume 2 [VKI-LS-1980-5-VOL-2] p0144 N81-15310

An economic and versatile panel method for aircraft and aircraft/store configurations. An outline of the principal features of the mathematical modeling and numerical implementation of the British Aerospace (Warton) Mk II Panel Method p0144 N81-15311

Jet wing interaction to give improved combat performance p0188 N81-16007

Interference effects of concentrated blowing and vortices on a typical fighter configuration p0188 N81-16009

Complex configuration analysis at transonic speeds p0190 N81-16016

Demonstration of a method for determining critical store configurations for wing store flutter [AD-A092257] p0197 N81-16068

Analytic development of improved supersonic cruise aircraft based on wind tunnel data p0244 N81-17989

La Recherche Aerospatiale, Bimonthly Bulletin no. 1980-2, March - April 1980 [ESA-TT-652] p0255 N81-18244

Wind-tunnel investigation at Mach numbers from 0.25 to 1.01 of a transport configuration designed to cruise at near-sonic speeds --- conducted in langley 8-foot transonic pressure tunnel [NASA-TM-X-2622] p0262 N81-19025

GASP- General Aviation Synthesis Program. Volume 2: Geometry. Part 1: Theoretical development [NASA-CR-152303-VOL-2-PT-1] p0270 N81-19089

Jet-diffuser ejector - Attached nozzle design [NASA-CR-152361] p0278 N81-19412

General aviation airplane fuel economy system model p0372 N81-22011

Analysis of wind tunnel test results for a 9.39-per cent scale model of a VSTOL fighter/attack aircraft. Volume 3: Effects of configuration variations from baseline [NASA-CR-152391-VOL-3] p0384 N81-23032

A look at NASA's Aircraft Energy Efficiency program [PSAD-80-50] p0490 N81-26149

Flow control about an airborne laser turret [AD-A100110] p0537 N81-28060

An engineering method for estimating the lateral/directional characteristics of V/STOL configurations in transition [AD-A100386] p0540 N81-28103

Configuration aerodynamics p0593 N81-31148

Stability and control characteristics of a three-surface advanced fighter configuration at angles of attack up to 45 deg --- conducted in the Langley 16-foot transonic tunnel [NASA-TM-83171] p0635 N81-33159

AFTI/F-16 advanced multimode control system design for task-tailored operations
[AIAA PAPER 81-1707] p0535 A81-43955
Precision flight path control in carrier landing approach - A case for integrated system design
[AIAA PAPER 81-1710] p0535 A81-43956
Guidance and Control Conference, Albuquerque, NM, August 19-21, 1981, Collection of Technical Papers
p0553 A81-44076
The improvement of aircraft specific range by periodic control
[AIAA 81-1748] p0553 A81-44080
Effects of displacement and rate saturation on the control of statically unstable aircraft
[AIAA 81-1752] p0554 A81-44082
A mode decomposition control logic for system performance enhancement
[AIAA 81-1753] p0554 A81-44083
Analysis of aircraft longitudinal handling qualities
[AIAA 81-1771] p0554 A81-44092
An analytical pilot rating method for highly elastic aircraft
[AIAA 81-1772] p0554 A81-44093
Longitudinal equivalent systems analysis of Navy tactical aircraft
[AIAA 81-1775] p0554 A81-44094
Multiobjective insensitive design of airplane control systems with uncertain parameters
[AIAA 81-1818] p0555 A81-44108
Control characteristics of a Buoyant Quad-Rotor Research Aircraft
[AIAA 81-1838] p0555 A81-44122
Modern control synthesis applied to the longitudinal decoupled motion of an aircraft
[AIAA 81-1839] p0555 A81-44123
Closed-loop criteria for assessing longitudinal-axis handling qualities of transports in final approach
[AIAA 81-1773] p0556 A81-44133
Low-order approaches to high-order systems - Problems and promises --- for analysis of aircraft pitch dynamics
[AIAA 81-1774] p0556 A81-44134
Flight test results for the F-8 digital fly-by-wire aircraft control sensor analytic redundancy management technique
[AIAA 81-1796] p0556 A81-44135
Equivalent system analysis of translation rate command systems for hover and low speed flight
[AIAA PAPER 81-1858] p0560 A81-44557
Data analysis for aircraft parameter estimates
[AIAA PAPER 81-1864] p0560 A81-44561
Determination of model structure and parameters of an airplane from pre- and post-stall flight data
[AIAA PAPER 81-1866] p0560 A81-44562
A model-following technique for insensitive aircraft control systems
[AIAA PAPER 81-1867] p0560 A81-44563
Time-constrained maximum-energy turns --- for modern fighter aircraft

[AIAA PAPER 81-1886] p0561 A81-44578

Lateral-directional flying qualities of transport aircraft
[AIAA PAPER 81-1887] p0561 A81-44579

A unifying framework for longitudinal flying qualities criteria
[AIAA PAPER 81-1889] p0561 A81-44580

An investigation of the impact of aerodynamic lags on dynamic flight characteristics
[AIAA PAPER 81-1892] p0561 A81-44581

Practical solutions to the aircraft minimum fuel, fixed-range, fixed time-of-arrival trajectory optimization problem
p0563 A81-45515

Pareto-optimal multi-objective design of airplane control systems
p0563 A81-45518

Optimal multirate flight control design
p0563 A81-45522

Adaptive multivariable model following --- for aircraft control
p0564 A81-45540

SR-71 impressive in high-speed regime
p0565 A81-45747

A unified approach to the optimal design of adaptive and gain scheduled controllers to achieve minimum helicopter rotor vibration
p0573 A81-46619

Inverse problems of guided-flight dynamics - Longitudinal motion
p0577 A81-46749

Active gust- and maneuver load control concepts, taking into account, as example, the Airbus A300. I - Design of a controller in the temporal domain for the alleviation of gust loads and the control of the effectiveness for stochastic gusts
[DGLR PAPER 81-065A] p0608 A81-47552

Active gust- and maneuver load reduction concepts, taking into account, as an example, the Airbus A300. II - Design of a controller for gust and maneuver load reduction in the frequency range
[DGLR PAPER 81-065B] p0608 A81-47553

Estimation of kinetic quantities of flight mechanics with a nonlinear observer
[DGLR PAPER 81-067] p0608 A81-47562

Employment of development simulation for the realization of direct side force control in the case of an attack aircraft
[DGLR PAPER 81-063] p0609 A81-47580

Fly-by-wire Jaguar
p0614 A81-48064

Application of optimal control and estimation to autopilot and autothrottle systems
p0615 A81-48371

Development considerations for real-time aircraft/avionic distributed computer control systems
p0616 A81-48376

The use of direct lift control of an aircraft in a guided landing run
p0624 A81-49928

Parametric synthesis of an automatic system for flight-vehicle stabilization
p0625 A81-49940

Realization of a method of extremal targeting in a problem of aircraft landing control
p0625 A81-49943

System simulation applied to the evaluation of displays for guidance and control
[DFVLR-MITT-79-10] p0028 N81-10064

Propulsion controls
p0079 N81-12095

Should we attempt global (inlet engine airframe) control design?
p0079 N81-12097

Simulation comparison of a decoupled longitudinal control system and a velocity vector control wheel steering system during landings in wind shear
[NASA-TP-1734] p0081 N81-12109

Closed loop control systems: Aircraft. Citations from the NTIS data base
[PB80-813710] p0082 N81-12114

Landing flying qualities evaluation criteria for augmented aircraft
[NASA-CR-163097] p0130 N81-13969

Theoretical investigation of the influence of spoiler dynamics on the handling qualities of an aircraft with direct lift control
[DFVLR-FB-80-07] p0131 N81-13975

The effects of the direction of control loading on a one-dimensional tracking task
[AD-A092459] p0197 N81-16067

Analysis and modeling of information handling tasks in supervisory control of advanced aircraft
[AD-A092906] p0211 N81-17061

Preliminary airworthiness evaluation OH-58C helicopter configured with a mast mounted sight
[AD-A094172] p0252 N81-18052

Ground and flight test experience with a triple redundant digital fly by wire control system --- installed in F-8C aircraft
p0259 N81-19006

A brief analysis and its experiment of the hydraulic-electric loading servosystem --- a force simulator
[NASA-TM-76458] p0276 N81-19132

An analytical study of the longitudinal response of airplanes to positive wind shear
[NASA-TP-1765] p0335 N81-20082

SRDS Technical Program document. Fiscal year 1981. Research and Development approved projects
[AD-A096293] p0339 N81-21050

High frequency drive mechanism for an active controls systems aircraft control surface
p0378 N81-22400

Comparison of selected lift and sideslip characteristics of the Ayres Thrush S2R-800, winglets off and winglets on, to full-scale wind-tunnel data
[NASA-CR-165710] p0423 N81-24026

Velocity vector control system augmented with direct lift control
[NASA-CASE-LAR-12268-1] p0433 N81-24106

Pitch attitude stabilization system utilizing engine pressure ratio feedback signals

A case study in aircraft design: The de Havilland family of STOL commuter aircraft --- Book
p0101 A81-16717

Concorde aerodynamics and associated systems development --- Book
p0101 A81-16718

The Grumman Aerospace and Gulfstream American Gulfstream III case study in aircraft design --- Book
p0101 A81-16720

The Gossamer Condor and Albatross: A case study in aircraft design --- Book
[AV-R-80/540] p0101 A81-16721

Optimum selection of main parameters for the reverse design of a supersonic military aircraft
p0102 A81-17047

Transonic axisymmetric bodies with minimal wave drag
p0102 A81-17048

Application of fracture mechanics in designing lower wing skin of transport aircraft
p0102 A81-17049

Recent selected papers of Northwestern Polytechnical University. Parts 1 & 2 --- Book
p0107 A81-17801

Second order approximation theory of an arbitrary aerofoil in incompressible potential flow
p0108 A81-17803

Aerodynamic calculations and design of subcritical aerofoils
p0108 A81-17804

Structural analysis of fuselages with cutouts by finite element method
p0108 A81-17816

The matrix analysis of wings
p0108 A81-17818

Sukhoi's pivotal interdictor
p0109 A81-17832

Avionics and displays in a future airspace system
p0112 A81-18070

A summary of proposals for airflight research by the DRPT
p0118 A81-19298

Stress measurements on landing gear for the Airbus A-300 B2
p0119 A81-19299

Design to cost and new technologies
p0120 A81-19387

Procedures for optimal drag design of camber and flap deflection in supersonic regions with consideration to geometric limits
[DGLR PAPER 80-110] p0120 A81-19396

Circulation Control Wing /CCW/ flight tests
p0122 A81-19489

Industry proposes supersonic V/STOL
p0122 A81-19490

Fighters for the 1990s
p0122 A81-19497

Adaptive airfoils and wings for efficient transonic flight
p0153 A81-20389

A frequency-domain technique for aeroelastic mode estimation
p0156 A81-20475

Numerical optimization of circulation control airfoils
[AIAA PAPER 81-0016] p0157 A81-20540

Experimental development of an advanced circulation control wing system for Navy STOL aircraft

[AIAA PAPER 81-0151] p0161 A81-20632

AV-8B composite fuselage design [AIAA PAPER 81-0232] p0162 A81-20690

Structural weight comparison of a joined wing and a conventional wing [AIAA PAPER 81-0366] p0166 A81-20785

A computer graphics display technique for the examination of aircraft design data [AIAA PAPER 81-0370] p0166 A81-20788

A computer-aided design system geared toward conceptual design in a research environment --- for hypersonic vehicles [AIAA PAPER 81-0372] p0166 A81-20789

Effect of rear stagnation point position and trailing edge bluntness on airfoil characteristics p0170 A81-21013

Developments at VFW/Rhein-Flugzeugbau GmbH, Moenchengladbach --- trainer aircraft design p0171 A81-21574

Flight companies present new aircraft - Boeing 737-200 advanced --- aircraft characteristics and airline selection procedures p0171 A81-21575

Computer analysis of bird-resistant aircraft transparencies p0175 A81-22087

High 'Q' ejection protection device p0175 A81-22093

Escape from military fighters - A modern perspective p0176 A81-22096

Extension of ejection seat capability for high speed conditions p0176 A81-22097

Project and experimental fatigue test of the wing of a modern combat aircraft p0180 A81-22625

Composite fuselage development for Naval aircraft p0181 A81-22648

Critical field length calculations for preliminary design p0183 A81-23366

An approximate analytical method for vortex-lift and centre of pressure on the slender wing p0223 A81-23726

The distributed parameter system theory of the autopilot design of the slender vehicle p0224 A81-23835

Israel Annual Conference on Aviation and Astronautics, 21st, Tel Aviv and Haifa, Israel, February 28-March 1, 1979, Proceedings p0226 A81-24003

Modification of wing sections to optimize transonic performance p0226 A81-24011

Design for supercommuters p0227 A81-24048

Mission Adaptive Wing research programme p0227 A81-24057

Active controls for civil aircraft p0228 A81-24070

Cygnet - A canard configuration powered ultralight aircraft p0231 A81-24746

The Coronel Transverse Wing Flight system p0231 A81-24748

Nederlandse Vereniging voor Luchtvaarttechniek, Yearbook 1979 p0232 A81-24938

Landing gear shock absorber design criteria and the assessment of tire/wheel configurations p0232 A81-24940

The Aerospace Vehicle Interactive Design system [AIAA PAPER 81-0233] p0234 A81-25475

Wing analysis by the plate analogy using an integral-difference method p0235 A81-25680

Parametric analysis of multipurpose airplanes based on utilization effectiveness criteria p0236 A81-25691

Design considerations of advanced supercritical low drag suction airfoils p0240 A81-26514

Control design for reduction of aerodynamic tail forces using quadratic synthesis p0240 A81-26610

F-16 improvement program - Making the digits count p0241 A81-26931

Design requirements of agricultural aircraft p0282 A81-27880

Back to basics - The philosophy adopted for the flight testing of the Panavia Tornado avionics system in hack aircraft p0282 A81-27881

Developments in aircraft power flying control hydraulics p0282 A81-27882

A pursuit of the aerial carriage /25th Henson and Stringfellow Memorial Lecture/ p0284 A81-27901

Combat aircraft development - Looking backward to look forward 1935-1990 p0284 A81-27905

Airbus Industrie - Past, present and future /26th Mitchell Memorial Lecture/ p0284 A81-27907

New directions in cockpit alerting p0286 A81-28298

Boeing 757 and 767 Flight Management System p0286 A81-28299

Building the Gossamer Albatross p0286 A81-28461

Supersonic V/STOL prospects brighten p0288 A81-28599

Technology pays off on the AV-8B p0291 A81-29060

A look at comprehensive engine/airframe integration for high performance aircraft p0298 A81-29118

A method for obtaining shockless transonic flows past two-dimensional airfoils whose profiles are partially modified from a given arbitrary profile p0298 A81-29201

Calculation of the aerodynamic characteristics of aircraft with jet mechanization p0299 A81-29301

Use of flight simulators in developing design load spectra for new aircraft [AIAA 81-0513] p0301 A81-29389

Sensitivity of optimum solutions to problem parameters --- in aircraft design [AIAA 81-0548] p0301 A81-29399

The controlled growth method - A tool for structural optimization [AIAA 81-0549] p0301 A81-29400

Optimality criterion techniques applied to frames having nonlinear cross-sectional properties [AIAA 81-0552] p0301 A81-29402

Shape optimization of plate and shell structures [AIAA 81-0553] p0302 A81-29403

Manufacturing cost/design guide /MC/DG/ for metallic and composite structures [AIAA 81-0518] p0302 A81-29424

The stretched C-14 - Cost effective application of structural technology [AIAA 81-0514] p0302 A81-29427

Response of stiffened sandwich panels [AIAA 81-0557] p0303 A81-29455

Aeroelastic tailoring of a composite winglet for KC-135 [AIAA 81-0607] p0304 A81-29470

The anatomy of the aeroplane --- Book p0309 A81-29678

An operational tilt-rotor this decade p0309 A81-29774

Engine cycle selection for advanced technology engine studies [ASME PAPER 81-GT-191] p0317 A81-30084

On the design of modern airfoil sections by numerical methods p0347 A81-30705

A computer code for the calculation of aircraft trailing vortices p0347 A81-30710

The 'light-weight' system - A novel concept for on-board weight and balance measurement using fiber optics [SAWE PAPER 1336] p0352 A81-31377

Operational responses to aft empty C.G. --- Center of Gravity location in Boeing 727-200 aircraft [SAWE PAPER 1338] p0352 A81-31378

Test procedures used in determining aircraft suitability for STAN integral weight and balance system [SAWE PAPER 1339] p0352 A81-31379

Design considerations for future turboprop transports [SAWE PAPER 1340] p0352 A81-31380

An Interactive Weight Accounting Program /IWAP/
[SAWE PAPER 1345] p0353 A81-31383
Computer aided technology interface with weights engineering --- aircraft design
[SAWE PAPER 1346] p0353 A81-31384
Weights information systems using minicomputers
[SAWE PAPER 1347] p0353 A81-31385
The Modular Life Cycle Cost Model for advanced aircraft systems - An overview
[SAWE PAPER 1351] p0353 A81-31386
The structural weight fraction - Revisited for fighter/attack type aircraft
[SAWE PAPER 1365] p0353 A81-31387
RAPIDLOADS - A preliminary design loads prediction technique for aircraft
[SAWE PAPER 1366] p0353 A81-31388
PARAM - A new weight sizing routine --- cost-effective computerized design for aircraft
[SAWE PAPER 1367] p0353 A81-31389
Design, fabrication, calibration, application, and testing of advanced aircraft weighing systems
[SAWE PAPER 1383] p0353 A81-31399
V/STOL advanced technology rewards and risk --- aircraft design
[SAWE PAPER 1385] p0354 A81-31401
A design analysis technique for evaluating size and weight of V/STOL lift fans
[SAWE PAPER 1386] p0354 A81-31402
Airships - Transport of the future
p0355 A81-31699
Principles of aircraft structural design /2nd revised and enlarged edition/ --- Russian book
p0355 A81-31800
Aircraft assembly --- Russian book
p0355 A81-31872
Past and future trends in structures and dynamics --- of aircraft
[AIAA PAPER 81-0896] p0362 A81-32921
Design of low powered aircraft, a philosophy for future personal sport aircraft
[AIAA PAPER 81-0905] p0362 A81-32926
Jet aircraft design
[AIAA PAPER 81-0912] p0362 A81-32930

AIRCRAFT DESIGN CONTD

Design for safety --- Book
p0455 A81-38499

Coast Guard airship development
[AIAA 81-1311] p0455 A81-38528
Twin-rotor patrol airship flying model
[AIAA 81-1312] p0456 A81-38529
LTA developments in Great Britain
[AIAA 81-1321] p0456 A81-38532
Design and development of a thermal airship
[AIAA 81-1330] p0456 A81-38537
Low cost start-up for rigid-pressure airship
[AIAA 81-1337] p0457 A81-38541
The new utility - Commuter-technology in the sky
p0457 A81-38801

Advanced production methods for the Dornier 228
p0457 A81-38802

Experimental-programme - Transonic wing-TST
p0457 A81-38804

New structural technologies for future fighters
p0458 A81-38805

An optimal-surface-transpiration subsonic
panel-method for iterative design of complex
aircraft configurations
[AIAA PAPER 81-1254] p0458 A81-39012
Contribution of technological progress to energy
savings and conservation to the design of new
aircraft
p0464 A81-39695

ATR 42 - A regional transport aircraft designed to
save energy
p0464 A81-39696

Development of a comprehensive analysis for
rotorcraft. I - Rotor model and wake analysis
p0465 A81-39896

V/STOL combat aircraft progress from the
powerplant viewpoint
p0469 A81-40105

X-wing stability and control development and wind
tunnel demonstration tests - Helicopter,
conversion, and fixed wing flight
[AHS 80-27] p0475 A81-40157
The evolution of a strategic bomber
[AIAA PAPER 81-0919] p0479 A81-40324
The optimum design of non-moment laminated
composite plate - According to static failure
strength condition
p0480 A81-40449

Boeing plays safe --- Boeing 737-300 design
p0480 A81-40455

The ATR 42 - Progress report on a new aircraft
p0480 A81-40456

Propfan progress
p0480 A81-40459

The survivable, affordable fighter - The
Aeritalia-Macchi-Embraer AM-X
p0480 A81-40460

Design and concepts of composite structures
p0481 A81-40503

V/STOL technology requirements for future fighter
aircraft
[AIAA PAPER 81-1360] p0502 A81-40841
Advanced nozzle integration for supersonic strike
fighter application
[AIAA PAPER 81-1441] p0504 A81-40875
Combat survivability with advanced aircraft
propulsion development
[AIAA PAPER 81-1506] p0507 A81-40913
Some propeller developments in the United Kingdom
[AIAA PAPER 81-1566] p0507 A81-40949
Evolution of transport wings - From C-130, C-141,
and C-5 to C-XX
p0510 A81-41333

Improving the economy of subsonic transport
aircraft by means of aerodynamic approaches
p0510 A81-41336

A large executive jet design project
p0513 A81-42051

New roles for the F-15 eagle
p0518 A81-42629

AMX - Italo-Brazilian bantam battler
p0518 A81-42630

Transonic wing design using potential-flow codes -
Successes and failures
[SAE PAPER 810565] p0518 A81-42730
Airfoils for light transport aircraft
[SAE PAPER 810576] p0519 A81-42740
Analytical studies on the effects of cooling flows
on light aircraft drag
[SAE PAPER 810577] p0519 A81-42741
AFCS integration requirements --- Automatic Flight
Control System
[SAE PAPER 810580] p0519 A81-42743
General aviation propeller noise reduction -
Penalties and potential
[SAE PAPER 810585] p0520 A81-42746
Vortex drag reduction by diffusing vanes - Design
for the 'Thrush' agricultural aircraft
[SAE PAPER 810605] p0521 A81-42762
Leading edge high lift devices for agricultural
aircraft
[SAE PAPER 810608] p0522 A81-42765
Crashworthy design concepts for airframe
structures of light aircraft
[SAE PAPER 810613] p0522 A81-42769
Aerodynamic design data for a cruise-matched high
performance single-engine airplane
[SAE PAPER 810625] p0523 A81-42779
Summary of high-lift and control surface research
on NASA general aviation airfoils
[SAE PAPER 810629] p0524 A81-42781
An assessment of advanced technologies for
application to general aviation
[SAE PAPER 810630] p0524 A81-42782
Fibre reinforced composite applications at De
Havilland
[SAE PAPER 810640] p0524 A81-42784
Design concepts for minimizing hot-gas ingestion
in V/STOL aircraft
[AIAA PAPER 81-1624] p0525 A81-43133
Finite element analysis of a bird-resistant
monolithic stretched acrylic canopy design for
the F-16A aircraft
[AIAA PAPER 81-1640] p0525 A81-43140
Propulsion system installation design for
high-speed prop-fans
[AIAA PAPER 81-1649] p0526 A81-43144
The influence of leading-edge thrust on twisted
and cambered wing design for supersonic cruise
[AIAA PAPER 81-1656] p0526 A81-43146
LQG controls for highly maneuverable aircraft ---
Linear quadratic Gaussian
[AIAA PAPER 81-1709] p0527 A81-43163
Industrial leadership of an aircraft design class
[AIAA PAPER 81-1723] p0528 A81-43166
The turboprop aircraft role in the 1980s
[AIAA PAPER 81-1730] p0528 A81-43169
On making things the best - Aeronautical uses of
optimization /Wright Bros. lecture/
[AIAA PAPER 81-1738] p0528 A81-43175
Modelling of gusts and wind shear for aircraft
assessment and certification
p0528 A81-43376

NASA service experience with composite components
--- for aircraft structures
p0529 A81-43607

Commercial composite component service experience
--- in airplane structural design and
manufacturing
p0530 A81-43616

Composite Wing/Fuselage Program
p0530 A81-43629

From paleoaeronautics to altostratus - A technical
history of soaring
[AIAA PAPER 81-1611] p0533 A81-43933
Historical trend in the research and development
of aircraft
[AIAA PAPER 81-1613] p0533 A81-43934
Axisymmetric approach and landing thrust reversers
[AIAA PAPER 81-1650] p0533 A81-43936
Some recent applications of high-lift
computational methods at Boeing
[AIAA PAPER 81-1657] p0534 A81-43940
Experimental and analytical development of an
advanced supersonic fighter concept
[AIAA PAPER 81-1659] p0534 A81-43941
Lift-enhancing surfaces on several advanced V/STOL
fighter/attack aircraft concepts
[AIAA PAPER 81-1675] p0534 A81-43946
Development of airframe structural design loads
prediction techniques for flexible military
aircraft - Theoretical development
[AIAA PAPER 81-1696] p0535 A81-43953
Development of airframe structural design loads
prediction techniques for flexible military
aircraft - Applications
[AIAA PAPER 81-1697] p0535 A81-43954
Boeing 767 - The new fuel saver
p0553 A81-44042

Control characteristics of a Buoyant Quad-Rotor Research Aircraft
[AIAA 81-1830] p0555 A81-44122
Flying qualities criteria and flight control design
[AIAA 81-1823] p0556 A81-44127
Development and hardware verification of an aeroelastically tailored forward swept composite wing
p0557 A81-44355
Utilization in industry of ICAM 'Manufacturing Cost/Design Guide' /MC/DG/ for metallic structures
p0558 A81-44374
Pressure fluctuations on the surface of a small passenger aircraft. I - Periodic disturbances caused by the rotation of the propeller
p0561 A81-44615
Pressure fluctuations on the surface of a small passenger aircraft. II - The effect of the turbulent boundary layer
p0562 A81-44618
Aeronautical engineering - A historical perspective
p0562 A81-44849
Project Bandit - An economical, high performance business aircraft for the 1990s
p0563 A81-44850
Numerical and classical analysis of V/STOL aircraft using selected propulsion systems

An airspeed vector sensor for V/STOL aircraft
[AIAA 80-1938] p0052 A81-13364
The FFCC cockpit of the A310 is practically defined
p0063 A81-15623
Integrated flight displays
p0064 A81-15681
Rate-field displays --- cockpit devices
p0064 A81-15682
Display-control synthesis --- computer flight graphics for aircraft applications
p0064 A81-15684
A new system for the study of visual information presentation in aeronautics - GIBI
p0100 A81-16688
Radio navigation for aircraft: Handbook --- Russian book
p0116 A81-18599
Disturbance estimation for a STOL transport during landing
[AIAA PAPER 81-0018] p0158 A81-20542
Application of CRT displays to new generation aircraft
p0206 A81-28297
Aircraft radar equipment and its operation --- Russian book
p0289 A81-28759
A millimeter wave radar for U.S. Army helicopters in the 80's
p0323 A81-30302
The reconstruction/refiltering approach to Kalman filter evaluation --- in long-range aircraft avionics
p0326 A81-30339
F/A-18 Hornet Crew Station
p0327 A81-30355
The behavior of quartz oscillators in the presence of accelerations --- in missile and aircraft time-frequency navigation systems
[ONERA, TP NO. 1981-31] p0351 A81-31285
Development and testing of a new technology weight and balance indicator
[SAWE PAPER 1341] p0353 A81-31381
Measurement of aircraft speed and altitude --- Book
p0357 A81-32401
Orientation of measurement sensors for optimum end-of-life performance
p0360 A81-32697
Application of CRT displays to the cockpit of tomorrow
[SAE PAPER 801168] p0399 A81-34103
Integrated cockpit information system with color display equipment
p0450 A81-37643
Dynamically tunable, dry gyroscope in aeronautics and astronautics
p0452 A81-37655
Contribution of the DFVLR to the DAS program
p0452 A81-37657
A correlated random numbers generator and its use to estimate false alarm rates of airplane sensor failure detection algorithms
p0453 A81-37822
Boeing plays safe --- Boeing 737-300 design
p0480 A81-40455
The survivable, affordable fighter - The Aeritalia-Macchi-Embraer AM-X
p0480 A81-40460
Aircraft instruments - Principles and applications /2nd edition/ --- Book
p0513 A81-41799
Binocular Camera for cockpit visibility of general aviation aircraft
[SAE PAPER 810628] p0524 A81-42780
Measurement of natural aircraft icing conditions
[AIAA PAPER 81-1646] p0526 A81-43143
Boeing 767 - The new fuel saver
p0553 A81-44042
Investigation of control, display, and crew-loading requirements for helicopter instrument approach
[AIAA 81-1820] p0555 A81-44110
New visual displays for the next generation of civil aircraft
p0556 A81-44299
Aircraft instruments and measuring systems --- Russian book
p0564 A81-45608
Precision DME for microwave landing system
p0578 A81-47125
Instrumentation for measurement of flow properties on a swept wing in flight
[DGLR PAPER 81-034] p0609 A81-47585
Onboard procedure for the measurement of wind shear gradients
[DGLR PAPER 81-060] p0610 A81-47612
Civil head-up displays - Coming up fast
p0625 A81-49973
Simulator study of conventional general aviation instrument displays in path-following tasks with emphasis on pilot-induced oscillations
[NASA-TP-1776] p0142 N81-14997
Environmental burn-in effectiveness
[AD-A093307] p0211 N81-17060
Integration of sensors with displays
p0212 N81-17067
Cathode ray tubes and plasma panels as display devices for aircraft displays
p0212 N81-17069
Evolution of tactical and map displays for high performance aircraft
p0212 N81-17072
Display concepts for control configured vehicles
p0213 N81-17076
Summary of flight tests of an airborne lighting locator system and comparison with ground-based measurements of precipitation and turbulence
p0266 N81-19048
The 1979 clear air turbulence flight test program --- warning and detection devices
p0266 N81-19050
Flight tests of a clear-air turbulence alerting system --- infrared radiometers
p0266 N81-19052
Clear air turbulence studies with microwave radiometers
p0266 N81-19053
Testing aircraft instruments
[AD-A095680] p0334 N81-20075
Minimum operational performance standards for airborne radar approach and beacon systems for helicopters
[RTCA/DO-172] p0336 N81-20322
Minimum operational performance standards for airborne weather and ground mapping pulsed radars
[RTCA/DO-173] p0336 N81-20323
Laser Doppler airspeed and altitude sensor
[AD-A096980] p0375 N81-22049
Contributions to the 9th Symposium on aircraft integrated data systems --- Conferences
[ESA-TT-532] p0382 N81-23008
Flight evaluation of a simple total energy-rate system with potential wind-shear application
[NASA-TP-1854] p0427 N81-24058
High contrast CRT module
[AD-A097727] p0437 N81-24360
Rapid alignment of aircraft strapdown inertial navigation systems using Navstar Global Positioning System (GPS)
p0485 N81-26107
Flight testing and instrumentation of aircraft navigation systems
p0544 N81-29067
Systems integration of automatic flight control, navigational calculations, and visual control (caravelle alis)
p0544 N81-29068
Programmable multipurpose flight test instrumentation system
p0545 N81-29085
Aircraft sensor quality in SESAME 1979: Results of tower fly-bys and aircraft intercomparison
[PB81-176596] p0552 N81-29722
Simulator evaluation of separation of display parameters in path-following tasks
[NASA-TP-1915] p0638 N81-33203
AIRCRAFT LANDING
NT CRASH LANDING
NT DITCHING (LANDING)

F/A-18's landing, launch and recovery system
p0005 A81-11244

Optimizing the fixed leading edge shape of a transonic wing to suit the landing high-lift requirements
p0011 A81-11640

Visual cue augmentation in contact flight simulation
p0064 A81-15696

Research on mechanical flight problems in aircraft parachute systems
p0065 A81-15706

Micro-wave landing system - An operational point of view
p0111 A81-18055

Flight instrumentation requirements for all-weather approach and landing
p0111 A81-18059

Experimental investigation of orographic waves and vertical motions in the Krasnovodsk airport area
p0121 A81-19441

Runway surface loading during aircraft landings
p0149 A81-19800

Some aspects of advanced flight management systems and their application to modern transport aircraft
p0154 A81-20353

VTOL control for shipboard landing in high sea states
p0155 A81-20471

Disturbance estimation for a STOL transport during landing
[AIAA PAPER 81-0018] p0158 A81-20542

A head-up display for low-visibility approach and landing
[AIAA PAPER 81-0130] p0161 A81-20623

New definition of areas of protection for instrument landing
p0225 A81-23869

Landings according to CAT II
p0230 A81-24523

Helicopter-ship qualification testing
p0232 A81-24941

Concepts and state of the art of the precision DME of the microwave landing system
p0233 A81-25376

An observational experiment using a monostatic sodar at the airport of Fiumicino
p0282 A81-27548

Progress in the use of automatic flight controls in safety critical applications
p0284 A81-27902

Airport capacity enhancement by innovative use of runway geometry
[AIAA PAPER 81-0801] p0368 A81-33891

Analytic determination of the kinematic and energy parameters of aircraft braking during the landing run
p0409 A81-35008

Hydroplaning and coefficient of friction in wet runway testing
p0419 A81-37300

An investigation of the recovery from an engine failure in a twin engine augmentor wing aircraft using the NAE Airborne Simulator
p0509 A81-41199

Analysis of helicopter operations and the use of MLS in the offshore environment
p0512 A81-41764

Axisymmetric approach and landing thrust reversers
[AIAA PAPER 81-1650] p0533 A81-43936

Precision flight path control in carrier landing approach - A case for integrated system design
[AIAA PAPER 81-1710] p0535 A81-43956

Fuel optimal aircraft trajectories with fixed arrival times
[AIAA 81-1789] p0554 A81-44081

The influence of structural parameters and velocity on the shimmy of self-aligned wheels
p0556 A81-44268

Aerial collisions with relief features
p0557 A81-44323

Automatic helical rotorcraft descent and landing using a Microwave Landing System
[AIAA PAPER 81-1657] p0560 A81-44556

An aircraft landing system employing observers
p0562 A81-44699

Navigation and landing - The prospects of new systems
p0566 A81-45766

Influence of landing gear flexibility on aircraft performance during ground roll
p0622 A81-48375

The use of direct lift control of an aircraft in a guided landing run
p0624 A81-49920

Realization of a method of extremal targeting in a problem of aircraft landing control
p0625 A81-49962

An analytical study of landing flare
[DFVLR-FB-79-40] p0027 N81-10062

Airport activity statistics of certificated route air carriers, calendar year 1979
[AD-A089740] p0030 N81-11023

Aircraft towing feasibility study
[DOE/CS-50069/1] p0074 N81-12051

Pilatus porter: Provision of revised take-off and landing performance data
[AD-A089964] p0076 N81-12060

Status of improved autorotative landing capability research
[AD-A090031] p0076 N81-12072

Investigation of landing flare in the presence of wind shear
[ESA-TT-631] p0077 N81-12080

Simulation comparison of a decoupled longitudinal control system and a velocity vector control wheel steering system during landings in wind shear
[NASA-TP-1734] p0081 N81-12109

Remote sensing methods for the determination of slant range visibility
[ESA-TT-627] p0086 N81-12536

Flight evaluation of the terminal guidance system
[NASA-CR-163859] p0142 N81-14891

Advanced supersonic transport fixed-base simulator evaluations at landing approach
p0244 N81-17992

Development of SCR Aircraft takeoff and landing procedures for community noise abatement and their impact on flight safety
p0245 N81-17994

A method for determining landing runway length for a STOL aircraft
p0264 N81-19041

A head-up display format for transport aircraft approach and landing
p0265 N81-19043

An evaluation of head-up displays in civil transport operations
p0265 N81-19044

Studies of some unconventional systems for solving various landing problems --- air cushion landing system
p0268 N81-19067

Flight-test evaluation of STOL control and flight director concepts in a powered-lift aircraft flying curved decelerating approaches
[NASA-TP-1641] p0275 N81-19131

Recent progress towards predicting aircraft ground handling performance
[NASA-TM-81952] p0339 N81-21084

Calibration of an axial fan at various power settings for use on a quarter scale XC-8A air cushion model
[AD-A097043] p0374 N81-22062

Application of variable structure system theory to aircraft flight control --- AV-8A and the Augmentor Wing Jet STOL Research Aircraft
[NASA-CR-164321] p0391 N81-23093

An analysis of the requirements for and the costs and benefits of the National Microwave Landing System (MLS), volume 1
[AD-A099632] p0493 N81-27071

An analysis of the requirements for, and the benefits and costs of the National Microwave Landing System (MLS), volume 2
[AD-A100018] p0493 N81-27072

Results of a feasibility study for determining the yaw angle of a landing aircraft
[AD-A099765] p0495 N81-27088

Effect of propagation distance on aircraft flyover sound duration
[AD-A099694] p0500 N81-27089

An analysis of the requirements for, and the benefits and costs of the National Microwave Landing System (MLS)
[AD-A100136] p0537 N81-28076

A method for measuring take-off and landing performance of aircraft, using an inertial sensing system
p0545 N81-29080

Control augmentation for lateral control wheel steering
[NASA-CR-164664] p0549 N81-29132

Influence of friction forces on the motion of VTOL aircraft during landing operations on ships at sea
[NASA-TM-81305] p0579 N81-30080

Simulation study of two VTOL control/display systems in IMC approach and landing
[NASA-TM-81295] p0584 N81-30136

Terminal area automatic navigation, guidance, and control 1: Automatic rollout, turnoff, and taxis
[NASA-CR-3451] p0600 N81-31224

Structural response methods and evaluation results for helicopter landing decks on 210- and 270-foot USCCG cutters
[AD-A102420] p0601 N81-31233

Flight evaluation of the STOL flare and landing during night operations
[NASA-TM-81312] p0629 N81-32151

An experimental investigation of VTOL flying qualities requirements or shipboard landings
[AD-A104137] p0638 N81-33199

Simulator evaluation of the effects of reduced spoiler and thrust authority on a decoupled longitudinal control system during landings in wind shear
[NASA-TM-83188] p0639 N81-33211

AIRCRAFT LAUNCHING DEVICES

F/A-18's landing, launch and recovery system
p0005 A81-11244

F/A-18A Initial Sea Trials
p0458 A81-38857

AIRCRAFT MAINTENANCE

Productivity - The challenge of aircraft and engine maintenance
p0102 A81-17045

Issues regarding Army turboshaft engines diagnostics and condition monitoring
p0105 A81-17514

New NDT techniques used for aircraft maintenance
p0153 A81-20168

Designing the Hornet for improved R and M
[AIAA PAPER 81-0230] p0162 A81-20688

ORLA - An assessment of risks --- Optimum Repair Level Analysis
p0229 A81-24257

Determination of aircraft structural inspection intervals
p0230 A81-24285

The maintenance of the Airbus from the user's point of view
p0287 A81-28470

Contribution to the improvement of the classical method of maintenance of aeroengines
p0290 A81-29055

Improved jet engine maintenance through automated vibration diagnostic systems
[ASME PAPER 81-GT-62] p0313 A81-29972

Commercial engine logistics cost projections - A dynamic and flexible approach
[ASME PAPER 81-GT-114] p0315 A81-30018

Simulation techniques for new generation aircraft maintenance training devices
p0324 A81-30331

Logistics support of avionic software stored on erasable programmable read only memory
p0327 A81-30356

Maintenance tomorrow and the day after --- of wide-bodied transport aircraft
p0367 A81-33790

Airliner maintenance for fuel efficiency
[AIAA PAPER 81-0787] p0367 A81-33877

Maintenance program analysis for aircraft structures of the 80's - MSG-3
[SAE PAPER 801214] p0404 A81-34222

Application of BFRP Crack Patching to Mirage III aircraft
p0481 A81-40586

Advanced composite structure repair
p0481 A81-40595

Composites - A solution to aluminum honeycomb maintenance costs --- for aircraft structures
p0529 A81-43600

S-3A composite spoilers service experience
p0529 A81-43615

A-7 composite outer wing service experience
p0530 A81-43617

Development of repair procedures for graphite/epoxy structures on commercial transports
p0531 A81-43645

Maintenance and repair of advanced composite structure
p0558 A81-44382

Review of Navy composite repair program
p0558 A81-44383

Composite repair concepts for depot level use
p0558 A81-44384

Advanced composite repair - Recent developments and some problems
p0558 A81-44385

Advanced structural repair for lower cost
p0558 A81-44393

Repair of adhesive bonded structure on commercial aircraft
p0559 A81-44394

Development of large-area damage repair procedures for the F-14A horizontal stabilizer. Phase I - Repair development
p0559 A81-44395

Nonhoneycomb composite skin stabilization - A solution to high costs of maintenance
p0559 A81-44396

SR-71 imposes burden on maintenance units
p0565 A81-45748

The roles of airline engineering and maintenance in 1981 --- summary for 26 January 1981 conference of ATLAS group
p0565 A81-45755

HH-65A Dolphin engine condition monitoring system
p0575 A81-46636

Reliability and maintainability evaluation of rotor systems
p0576 A81-46645

Simulation model to evaluate maintenance strategies for large network of fielded systems
p0613 A81-48009

F-100s set to become target drones
p0614 A81-48067

Engine requirements for the T-37 trainer aircraft - A simulation study and analysis
p0616 A81-48379

Compatibility of aircraft operational fluids with a graphite/epoxy composite: Development of an exterior coating system and remover
[AD-A090049] p0039 N81-11120

Reliability-centered maintenance
p0047 N81-11917

Impact of maintainability of life cycle costs
p0047 N81-11921

Naval aircraft operating and support cost-estimating model: FY78 revision
[AD-A090044] p0071 N81-12013

Aircraft maintenance. Citations from the International Aerospace Abstracts data base
[NTIS/PS-79/0859/3] p0125 N81-13917

Feasibility evaluation of advanced multifrequency eddy current technology for use in naval air maintenance environment
[AD-A093314] p0220 N81-17476

Application of scheduling heuristics on the aircraft maintenance depot
[AD-A094815] p0261 N81-19015

Uses of AIDS data in airlines engine maintenance
p0328 N81-20016

Concept definition: Retirement for cause of F-100 rotor components
[AD-A095584] p0335 N81-20080

Development of maintenance metrics to forecast resource demands of weapon systems. Analysis and evaluation, revision A
[AD-A096688] p0381 N81-22971

Development of maintenance metrics to forecast resource demands of weapon system. Maintenance metrics and weightings, revision A
[AD-A096689] p0381 N81-22972

Development of maintenance metrics to forecast resource demands of weapon systems. Analysis and results of metrics and weightings, revision A
[AD-A096690] p0381 N81-22973

Aircraft modification management evaluation
[AD-A096458] p0381 N81-22974

Structural design of BFRP patches for Mirage wing repair
[AD-A097195] p0384 N81-23024

An analysis of opportunistic maintenance policy for the F100PW100 aircraft engine
[AD-A097548] p0384 N81-23025

F-16 integrated logistics support: Still time to consider economical alternatives
[PB81-137473] p0389 N81-23079

Weapons system support resources demand parameters - logistics
[AD-A097517] p0394 N81-23937

Helicopter transmission qualification procedures and tests
p0433 N81-24101

Operational and support costs of the Navy's F/A-18 can be substantially reduced
[PB81-160814] p0487 N81-26125

PACER LIME: An environmental corrosion severity classification system, part 1
[AD-A100496] p0539 N81-28089

Actual versus simulated equipment for aircraft maintenance training: Cost implications of the incremental versus the unique device
[AD-A102388] p0590 N81-31104

Estimating aircraft depot maintenance costs
[AD-A103623] p0631 N81-33133

A study of the factors affecting productivity at the Naval Air Rework Facilities
[AD-A103783] p0631 N81-33134

A prescriptive model for resource allocation at the intermediate level engine facility
[AD-A103785] p0632 N81-33135

Development of maintenance metrics to forecast resource demands of weapon systems
[AD-A104089] p0632 N81-33136

AIRCRAFT MANEUVERS

Piloted simulation studies of helicopter agility
p0003 A81-10767

Multivariable aircraft control by manoeuvre commands - An application to air-to-ground gunnery
[ONERA, TP NO. 1980-127] p0009 A81-11623

Initial experience with methods to evaluate flight test characteristics with operational flight maneuvers
p0017 A81-11782

Roll and spin measurements in the low speed wind tunnel at Braunschweig
p0065 A81-15704

The effect of aerodynamic coupling on the dynamics of aircraft in fast rolling motion
p0104 A81-17471

Drag reduction through formation flight
[DGLR PAPER 80-106] p0120 A81-19393

Planning for and evaluating the potential of a land based aircraft for carrier operations
p0122 A81-19470

New techniques for the monopulse-radar tracking of high-maneuverability aircraft
p0153 A81-20102

Robust autoregressive models for predicting aircraft motion from noisy data
p0155 A81-20473

Control strategy for tracking a maneuverable model
[AIAA PAPER 81-0609] p0160 A81-20593

Bounds for the additional cost of near-optimal controls
p0170 A81-21075

Transonic maneuver/cruise airfoil design employing active diffusion control
p0239 A81-26511

Evaluation of the effect of actuator time lag on the minimum control power of a VTOL aircraft
p0319 A81-30160

Avionics computer system support at Ogden ALC
p0320 A81-30243

RAPIDLOADS - A preliminary design loads prediction technique for aircraft
[SAWE PAPER 1366] p0353 A81-31308

HiMAT systems development results and projections
[SAE PAPER 801175] p0400 A81-34188

Air combat advantages from reaction control systems
[SAE PAPER 801177] p0400 A81-34190

U.S. Navy/USAF development of Tactical Aircrew Combat Training System/Air Combat Maneuvering Instrumentation /TACTS/ACMI/
[SAE PAPER 801183] p0401 A81-34196

Energy maneuverability displays for air combat training
[SAE PAPER 801185] p0401 A81-34198

The problem of the minimum-time turn of a maneuverable aircraft velocity vector to a specified course angle
p0413 A81-36472

Effect of acceleration switching during INS in-flight alignment
p0458 A81-38897

'Load snubbing' - A solution to the problem of terrain flying with external cargo
[AHS 80-32] p0476 A81-40162

Aiming computation for fighter weapon aiming system
p0480 A81-40448

TELS - A facility to observe the effect of simulated flight maneuver loads on turbine engines
[AIAA PAPER 81-1591] p0508 A81-40966

LQG controls for highly maneuverable aircraft --- Linear quadratic Gaussian
[AIAA PAPER 81-1709] p0527 A81-43163

Kinematic properties of rotary-wing and fixed-wing aircraft in steady coordinated high-g turns
[AIAA PAPER 81-1855] p0560 A81-44554

Time-constrained maximum-energy turns --- for modern fighter aircraft
[AIAA PAPER 81-1886] p0561 A81-44576

Influence of sideslip on the kinematics of the helicopter in steady coordinated turns
p0576 A81-46648

Active gust- and maneuver load control concepts, taking into account, as example, the Airbus A300. I - Design of a controller in the temporal domain for the alleviation of gust loads and the control of the effectiveness for stochastic gusts
[DGLR PAPER 81-065A] p0608 A81-47552

Active gust- and maneuver load reduction concepts, taking into account, as an example, the Airbus A300. II - Design of a controller for gust and maneuver load reduction in the frequency range
[DGLR PAPER 81-065B] p0608 A81-47553

A multivariate approach to handling qualities rating scale development
[AD-A089825] p0037 N81-11047

Flight test handbook: Flying qualities theory and flight test techniques
[AD-A090525] p0076 N81-12073

Helicopter In-flight Validation System (HELIVALS)
[AD-A091129] p0092 N81-13050

Pseudosteady-state analysis of nonlinear aircraft maneuvers
[NASA-TP-1758] p0094 N81-13065

Maneuvering aircraft: Noise pollution and control. Citations from the NTIS data base
[PB80-815566] p0135 N81-14525

Energy maneuverability display for the Air Combat Maneuvering Range/Tactical Training System (ACMR/TACTS)
[AD-A092974] p0208 N81-17041

Evaluation of AFIT/F-16 restraint concepts in the + or - 2Gy environment
[AD-A094323] p0249 N81-18034

Time-constrained maximum-energy turns
[AD-A094733] p0273 N81-19107

A computer technique for detailed analysis of mission radius and maneuverability characteristics of fighter aircraft
[NASA-TP-1837] p0329 N81-20026

Optimum maneuvers of supersonic aircraft, volumes 1 and 2
p0332 N81-20060

Application of a performance modeling technique to an airplane with variable sweep wings
[NASA-TP-1855] p0426 N81-24048

Validation study of the V/STOL aerodynamics and stability and control manual
[AD-A099236] p0486 N81-26119

Quantifying reactive maneuvers
[AD-A101136] p0539 N81-28091

Investigation of high-angle-of-attack maneuver-limiting factors. Part 1: Analysis and simulation --- F-4J and F-14A aircraft
[AD-A101646] p0581 N81-30113

Investigation of high-angle-of-attack maneuver-limiting factors. Part 2: Piloted simulation assessment of Bihrle departure criteria
[AD-A101647] p0581 N81-30114

Investigation of high-angle-of-attack maneuver-limiting factors. Part 3: Appendices, aerodynamic models
[AD-A101648] p0581 N81-30115

Statistical review of counting accelerometer data for Navy and Marine fleet aircraft from 1 January 1962 to 31 December 1980

[AD-A102495] p0596 N81-31187
Transition and conversion trim-maps for the AV-8A VTOL aircraft
[AD-A102155] p0596 N81-31188
Captive aircraft testing at high angles of attack
[AD-A103108] p0628 N81-32140
Development of an aircraft maneuver load spectrum based on VGH data
[AD-A102750] p0628 N81-32142

AIRCRAFT MODELS
Model tests for an active rotor isolation system
[MBB-278-79-0] p0018 A81-12095
Testing model rotorcraft for overwater operations p0111 A81-18056
High-level languages in affordable aircraft simulators p0154 A81-20418
A new concept for dynamic stability testing --- for aircraft model in orbital path
[AIAA PAPER 81-0158] p0161 A81-20638
Aircraft lateral parameter estimation from flight data with unsteady aerodynamic modelling
[AIAA PAPER 81-0221] p0162 A81-20684
Response characteristics of a linear rotorcraft vibration model
[AIAA 81-0616] p0305 A81-29477
Estimation of dynamic stability parameters from drop model flight tests p0410 A81-35551
Some characteristics of aircraft motion at large angles of attack p0414 A81-36473
Twin-rotor patrol airship flying model
[AIAA 81-1312] p0456 A81-38529
Co-axial rotor aerodynamics in hover p0465 A81-39899
On the use of approximate models in helicopter flight mechanics p0471 A81-40122
Identification of a linear model of rotor-fuselage dynamics from nonlinear simulation data p0472 A81-40125
The experimental and analytical definition of helicopter modeling effects
[AHS 80-4] p0473 A81-40139
Engine duty cycle estimation for conceptual design aircraft
[AIAA PAPER 81-1368] p0514 A81-42179
Analytical techniques for the analysis of stall/spin flight test data
[SAE PAPER 810599] p0521 A81-42756
Modelling of gusts and wind shear for aircraft assessment and certification p0528 A81-43376
Airborne antenna pattern calculations p0532 A81-43708
Spin research on a twin-engine aircraft
[AIAA PAPER 81-1667] p0534 A81-43943
Determination of model structure and parameters of an airplane from pre- and post-stall flight data
[AIAA PAPER 81-1866] p0560 A81-44562
Design and construction of a model which is dynamically similar to the A310 wing
[DGLR PAPER 81-035] p0608 A81-47556
Model design and instrumentation for intermittent cryogenic wind tunnels p0037 N81-11058
Rotary balance data for a single engine general aviation design having a high aspect-ratio canard for an angle-of-attack range of 30 deg to 90 deg
[NASA-CR-3170] p0090 N81-13022
Laboratory studies of flight mechanics using catapult launched models
[AAAF-NT-80-15] p0210 N81-17055
AIRCL: A programmed system for generating NC tapes for airplane models. User's manual
[NASA-CR-165687] p0340 N81-21058
Unpowered aerodynamic characteristics of a 15-percent scale model of a twin-engine commuter aircraft
[NASA-TM-81284] p0537 N81-28055

GASP- General Aviation Synthesis Program. Volume
6: Performance. Part 1: Theoretical development
[NASA-CR-152303-VOL-6-PT-1] p0271 N81-19093
Investigation of Flight Test Methods for measuring
the performance of general aviation aircraft
[NASA-CR-164057] p0333 N81-20065
Analytical study of the cruise performance of a
class of remotely piloted, microwave-powered,
high-altitude airplane platforms
[NASA-TM-81969] p0374 N81-22080
Relationships for a flight performance computer
p0382 N81-23014
The use of aircraft integrated data system at KLM
--- performance monitoring
p0383 N81-23019
Application of a performance modeling technique to
an airplane with variable sweep wings
[NASA-TP-1855] p0426 N81-24048
System digitization: Its effect in the cockpit
--- on performance
[SNIAS-802-111-115] p0428 N81-24062
performance control and qualification tests of
civil aviation turbine engines in tests
conducted by airframe manufacturers
p0430 N81-24078

Structures and Dynamics Division research and technology plans, fiscal year, 1981
[NASA-TM-83137] p0491 N81-26497

Pilot-optimal multivariable control synthesis by output feedback
[NASA-CR-163112] p0540 N81-28102

Methods of testing aircraft performance under icing conditions and ice tection systems
p0545 N81-29083

A method for measuring take-off and landing performance of aircraft, using an inertial sensing system
p0545 N81-29088

Conceptual/preliminary design study of subsonic v/stol and stovl aircraft derivatives of the S-3A
[NASA-TM-81310] p0547 N81-29118

US and USSR Military Aircraft and Missile Aerodynamics 1970-1980. A selected, annotated bibliography, volume 1
[NASA-TM-81951] p0547 N81-29119

Applications of dynamic stability parameters to problems in aircraft dynamics
p0592 N81-31122

Design and analysis of a fuel-efficient single-engine, turboprop-powered, business airplane
[NASA-CR-165768] p0596 N81-31184

Design of optimal inputs for the identification of characteristics of aircraft flights --- parameter identification control theory
p0631 N81-33131

Vertical lift capabilities for the 80's and 90's
p0632 N81-33139

Ten years of US Marine Corps Harrier operations
p0632 N81-33140

Historical overview of V/STOL aircraft technology
p0633 N81-33143

Recent progress in V/STOL aircraft technology
p0633 N81-33144

Multi-mission STOVL with vectored thrust engines
p0633 N81-33149

Mission potential of derivatives of the XV-15 tilt rotor research aircraft
p0634 N81-33150

Statistics of some atmospheric turbulence records relevant to aircraft response calculations
[NASA-CR-3464] p0637 N81-33191

AIRCRAFT PILOTS

Flight management systems - Central ingredient of the 1980's avionics shipset
[SAE PAPER 800626] p0063 A81-15342

Primary training of military pilots - Changing theories and new trainers
p0122 A81-19498

Some aspects of advanced flight management systems and their application to modern transport aircraft
p0154 A81-20353

U.S. Navy/USAF development of Tactical Aircrew Combat Training System/Air Combat Maneuvering Instrumentation /TACTS/ACMI/
[SAE PAPER 801183] p0401 A81-34196

Development of an aviator's night vision imaging system /ANVIS/
p0463 A81-39573

A piloted simulator investigation of static stability and stability/control augmentation effects on helicopter handling qualities for instrument approach
[AHS 80-30] p0476 A81-40160

Light aviation in the United States - September 1980 --- French book
p0513 A81-41903

A piloted simulation of the backup control system engagement for the YAH-64
p0576 A81-46646

Multivariable closed-loop analysis and flight control synthesis for air-to-air tracking
[AD-A090050] p0037 N81-11046

Turbulence: From a pilot's viewpoint
p0136 N81-14561

Spin recovery training
[GPO-67-439] p0216 N81-17098

A pilot's subjective analysis of a Cockpit Display of Traffic Information (CDTI) --- terminal configured vehicle
p0264 N81-19037

Operational problems experienced by single pilots in instrument meteorological conditions
[NASA-CR-166236] p0581 N81-30106

AIRCRAFT POWER SOURCES
U AIRCRAFT ENGINES

AIRCRAFT PRODUCTION

DRAPO - Computer-assisted design and manufacturing system
p0007 A81-11610

Application of weldbonding to A-10 production aircraft
p0013 A81-11652

The Grumman Aerospace and Gulfstream American Gulfstream III case study in aircraft design --- Book
p0101 A81-16720

Automatization of the adhesion process for supporting airframe parts in light contour systems
p0118 A81-19297

Optimization of finishing conditions --- metal cutting
p0319 A81-30163

Classification of links of assembly units with respect to the character of their connections, and calculation of the accuracy of their execution --- in airframe construction
p0319 A81-30168

Design, fabrication, calibration, application, and testing of advanced aircraft weighing systems
[SAWE PAPER 1383] p0353 A81-31399

Aircraft assembly --- Russian book
p0355 A81-31872

The impact of the All Electric Airplane on production engineering
[AIAA PAPER 81-0848] p0362 A81-32909

Bonded laminated structures in aircraft manufacture --- Russian book
p0366 A81-33700

An aircraft manufacturer's view of airport R&D needs
[AIAA PAPER 81-0793] p0368 A81-33887

The CADAM system for aircraft structural design
[SAE PAPER 801208] p0403 A81-34216

Design, fabrication and test of a complex helicopter airframe section
[SAE PAPER 801213] p0404 A81-34221

Integrated flexible sheet-metal components - Manufacturing center
p0449 A81-37633

Efficient manufacturing procedures for the production of helicopter rotor blades
[MBB-UD-312-80-OE] p0449 A81-37636

Automatic riveting installation for spherical aircraft parts
p0450 A81-37641

Computer-aided design and manufacture in aircraft production /CAD/CAM/
p0451 A81-37647

Advanced production methods for the Dornier 228
p0457 A81-38802

A study of the economic impact of noise limits on new design and current production helicopters
[AHS 80-64] p0479 A81-40187

Fibre reinforced composite applications at De Havilland
[SAE PAPER 810640] p0524 A81-42784

Technology for rustproofing aircraft and helicopters --- Russian book
p0529 A81-43520

Concurrent superplastic forming/diffusion bonding of titanium airframe components
p0531 A81-43638

Flight-vehicle production technology --- Russian book
p0564 A81-45603

Electric installation work on aircraft --- Russian book
p0577 A81-46794

Damage recognition and localization by means of differential modal analysis
[DGLR PAPER 81-056] p0610 A81-47603

Design of production processes for flight-vehicle engines --- Russian book
p0623 A81-49475

A method for estimating the cost of aircraft structural modification
[AD-A099327] p0483 N81-26035

AIRCRAFT PRODUCTION COSTS
NT AIRPLANE PRODUCTION COSTS

The design-to-cost of aircraft
p0119 A81-19344

Design to cost and new technologies
p0120 A81-19347

Material shortages - Effect on the commercial aircraft industry
[AIAA 81-0508] p0300 A81-29386
Material shortages - Effect on the aircraft engine industry
[AIAA 81-0509] p0301 A81-29387
Manufacturing cost/design guide /MC/DG/ for metallic and composite structures
[AIAA 81-0510] p0302 A81-29424
ICAM 'Manufacturing Cost/Design Guide' /MC/DG/ --- Integrated Computer Aided Manufacturing for aircraft systems
[AIAA PAPER 81-0855] p0408 A81-34353
The ICAM 'Manufacturing Cost/Design Guide' /MC/DG/ for Avionics
p0558 A81-44375
Design to Cost and Life Cycle Cost
[AGARD-CP-289] p0045 N81-11902
The Hornet program: A design to life cycle cost case study
p0046 N81-11910
Design to cost and the F-16 multirole fighter
p0046 N81-11911
Structural integration as a means of cost reduction
p0046 N81-11912
Design-to-cost and new technologies
p0046 N81-11913
Organizing a design-to-cost program
p0046 N81-11914
A new method for estimating transport aircraft direct operating costs
p0046 N81-11915
Design-to-cost applied to the AS350 helicopter
p0046 N81-11916
Estimation of relative total cost for aircraft systems
p0047 N81-11922
Using cost reduction concepts at Messier-Hispano-Bugatti
p0047 N81-11923
A cost function for military airframes
[AD-A097538] p0394 N81-23966
A cost function for an airframe production program
[AD-A097540] p0394 N81-23967

AIRCRAFT RELIABILITY

Reliability and engineering-economic characteristics of aircraft engines --- Russian book
p0001 A81-10045
Subsequent proof of damage tolerance for a landing gear component after numerous takeoffs and landings
p0006 A81-11475
Damage tolerance concept for transport aircraft structures
p0050 A81-12970
Inspection methods for various critical steel parts for airframes
p0052 A81-13331
New avenues of research in ultrasonic inspection and their applications in the aerospace industry
p0052 A81-13332
New techniques for the measurement of natural and simulated lightning phenomena
p0057 A81-14268
How do aircraft break down - Some studies of reliability data feedback
p0068 A81-16423
The contribution of structural testing to total airworthiness
p0068 A81-16424
A case study on the F-16 fly-by-wire flight control system --- Book
p0101 A81-16719
The problems of helicopter ditching
p0112 A81-18071
New NDT techniques used for aircraft maintenance
p0153 A81-20168
Designing the Hornet for improved R and M
[AIAA PAPER 81-0230] p0162 A81-20688
Helicopter fatigue qualification
p0180 A81-22623
The new look in reliability - It works --- Operational Mission Environment test program for F/A-18 aircraft
p0229 A81-24268
Development of conceptual Navy aircraft Reliability Prediction Models
p0229 A81-24280
Reliability growth measured by AFM 66-1 data
p0230 A81-24286
Some experience with ferrography in monitoring the condition of aircraft engines
p0285 A81-27943
General considerations on the importance of reliability studies for helicopters
p0287 A81-28471
General remarks on helicopter reliability
p0287 A81-28472
The reliability of helicopter reduction gears
p0287 A81-28473
Helicopter blade reliability
p0287 A81-28474
Statistical crack growth in durability and damage tolerant analyses
[AIAA 81-0492] p0300 A81-29382
Study of the crashworthiness of light aircraft structures
[AIAA 81-0574] p0302 A81-29407
Using microprocessors in fault monitoring of aircraft electronics
[ASME PAPER 81-GT-130] p0316 A81-30040
Heat pipe avionic cooling
p0326 A81-30343
Rapport tactical self protection systems design
p0349 A81-31113
Efficiency of the methods and algorithms used for estimating the reliability in aviation techniques
p0365 A81-33173
Designing for aircraft structural crashworthiness
[AIAA PAPER 81-0803] p0367 A81-33882
Acoustic emission techniques for in-flight structural monitoring
[SAE PAPER 801211] p0404 A81-34219
Component research for future propulsion systems
p0454 A81-38058
Development of a bearingless helicopter tailrotor
p0465 A81-39897
Reliability of commercial helicopters
p0472 A81-40126
An investigation of the recovery from an engine failure in a twin engine augmentor wing aircraft using the NAE Airborne Simulator
p0509 A81-41199
Advanced structural repair for lower cost
p0550 A81-44393
Philosophy of safety and reliability --- in aviation
p0561 A81-44616
Designing safety into helicopter transmissions
p0575 A81-46638
Reliability and maintainability evaluation of rotor systems
p0576 A81-46645
A piloted simulator investigation of static stability and stability/control augmentation effects on helicopter handling qualities for instrument approach
[NASA-TM-81188] p0029 N81-10077
Exploratory study of hazard mitigation and research in the air transport system
[AD-A089204] p0033 N81-11021
Summary of Federal Aviation Administration responses to National Transportation Safety Board safety recommendations
[AD-A089971] p0033 N81-11022
Some engineering aspects of life cycle costing
p0047 N81-11918
AEROMEXICO DC-10-30, XA-DUH, over Luxembourg, Europe
[NTSB-AAR-80-10] p0073 N81-12042
The changing scene of structural airworthiness
[AAAF-NT-79-24] p0077 N81-12076
Testing of composite structures
[AAAF-NT-79-41] p0083 N81-12181
Preliminary airworthiness evaluation OH-58C helicopter configured with a mast mounted sight
[AD-A094172] p0252 N81-18052
Improving aircraft safety
[PB81-114886] p0270 N81-19083
The F/A-18 Naval Strike Fighter: Progress has been made but problems and concerns continue
[AD-A095287] p0333 N81-20069
Description of the British Civil Aviation Airworthiness Data Recording Programme (CAADRP) --- analysis of flight recorder data
p0383 N81-23017
Method for computation of structural failure probability for an aircraft
[AD-A098294] p0426 N81-24050

Helicopter transmission qualification procedures and tests
p0433 N81-24101

Helicopter transmission testing
p0433 N81-24102

Prediction of future test needs, test facilities and procedures
p0433 N81-24104

AH-1S(Prod) airworthiness and flight characteristics for instrument flight
[AD-A100946] p0548 N81-29121

Factors of safety related to structural integrity. A review of data from military airworthiness authorities
[AGARD-R-677] p0596 N81-31186

AIRCRAFT SAFETY

Ground testing of aircraft antistatic protection
[ONERA, TP NO. 1980-126] p0015 A81-11674

Civil aviation safety. III - Prospects of improvement
p0017 A81-11900

Lightning near fields generated by return stroke current
p0056 A81-14257

Flying safely /Revised and enlarged edition/ --- Book
p0068 A81-16198

Sarsat - A rescue system for ships and aircraft
p0100 A81-16684

Safety considerations for helicopter drive systems of the 1980s
p0105 A81-17510

Helicopter survivability in overwater situations
p0114 A81-18081

Pyrotechnics serving safety --- in aircraft air and ground escape systems
p0120 A81-19348

Design and preliminary tests of an IR-airborne LLWS remote sensing system --- Low Level Wind Shear
[AIAA PAPER 81-0239] p0163 A81-20694

40 years of helicopter ice protection experience at Sikorsky Aircraft
[AIAA PAPER 81-0407] p0168 A81-20813

Bilingual air traffic control in Canada
p0169 A81-20915

Escape systems testing on the Hollcman high speed test track
p0175 A81-22088

Progress in the use of automatic flight controls in safety critical applications
p0284 A81-27902

Is it safe - The safety assessment of aircraft systems. III - The use of probability methods
p0290 A81-29029

Is it safe - The safety assessment of aircraft systems. IV - Methods, techniques, and organisation
p0366 A81-33789

Maintenance tomorrow and the day after --- of wide-bodied transport aircraft
p0367 A81-33790

Some design and procedural aspects of in-flight collision avoidance
[AIAA PAPER 81-0805] p0368 A81-33865

Wake vortex alleviation
[AIAA PAPER 81-0798] p0412 A81-35723

Is it safe - The safety assessment of aircraft systems. V - Some particular techniques
p0454 A81-38174

Design for safety --- Book
p0455 A81-38499

Fireworthiness of transport aircraft interior systems
[AIAA PAPER 81-1142] p0459 A81-39131

Fundamental studies of antimisting fuels
[AIAA PAPER 81-1422] p0515 A81-42195

Helicopter accidents
[SAE PAPER 810592] p0520 A81-42751

Determination of crash test pulses and their application to aircraft seat analysis
[SAE PAPER 810611] p0522 A81-42767

Simulation of aircraft seat response to a crash environment
[SAE PAPER 810612] p0522 A81-42768

U.S. Army crashworthiness program
[SAE PAPER 810615] p0522 A81-42771

An assessment of advanced technologies for application to general aviation
[SAE PAPER 810630] p0524 A81-42782

The F-16 Halon tank inerting system
[AIAA PAPER 81-1638] p0525 A81-43138

Conditions for safe separation of external stores
p0529 A81-43395

Spin research on a twin-engine aircraft
[AIAA PAPER 81-1667] p0534 A81-43943

General aviation aircraft rear-seated occupant protection - Shoulder restraints in rear seats
[AIAA PAPER 81-1669] p0534 A81-43944

Aerial collisions with relief features
p0557 A81-44323

Philosophy of safety and reliability --- in aviation
p0561 A81-44616

Limb restraint F-18 style
p0567 A81-46325

Safety - A prime factor in the design of Aerospatiales Super-Puma AS 332
p0572 A81-46609

NASA Aviation Safety Reporting System
[NASA-TM-81225] p0023 N81-10021

Engineering and development program plan aircraft crashworthiness

Summary of aviation safety program resumes. Cabin safety
[AD-A091938] p0192 N81-16027
The 1980 Aircraft Safety and Operating Problems, part 1
[NASA-CP-2170-PT-1] p0264 N81-19035
Evaluation of emergency-locator-transmitter performance in real and simulated crash tests
p0268 N81-19070
System safety program report MK 1 MOD 0 LSO HUD console system
[AD-A095009] p0269 N81-19080
Improving aircraft safety
[PB81-114886] p0270 N81-19083
Study of materials performance model for aircraft interiors
[NASA-CR-152378] p0333 N81-20063
Results of an active beacon collision avoidance experiment conducted in the Los Angeles airspace
[AD-A096285] p0340 N81-21053
A review of in-flight emergencies in the ASRS data base
[NASA-CR-166166] p0372 N81-22031
Analysis of ejection seat stability using easy program, volume 1
[AD-A096597] p0373 N81-22033
Description of the British Civil Aviation Airworthiness Data Recording Programme (CAADRP) --- analysis of flight recorder data
p0383 N81-23017
Summary of Federal Aviation Administration response to National Transportation Safety Board safety recommendations
[AD-A098096] p0424 N81-24038
Testing of aircraft passenger seat cushion material, full scale. Data, volume 2
[NASA-CR-160963] p0440 N81-25050
Testing of aircraft passenger seat cushion materials. Full scale, test description and results, volume 1
[NASA-CR-160995-VOL-1] p0440 N81-25051
Engineering and development program plan propulsion safety
[AD-A098709] p0444 N81-25088
Safety report: The status of general aviation aircraft crashworthiness
[PB81-160798] p0484 N81-26084
Special Aviation Fire and Explosion Reduction (SAFER) Advisory Committee, volume 2B
[AD-A099176] p0493 N81-27064
Special Aviation Fire and Explosion Reduction (SAFER) Advisory Committee, volume 2A
[AD-A099147] p0493 N81-27065
Electro-magnetic compatibility: The determination of safety for critical systems
p0545 N81-29079
An investigation of reports of Controlled Flight Toward Terrain (CFTT)
[NASA-CR-166230] p0546 N81-29108
Application of damage tolerance concepts for MBB helicopters --- mechanical properties
[MBB-UD-309/80-OE] p0580 N81-30105
The information transfer problem summary and comments
p0595 N81-31169
Factors of safety related to structural integrity. A review of data from military airworthiness authorities
[AGARD-R-677] p0596 N81-31186
Improving the crashworthiness of general aviation aircraft by crash injury investigations
[AD-A103316] p0636 N81-33174
Test and evaluation of an experimental feasibility prototype passive seat mounted limb restraint system
[AD-A104161] p0636 N81-33177

AIRCRAFT SPECIFICATIONS
Some experiences with numerical optimisation in aircraft specification and preliminary design studies
p0007 A81-11609
Modelling of gusts and wind shear for aircraft assessment and certification
p0528 A81-43376
The 146 emerges from the shadows
p0560 A81-44474
Current aircraft survey (approach speeds, gross weights, and Dimensions)
[PB80-225691] p0129 N81-13956
Airborne-fiber optics manufacturing technology, aircraft installation processes
[AD-A093304] p0221 N81-17902

AIRCRAFT SPIN
A geometrical study of the steady-state spin for a typical low-wing general aviation aircraft
p0454 A81-38023
Spin research on a twin-engine aircraft
[AIAA PAPER 81-1667] p0534 A81-43943
Spin - Angles and inertial moments
p0567 A81-46023
Influence of light aircraft architecture on its spin characteristics
[AAAF-NT-80-11] p0081 N81-12111
Some new research approaches to aircraft spin studies
[AAAF-NT-80-12] p0082 N81-12112
A flight investigation of the ultra-deep-stall descent and spin recovery characteristics of a 1/6 scale radiocontrolled model of the Piper PA38 Tomahawk
[NASA-CR-156871] p0343 N81-21084
TORNADO: Flight characteristics at high angles of incidence
[MBB-FE-127/S/PUB/23] p0495 N81-27085

AIRCRAFT STABILITY
NT HOVERING STABILITY
A stability augmentation system which covers the complete flight envelope for a F-4c aircraft without gain scheduling
p0009 A81-11622
Dynamic stability parameters at high angles of attack
p0009 A81-11624
Model tests for an active rotor isolation system
[MBB-278-79-O] p0018 A81-12095
Active suppression of aircraft flutter
p0059 A81-14397
Gear meshing action as a source of vibratory excitation
p0150 A81-20061
Disturbance estimation for a STOL transport during landing
[AIAA PAPER 81-0018] p0158 A81-20542
Practical gust load alleviation and flutter suppression control laws based on a LQG methodology --- Linear Quadratic Gaussian
[AIAA PAPER 81-0021] p0158 A81-20544
A new concept for dynamic stability testing --- for aircraft model in orbital path
[AIAA PAPER 81-0158] p0161 A81-20630
Damping of aircraft wing vibrations by automatically controlled internal forces
p0170 A81-21060
Active controls for civil aircraft
p0228 A81-24070
Aircraft dynamic stability and response --- Book
p0232 A81-25173
Curved-flow, rolling-flow, and oscillatory pure-yawing wind-tunnel test methods for determination of dynamic stability derivatives
p0241 A81-26933
Aeroelastic stability of aircraft --- Russian book
p0281 A81-27531

Aircraft stability at high incidence
p0282 A81-27878

Roll stabilization of flight vehicles by means of rollerons
p0290 A81-29016

Unsteady aerodynamic propulsion
[AIAA 81-0645] p0307 A81-29498

A wind-tunnel study of the flutter characteristics of a supercritical wing
p0308 A81-29504

CH-53E combat survivability assessment and survivability enhancement program
[SAWE PAPER 1384] p0354 A81-31400

Generalized active control - Its potential and directions of research
[AAAF PAPER NT 80-29] p0369 A81-33928

Estimation of dynamic stability parameters from drop model flight tests
p0410 A81-35551

Applications of dynamic stability parameters to problems in aircraft dynamics
p0410 A81-35552

Control system design using graphical decomposition techniques
p0410 A81-35567

Wind tunnel determination of dynamic cross-coupling derivatives - A new approach
p0413 A81-35927

Airship survivability in atmospheric turbulence
[AIAA 81-1323] p0456 A81-38533

Bulkheads in airships
[AIAA 81-1328] p0456 A81-38536

Simulation of Heavy Lift Airship dynamics over large ranges of incidence and speed
[AIAA 81-1335] p0457 A81-38540

Identification of a linear model of rotor-fuselage dynamics from nonlinear simulation data
p0472 A81-40125

Aeroelastic stability analysis of hingeless rotor helicopters in forward flight using blade and airframe normal modes
[AHS 80-24] p0475 A81-40154

An experimental investigation of the effects of aeroelastic couplings on aeromechanical stability of a hingeless rotor helicopter
[AHS 80-25] p0475 A81-40155

Effect of in-flight thrust reverser deployment on tactical aircraft stability and control
[AIAA PAPER 81-1446] p0504 A81-40879

Development of a simple, self-contained flight test data acquisition system
[SAE PAPER 810596] p0520 A81-42754

Effects of wingtip modifications on handling qualities of agricultural aircraft
[SAE PAPER 810606] p0522 A81-42763

Control characteristics of a Buoyant Quad-Rotor Research Aircraft
[AIAA 81-1838] p0555 A81-44122

Use of atmospheric electric fields for vertical stabilization and terrain avoidance
[AIAA 81-1848] p0556 A81-44126

Determination of model structure and parameters of an airplane from pre- and post-stall flight data
[AIAA PAPER 81-1866] p0560 A81-44562

Stability characteristics of a forward swept wing aircraft at high angles of attack
[AIAA PAPER 81-1884] p0561 A81-44576

Stability of aircraft motion in critical cases
[AIAA PAPER 81-1885] p0561 A81-44577

A flight investigation of static stability, control augmentation, and flight director influences on helicopter IFR handling qualities
p0574 A81-46623

Automatic damping of vibrations of an airplane wing by internal control forces
p0577 A81-46783

Parametric synthesis of an automatic system for flight-vehicle stabilization
p0625 A81-49940

The flying qualities of aircraft with actively augmented pitch and yaw stability
[ARC-R/M-3848] p0082 N81-12113

Preliminary Airworthiness Evaluation (PAE 1) of the YCH-47D helicopter
[AD-A092633] p0194 N81-16046

An analytical study of the longitudinal response of airplanes to positive wind shear
[NASA-TP-1765] p0335 N81-20082

Pitch-flap-phase coupling. A preliminary analysis of an evolving concept of helicopter autostabilization
[BU-242] p0434 N81-24109

Flight test evaluation of predicted light aircraft drag, performance, and stability
[NASA-CR-159062] p0494 N81-27078

Parameter identification of a hingeless rotor helicopter in flight conditions with increased instability
[MBB-UD-307/80-OE] p0584 N81-30140

Dynamic Stability Parameters --- conferences
[AGARD-LS-114] p0590 N81-31105

Aerodynamic mathematical modeling - basic concepts
p0590 N81-31106

Impact of high-alpha aerodynamics on dynamic stability parameters of aircraft and missiles
p0590 N81-31107

Review of techniques for determination of dynamic stability parameters in wind tunnels
p0590 N81-31108

Wind-tunnel measurement of aerodynamic derivatives using flexible-sting rigs
p0591 N81-31110

Rotary and Magnus balances
p0591 N81-31111

Curved-flow, rolling-flow, and oscillatory pure-yawing wind-tunnel test methods for determination of dynamic stability derivatives
p0591 N81-31112

Applications of half-model technique in dynamic stability testing
p0591 N81-31114

Determination of aircraft dynamic stability and control parameters from flight testing
p0591 N81-31115

Estimation of dynamic stability parameters from drop model flight tests
p0591 N81-31116

Sensitivity of aircraft motion to cross coupling and acceleration derivatives
p0592 N81-31120

AIRCRAFT STRUCTURES
NT AFTERBODIES
NT AIRFRAMES
NT FOREBODIES
NT FUSELAGES
NT PLASTIC AIRCRAFT STRUCTURES

Aspect ratio variability in part-through crack life analysis
p0001 A81-10355

Part-through crack problems in aircraft structures
p0001 A81-10362

Experimental application of a vibration reduction technique
p0004 A81-10770

Design and test of a graphite-epoxy composite A-10 slat
p0006 A81-11339

The analysis of fatigue failures
p0006 A81-11603

Weight optimization of wing structures according to the gradient method
p0012 A81-11650

Structural optimization of advanced aircraft structures
p0013 A81-11651

Development of the A300 fin in modern composite fibre construction
p0013 A81-11653

Nondestructive evaluation of composite structures
p0013 A81-11654

Holographic non-destructive testing of materials using pulsed lasers --- for aircraft structures
p0013 A81-11655

Structural flight load testing, calibration and analysis
p0013 A81-11656

Operational durability of airframe structures
p0014 A81-11662

Ground testing of aircraft antistatic protection
[ONERA, TP NO. 1980-126] p0015 A81-11674

Damage tolerance concept for transport aircraft structures
p0050 A81-12970

Aging study of the Caravelle 38
p0061 A81-15119

Thermal expansion molding process for aircraft composite structures

[SAE PAPER 800612] p0062 A81-15334
Calculation of critical flutter speeds on an aircraft in subsonic flow
p0068 A81-16301
Nonlinear incremental analysis up to failure of aeronautical structures
p0068 A81-16307
The automatic matrix force method and techniques for handling more complex computations with given computer capacity
p0108 A81-17815
Elimination of vibrations in aircraft piping systems --- Russian book
p0116 A81-18497
Automatization of the adhesion process for supporting airframe parts in light contour systems
p0118 A81-19297
Improving surface current injection techniques via one- and two-dimensional models
p0149 A81-19980
Measurements of structural mobility on helicopter structures
p0151 A81-20064
Application of low frequency eddy-current for inspection of civil aircraft
p0153 A81-20110
Evaluation and comparison of nondestructive service inspection methods
p0153 A81-20135
New NDT techniques used for aircraft maintenance
p0153 A81-20168
The use of acoustic emission for detecting and evaluating of fatigue cracks severity during static and cyclic loading of structure elements
p0153 A81-20214
Acoustic fatigue strength of fiber-reinforced plastic panels
p0169 A81-20873
Effect of load spectrum variables on fatigue crack initiation and propagation; Proceedings of the Symposium, San Francisco, Calif., May 21, 1979
p0172 A81-21730
An engineering model for assessing load sequencing effects --- cracks in aircraft structures
p0172 A81-21737
Evaluating spectrum effects in U.S. Air Force attack/fighter/trainer individual aircraft tracking
p0173 A81-21742
Fatigue design criteria and fleet fatigue life survey at Aeronautica Macchi
p0180 A81-22624
Project and experimental fatigue test of the wing of a modern combat aircraft
p0180 A81-22625
Definition of loading sequence for full scale fatigue test
p0180 A81-22626
Ductile fracture mechanic assessments of 2219-T851, 2024-T3 and 7075-T6 aluminum alloys
p0180 A81-22628
Crack propagation in lugs
p0180 A81-22629
Crack growth propagation under variable amplitude loading in aerospace structures
p0181 A81-22632
Composite fuselage development for Naval aircraft
p0181 A81-22648
Effect of impact damage on the XFV-12A composite wing box
p0182 A81-22676
Experiences with composite aircraft structures
p0182 A81-22678
Prospects for bonding primary aircraft structure in the 80's
p0182 A81-22679
Controls of aeronautical structures under fatigue testing by holographic pulsed lasers interferometry
p0182 A81-22692
An aeronautical structural analysis system for static analysis /HAJIF-I/
p0224 A81-23728
Supermatrix method for multi-substructure analysis
p0225 A81-23854
Prediction of structural fatigue response under aircraft loads from material stress-strain behavior
p0226 A81-24009
Isothermal rolling of aircraft parts - Versatile process saves costly materials
p0227 A81-24047
Determination of aircraft structural inspection intervals
p0230 A81-24205
The Coronel Transverse Wing Flight system
p0231 A81-24788
Comparison of 2024 and 7475 aluminum alloy sheet for tension-critical aircraft structures
p0232 A81-24942
Applicatica of hybrid schemes in analysis of thin-wall structures by the displacement method
p0235 A81-25681
Iterative method for determining maximum load capacity of aircraft structures
p0235 A81-25683
The joints of aeronautical carbon resin composite structural elements
p0238 A81-26242
The quality of nonmetallic materials
p0238 A81-26244
Failure by fatigue
p0238 A81-26419
Applications of carbon fibre composites to military aircraft structures
p0283 A81-27885
Engineering aspects of composite structures for civil aircraft
p0283 A81-27888
Simple methods of determining stress intensity factors
p0289 A81-28986
Statistical crack growth in durability and damage tolerant analyses
[AIAA 81-0492] p0300 A81-29382
Fatigue sensitivity of composite structure for fighter aircraft
[AIAA 81-0495] p0300 A81-29383
IPAD applications to the design, analysis, and/or machining of aerospace structures --- Integrated Program for Aerospace-vehicle Design
[AIAA 81-0512] p0301 A81-29388
Bolt bearing strengths of graphite/epoxy laminates
[AIAA 81-0544] p0301 A81-29396
Instability of short stiffened and composite cylindrical shells acting under pure bending moments considering prebuckling displacements
[AIAA 81-0571] p0302 A81-29405
Your next ground vibration test doesn't have to cost a million dollars
[AIAA 81-0529] p0303 A81-29450
Sonic fatigue design techniques for graphite-epoxy stiffened-skin panels
[AIAA 81-0633] p0305 A81-29488
The possibility of single-impact riveting of flat-top countersunk-head rivets --- for aircraft structures
p0319 A81-30164
Implementing Aircraft Structural Life Management to reduce structural cost of ownership
[SAWE PAPER 1331] p0352 A81-31376
Developments in the analysis and repair of cracked and uncracked structures
p0354 A81-31561
Principles of aircraft structural design /2nd revised and enlarged edition/ --- Russian book
p0355 A81-31800
Aircraft assembly --- Russian book
p0355 A81-31872
Aircraft quality assurance using close-range photogrammetry
p0358 A81-32508
In-flight fatigue crack monitoring using acoustic emission
p0361 A81-32857
Structural optimization - Past, present and future
[AIAA PAPER 81-0897] p0362 A81-32922
A new method for modal identification
p0365 A81-33293
Bonded laminated structures in aircraft manufacture --- Russian book
p0366 A81-33700
Finite element analysis of asymmetric, lateral natural vibrations of a deformable aeroplane
p0366 A81-33736
Global optimization of a glider
[AAAF PAPER NT 80-36] p0369 A81-33937

AD-1 oblique wing aircraft program
[SAE PAPER 801180] p0400 A81-34193
Adhesive bonding of aircraft primary structures
[SAE PAPER 801209] p0404 A81-34217
Integrated active controls impact on supersonic cruise vehicle structural design
[SAE PAPER 801210] p0404 A81-34218
Advanced graphite composites in the 757/767
[SAE PAPER 801212] p0404 A81-34220
Maintenance program analysis for aircraft structures of the 80's - MSG-3
[SAE PAPER 801214] p0404 A81-34222
NASA aeronautics R&T - A resource for aircraft design
[AIAA PAPER 81-0925] p0408 A81-34363
Thermomechanical behavior of a mechanically alloyed Al-4.0Mg powder alloy
p0409 A81-34851
The bonding of titanium and its alloys
p0417 A81-36663
The biparametric cycle count method and the principle of simplification --- in determination of aircraft structural fatigue life
p0419 A81-37337
Automatic riveting installation for spherical aircraft parts
p0450 A81-37641
High intensity acoustic testing to determine structural fatigue life and to improve reliability in nuclear reactor and aerospace structures
p0455 A81-38372
Bulkheads in airships
[AIAA 81-1328] p0456 A81-38536
Design and development of a thermal airship
[AIAA 81-1330] p0456 A81-38537
Low cost start-up for rigid-pressure airship
[AIAA 81-1337] p0457 A81-38541
Advanced production methods for the Dornier 228
p0457 A81-38802
Investigation of shot peening as a forming process for aircraft wing skins
p0458 A81-39046
Fireworthiness of transport aircraft interior systems
[AIAA PAPER 81-1142] p0459 A81-39131
Investigations of helicopter structural dynamics and a comparison with ground vibration tests
p0467 A81-40087
Model 206L composite vertical fin
[AHS 80-34] p0478 A81-40175
The substantiation of the structural integrity of the YAH-64 control actuators with material variations
[AHS 80-51] p0478 A81-40178
Advanced composite structure repair
p0481 A81-40595
An evaluation of vacuum centrifuged titanium castings for helicopter components
p0510 A81-41516
Titanium net shapes by a new technology. I - F-14A parts evaluation
p0511 A81-41649
Selection of notch geometry and notching technique for studying the fracture toughness of materials and full-scale structures --- of Al alloys
p0516 A81-42356
Summary of typical parameters that affect sound transmission through general aviation aircraft structures
[SAE PAPER 810562] p0518 A81-42728
Antennas-avionics systems relationship
[SAE PAPER 810579] p0519 A81-42742
Predicting fatigue crack growth on aircraft structures
[SAE PAPER 810593] p0520 A81-42752
Matrix load analysis method for flexible aircraft structures
[PAPER 810610] p0522 A81-42766
Fibre reinforced composite applications at De Havilland
[SAE PAPER 810640] p0524 A81-42784
Measurement of natural aircraft icing conditions
[AIAA PAPER 81-1646] p0526 A81-43143
On certification of composite structures for USAF aircraft
[AIAA PAPER 81-1686] p0527 A81-43158
Real-time fluoroscopic imaging system for honeycomb bond structures
p0529 A81-43563
Composites - A solution to aluminum honeycomb maintenance costs --- for aircraft structures
p0529 A81-43606
NASA service experience with composite components --- for aircraft structures
p0529 A81-43607
Electrical/electromagnetic concerns associated with advanced composite materials in aerospace systems
p0530 A81-43630
Advanced titanium metallic materials and processes for application to naval aircraft structures
p0531 A81-43636
Development of repair procedures for graphite/epoxy structures on commercial transports
p0531 A81-43645
Manufacturing the F-16 composite horizontal tail
p0531 A81-43646
Advanced ultrasonic testing of aerospace structures
p0557 A81-44329
Utilization in industry of ICAM 'Manufacturing Cost/Design Guide' /MC/DG/ for metallic structures
p0558 A81-44374
Maintenance and repair of advanced composite structure
p0558 A81-44382
Composite repair concepts for depot level use
p0558 A81-44384
Advanced composite repair - Recent developments and some problems
p0558 A81-44385
Advanced structural repair for lower cost
p0558 A81-44393
Repair of adhesive bonded structure on commercial aircraft
p0559 A81-44394
Development of large-area damage repair procedures for the F-14A horizontal stabilizer. Phase I - Repair development
p0559 A81-44395
Nonhoneycomb composite skin stabilization - A solution to high costs of maintenance
p0559 A81-44396
Skin-stabilized horizontal stabilizer for the T-38 aircraft
p0559 A81-44398
Flight-vehicle production technology --- Russian book
p0564 A81-45603
SR-71 imposes burden on maintenance units
p0565 A81-45748
New designs for improved aerodynamic stability on recent Aerospatiale helicopters
p0574 A81-46625
Development of composite material helicopter structures
p0576 A81-46641
Helicopter External Gondola System
p0576 A81-46642
Survivors on the RPV front
p0577 A81-46725
Use of carbon composites in aircraft structures
p0577 A81-46813
A formulation of the shimmy problem for swiveling wheels
p0607 A81-47268
Measures for increasing the service life of riveted, aircraft-relevant joints
[DGLR PAPER 81-052] p0609 A81-47564
Recognizing defects in carbon-fiber-reinforced plastics
[DGLR PAPER 81-057] p0609 A81-47565
High peak energy shaped-pulse electromagnetic crack detection
p0611 A81-47785
Developing design allowables for composite helicopter structures
p0611 A81-47811
Cost-effective mechanical property characterization
p0612 A81-47813
A practical probabilistic method for evaluating the fail-safeness of structures that may fail due to fatigue
p0612 A81-47880
Sliding-seal electron beam slot welding of an aircraft wing closure beam
p0614 A81-48142

Stress concentration in elements of aircraft
structures --- Russian book
p0623 A81-49871
The effect of the skewness of the skin panels on
stresses in conical wings
p0625 A81-49930
Geometrically nonlinear theory for calculating
thin rods of a wing profile
p0625 A81-49935
Strength calculation of thin-wall rods of
significant taper
p0625 A81-49937
Elastomers used in aeronautics industry
[SNIAS-801-551-105] p0031 N81-10168
Evaluation of section properties for hollow
composite beams

Computer-aided roll pass design in rolling of airfoil shapes
p0065 A81-15796
Variational principles and generalized variational principles for the hybrid aerodynamic problem of airfoil cascades on an arbitrary stream sheet of revolution
p0107 A81-17741
Second order approximation theory of an arbitrary aerofoil in incompressible potential flow
p0108 A81-17803
Aerodynamic calculations and design of subcritical aerofoils
p0108 A81-17804
Reduction of profile drag by blowing out through peg holes in areas of streamline separation bubbles
[DGLR PAPER 80-103] p0120 A81-19392

Experimental investigation of a right angle wing with partially separated flow with and without ground effects
[DGLR PAPER 80-111] p0120 A81-19397

Adaptive airfoils and wings for efficient transonic flight
p0153 A81-20349

Viscous-inviscid interaction on oscillating airfoils in subsonic flow
[AIAA PAPER 81-0051] p0159 A81-20567

Prediction and experimental verification of transient airfoil motion in a small wind tunnel
[AIAA PAPER 81-0052] p0159 A81-20568

Extraction of wavedrag from airfoil wake measurements
[AIAA PAPER 81-0291] p0164 A81-20732

Computer simulation of airfoil icing without runback
[AIAA PAPER 81-0402] p0167 A81-20809

An analytical approach to airfoil icing
[AIAA PAPER 81-0403] p0167 A81-20810

Icing tunnel tests of a glycol-exuding porous leading edge ice protection system on a general aviation airfoil
[AIAA PAPER 81-0405] p0168 A81-20837

A discrete vortex method for the non-steady separated flow over an airfoil
p0179 A81-22568

Calculation of nonlinear compressibility effects of airfoils in subcritical conditions
p0225 A81-23853

The problem of the unsteady hypersonic flow past a plane profile
p0231 A81-24730

Plane transonic solution with shock by direct iteration
p0231 A81-24814

Recent developments in integral equation method in transonic flow
p0234 A81-25384

Unsteady Newton-Busemann flow theory. I - Airfoils
p0234 A81-25512

Calculation of flow with variable specific heat around a profile
p0235 A81-25689

A mathematical computer simulation of stationary and nonstationary flow of an ideal incompressible fluid around solid profiles and arrays
p0237 A81-26045

Generation of vortex noise in flow past a profile in a channel
p0238 A81-26134

Design considerations of advanced supercritical low drag suction airfoils
p0240 A81-26514

Coupled bending-torsion vibrations of rotating blades of asymmetric aerofoil cross section with allowance for shear deflection and rotary inertia by use of the Reissner method
p0289 A81-28942

A method for obtaining shockless transonic flows past two-dimensional airfoils whose profiles are partially modified from a given arbitrary profile
p0298 A81-29201

Semi-inverse method of computation in inviscid transonic flows - Application to the design of turbomachines blades profiles
[ASME PAPER 81-GT-206] p0318 A81-30096

On the design of modern airfoil sections by numerical methods
p0347 A81-30705

Approximations and short cuts based on generalized functions
p0347 A81-30730

New interpretations in the theory of viscous incompressible fluid flow past airfoil profiles
p0349 A81-31044

Concerning Khristianovich's transformation of a subsonic flow past an airfoil into a low-speed flow
p0349 A81-31045

Fluid mechanics mechanisms in the stall process of airfoils for helicopters
p0360 A81-32779

On St. Venant flexure and torsion problem for symmetrical airfoil sections
p0365 A81-33245

Experimental study of the separation at the trailing edge of an axisymmetrical contoured after-body
p0365 A81-33281

A new method of airfoil flutter control
p0367 A81-33884

Inspection of turbine blades using computer aided laser technology
[SAE PAPER 801173] p0400 A81-34187

The influence of surface roughness on boundary layer flow and separation at transonic speeds
p0413 A81-36460

A PANSONIC Navier-Stokes solver --- for two dimensional flow about arbitrary airfoil sections
[AIAA PAPER 81-1195] p0454 A81-38077

Application of unsteady airfoil theory to rotary wings
p0465 A81-39874

Propfan progress
p0480 A81-40459

Aerodynamic characteristics of an advanced technology propeller for commuter aircraft
[AIAA PAPER 81-1565] p0507 A81-40948

Evolution of transport wings - From C-130, C-141, and C-5 to C-XX
p0510 A81-41333

Airfoils for light transport aircraft
[SAE PAPER 810576] p0519 A81-42740

Synthesis of test results obtained with Concorde at high incidences
[AAAF-NT-80-26] p0077 N81-12079

Rotor redesign for a highly loaded 1800 ft/sec tip speed fan, 2
[NASA-CR-159879] p0078 N81-12087

Wind-tunnel test of an articulated helicopter rotor model with several tip shapes
[NASA-TM-80080] p0125 N81-13918

Experimental study of the separation at the trailing edge of an axisymmetrical contoured after-body
p0255 N81-18257

Design of turbine cascades with transitional profile boundary layers
p0278 N81-19456

Integral equation methods for multi-element airfoil analysis and design --- including flap configurations
[NLR-MP-79020-U] p0338 N81-21038

Pressure distribution computation on a nonlifting symmetrical helicopter blade in forward flight

Oscillatory flows from shock induced separations on biconvex aerofoils of varying thickness in ventilated wind tunnels
p0386 N81-23056

Mean-flow and turbulence measurements in the vicinity of the trailing edge of an NACA (63 sub

1)-012 airfoil
[NASA-TP-1845] p0392 N81-23410
Canadian studies of wind tunnel corrections for high angle of attack models
p0435 N81-24121
Icing tunnel tests of a glycol-exuding porous leading edge ice protection system on a general aviation airfoil
[NASA-CR-164377] p0439 N81-25041
Energy efficient engine, low-pressure turbine boundary layer program
[NASA-CR-165338] p0442 N81-25077
Turbulent interactions on airfoils at transonic speeds: Recent developments
p0483 N81-26047
Final design and fabrication of an active control system for flutter suppression on a supercritical aeroelastic research wing
[NASA-CR-165714] p0496 N81-27114
Wind-tunnel evaluation of NASA developed control laws for flutter suppression on a DC-10 derivative wing
[NASA-TM-83143] p0499 N81-27548
Flutter analysis fo two-dimensional and two-degree-of-freedom MBB A-3, CAST 7, an TF-8A supercritical airfoils in small-disturbance unsteady transonic flow
[AD-A100334] p0540 N81-28104
Some applications of aerodynamic formulations to problems in aircraft dynamics
p0592 N81-31121
High lift technology
p0593 N81-31147
Automated Plasma Spray (APS) process feasibility study
[NASA-CR-165418] p0597 N81-31193
Improving turbine engine compressor performance retention through airfoil coatings
p0598 N81-31203
On the spanwise uniformity of wind tunnel test data of transonic airfoils
[NAL-TR-665] p0627 N81-32118

AIRFRAME MATERIALS

Flight simulation environmental fatigue crack propagation in 2024-T3 and 7475-T761 aluminium
p0013 A81-11657
Operational durability of airframe structures
p0014 A81-11662
Inspection methods for various critical steel parts for airframes
p0052 A81-13331
The certification of composite airframe structures
p0283 A81-27887
Fatigue strength of certain materials used in airframe construction --- glass-plastic reinforced epoxy resin
p0285 A81-28108
Design, fabrication and test of a complex helicopter airframe section
[SAE PAPER 801213] p0404 A81-34221
Industrial titanium alloys - Use and characteristics
p0416 A81-36653
The present and future applications of titanium alloys - Airframes, helicopters, missiles
p0417 A81-36665
New structural technologies for future fighters
p0450 A81-38805
Advanced composite airframe program - Preliminary design phase
[AHS 80-45] p0477 A81-40172
All composite helicopter airframe roof structure
[AHS 80-47] p0477 A81-40174
Titanium net shapes by a new technology. II - F-18A parts evaluation
p0511 A81-41650
Late 80's advanced rotary wing aircraft potential based on ATDE, ACAP, and ITR --- Advanced Technology Demonstrator Engine, Advanced Composite Airframe Program and Integrated Technology Rotor
p0580 A81-46612
Cast Aluminum Structures Technology (CAST). Technology transfer (phase 6)
[AD-A087492] p0030 N81-10152
Exploratory study of hazard mitigation and research in the air transport system
[AD-A089204] p0033 N81-11021
Air Force technical objective document FY 1981
[AD-A089709] p0048 N81-12010
Developments in aircraft structural materials
[NLR-MP-79042-U] p0077 N81-12061
Testing of composite structures
[AAAF-NT-79-41] p0083 N81-12181
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-165649] p0198 N81-16139
Supersonic Cruise Research 1979, part 2 --- airframe structures and materials, systems integration, economic analysis
[NASA-CP-2108-PT-2] p0246 N81-18005
Structural concept trends for commercial supersonic cruise aircraft design
p0246 N81-18006
Opportunities for structural improvements for an advanced supersonic transport vehicle
p0246 N81-18007
An assessment of buffer strips for improving damage tolerance
p0247 N81-18009
Evaluation of high-temperature structural adhesives for extended service
p0247 N81-18010
Aircraft wing weight build-up methodology with modification for materials and construction techniques
[NASA-CR-166173] p0387 N81-23068
Thirty years experience with primary adhesive bonded structures --- aircraft construction
[FOK-BO-1240] p0541 N81-28189
Anti-symmetric elastic properties of composite plates of satin weave cloth
[NAL-TR-649T] p0639 N81-33238

AIRFRAMES

Determination if fiber-optic immunity is adequate for deployment in the V/STOL airframe --- to compensate nonmetallic material LF transparency
p0057 A81-14265
Review of engine/airframe/drive train dynamic interface development problems
p0106 A81-17516
Engine-airframe transient compatibility - Analysis and test
p0106 A81-17517
Automatization of the adhesion process for supporting airframe parts in light contour systems
p0118 A81-19297
A look at comprehensive engine/airframe integration for high performance aircraft
p0298 A81-29118
Optimality criterion techniques applied to frames having nonlinear cross-sectional properties
[AIAA 81-0552] p0301 A81-29402
Classification of links of assembly units with respect to the character of their connections, and calculation of the accuracy of their execution --- in airframe construction
p0319 A81-30168
The structural weight fraction - Revisited for fighter/attack type aircraft
[SAWE PAPER 1365] p0353 A81-31387
ICAM 'Manufacturing Cost/Design Guide' /MC/DG/ --- Integrated Computer Aided Manufacturing for aircraft systems
[AIAA PAPER 81-0855] p0408 A81-34353
New method for cast superalloy frames - Segmented mold and HIP utilized
p0408 A81-34693
A new lightweight fighter
p0410 A81-35025
Trailing-edge airframe noise source studies on aircraft wings
[AIAA PAPER 80-0976] p0411 A81-35634
Effect of post buckling on the fatigue of composite structures
p0418 A81-37127
Coupled rotor/airframe vibration analysis by a combined harmonic-balance, impedance-matching method
[AHS 80-21] p0474 A81-40151
Aeroelastic stability analysis of hingeless rotor helicopters in forward flight using blade and airframe normal modes
[AHS 80-24] p0475 A81-40154
AMX - Italo-Brazilian bantam battler
p0518 A81-42630
Determination of crash test pulses and their application to aircraft seat analysis
[SAE PAPER 810611] p0522 A81-42767

Crashworthy design concepts for airframe structures of light aircraft [SAE PAPER 810513] p0522 A81-42769
Investigation of landing gear alternatives for high performance aircraft [AIAA PAPER 81-1639] p0525 A81-43139
Concurrent superplastic forming/diffusion bonding of titanium airframe components p0531 A81-43638
Development of airframe structural design loads prediction techniques for flexible military aircraft - Theoretical development [AIAA PAPER 81-1696] p0535 A81-43953
Development of airframe structural design loads prediction techniques for flexible military aircraft - Applications [AIAA PAPER 81-1697] p0535 A81-43954
Prediction of jet exhaust noise on airframe surfaces during flight [AIAA PAPER 81-2035] p0619 A81-48626
The effect of flight and the presence of an airframe on engine exhaust noise [AIAA PAPER 81-2029] p0623 A81-49727
The use of parametric cost estimating relationships as they pertain to aircraft airframes: A new perspective [AD-A089525] p0027 N81-10060
Bibliography on aerodynamics of airframe/engine integration of high-speed turbine-powered aircraft, volume 1 [NASA-TM-81814] p0035 N81-11032
Development of advanced interceptor substructural material --- graphite epoxy missile structures [AD-A090127] p0038 N81-11116
The electrical effects of joints and bonds in carbon fiber composites p0199 N81-16153
Supersonic cruise research aircraft structural studies: Methods and results p0246 N81-18008
Data base for the prediction of airframe/propulsion system interference effects [NASA-CR-152316] p0251 N81-18045
Application of a structural optimization procedure for advanced wings [AGARD-R-691] p0333 N81-20064
Advanced composite aircraft electromagnetic design and synthesis [AD-A096291] p0341 N81-21069
Crashworthiness design parameter sensitivity analysis [AD-A096550] p0374 N81-22041
Airframe noise of a small model transport aircraft and scaling effects --- Boeing 747 [NASA-TP-1858] p0380 N81-22832
Fuel/engine/airframe trade off study [AD-A097391] p0388 N81-23073
Technical evaluation report on the Fluid Dynamic Panel Symposium on Subsonic/Transonic Configuration/Aerodynamics [AGARD-AR-146] p0392 N81-23431
Structural Integrity Recording System (SIR) for U.S. Army AH-1G Helicopters [AD-A097283] p0393 N81-23438
A cost function for military airframes [AD-A097538] p0394 N81-23966
A cost function for an airframe production program [AD-A097540] p0394 N81-23967
Cooling system for high speed aircraft [NASA-CASE-LAR-12406-1] p0485 N81-26114
Combat damage assessment p0488 N81-26132
Explosively activated egress area [NASA-CASE-LAR-12624-1] p0546 N81-29107
Engineering effects of advanced composite materials on avionics [AD-A104015] p0640 N81-33240

AIRLINE OPERATIONS
Methods of fuel conservation in civil aviation. I p0005 A81-11322
Fuel saving methods in civil aviation. II p0059 A81-14755
The future ATC system as influenced by advanced avionics p0100 A81-16586
Airline flight departure procedures - Choosing between noise abatement, minimum fuel consumption and minimum cost p0101 A81-17044
Productivity - The challenge of aircraft and engine maintenance p0102 A81-17045
An overview - 1980 generation avionic developments p0111 A81-18061
Application of trajectory optimization principles to minimize aircraft operating costs p0155 A81-20466
Analysis of wind vector components in the lower troposphere Applications to aircraft operations at terminals [AIAA PAPER 81-0387] p0167 A81-20799
Economics of technological change - A joint model for the aircraft and airline industries p0169 A81-21010
Flight companies present new aircraft - Boeing 737-200 advanced --- aircraft characteristics and airline selection procedures p0171 A81-21575

Concorde with the airlines --- operating costs and performance p0247 N81-18013
Supersonic market and economic analyses p0248 N81-18020
SRDS Technical Program document. Fiscal year 1981. Research and Development approved projects [AD-A096293] p0339 N81-21050
Investigation of air transportation technology at Massachusetts Institute of Technology, 1980 p0371 N81-22000
Aviation safety: Hazardous materials handling [GPO-69-199] p0439 N81-25049
Airport activity statistics of certificated route air carriers [AD-A102355] p0602 N81-31236

AIRPLANE PRODUCTION COSTS
GASP- General Aviation Synthesis Program. Volume 7: Economics. Part 1: Theoretical development [NASA-CR-152303-VOL-7-PT-1] p0271 N81-19094

AIRPORT BEACONS
NT DISCRETE ADDRESS BEACON SYSTEM

AIRPORT LIGHTS
NT RUNWAY LIGHTS

Energy-saving ramp lighting with high-pressure sodium lamps
p0056 A81-14243
Airport visual approach, guidance and landing systems - Airline pilots viewpoint
p0114 A81-18083
Lighting systems for flight support --- Russian book
p0564 A81-45602
AIRPORT PLANNING
Airfield pavement demonstration-validation study
p0003 A81-10718
Atlanta's new central passenger terminal complex
p0003 A81-10719
Reduction of the take-off ground run distance to a given set of atmospheric condition
p0010 A81-11634
Prediction of changes in aircraft noise exposure
p0017 A81-11820
The outfitting of regional airports in the future with radio assistance for approach and landing, with emphasis on landing site obstacles for general aviation
p0051 A81-13313
Developing an emergency medical disaster plan for an airport
p0053 A81-13513
Mobilization of trauma teams for aircraft disasters
p0053 A81-13514
Passenger survival in wide-bodied jet aircraft accidents vs. other aircraft - A comparison
p0054 A81-13515
Airspace analysis in airport system planning
p0111 A81-18052
Introduction to a rigid pavement design procedure
p0111 A81-18054
Micro-wave landing system - An operational point of view
p0111 A81-18055
The introduction of STOL and RNAV to large commercial operations
p0111 A81-18057
New major U.S. airports - Capacity considerations
p0111 A81-18060
Community participation in airport planning
p0112 A81-18067
A new perspective in aviation systems planning
p0112 A81-18069
Canada's national aviation forecasting models
p0112 A81-18072
The federal role in airport noise control planning
p0113 A81-18073
Fully bonded concrete overlay for an airport runway
p0113 A81-18075
Investment decision-making in international airports
p0113 A81-18079
Increasing capacity with computer-assisted decision making --- airport planning
p0113 A81-18080
Design of the new Tehran International Airport
p0114 A81-18084
Modeling of the terminal area Air Traffic Management and Control
p0114 A81-18085
Airspace simulation in airport system planning
p0114 A81-18086
The importance of 'Interim Standard Microwave Landing System' for small community airports
p0114 A81-18087
Airport/environs plan making - Managing the planning process
p0114 A81-18088
Runway Configuration Management System concepts
p0114 A81-18089
Traffic forecasting for the NRIA --- New Riyadh International Airport
p0114 A81-18090
Environmental aspects of airport planning
p0115 A81-18091
Saudi Arabia's new Gateway Airports
p0115 A81-18093
Air traffic simulation as a validation tool
p0172 A81-21718
Maximizing the capacity of a single-runway airport
p0177 A81-22193
Wire communication systems and equipment at airports --- Russian book
p0289 A81-28745
Application of endfire arrays at contemporary glide-slope problem sites
p0360 A81-32695
An aircraft manufacturer's view of airport R&D needs
[AIAA PAPER 81-0793] p0368 A81-33887
Increasing capacity at Paris airports
[AIAA PAPER 81-0802] p0368 A81-33890
Airport capacity enhancement by innovative use of runway geometry
[AIAA PAPER 81-0801] p0368 A81-33891
Aircraft noise and land use compatibility tradeoff analyses
p0569 A81-46370
Airport Noise Control and Land Use Compatibility Studies A U.S. case
p0570 A81-46372
A long range research programme of noise abatement at the airport of Beograd and its practical results
p0570 A81-46373
Simulation model to evaluate maintenance strategies for large network of fielded systems
p0613 A81-48009
ATARS implementation tradeoff
[AD-A089977] p0034 N81-11026
Southern California aviation system study
[PB80-215544] p0125 N81-13916
A scheduling model for the aerial relay system
[NASA-CR-159387] p0249 N81-18032
Airport and airway system development act of 1981
[GPO-75-804] p0601 N81-31231
Upgraded FAA Airfield Capacity Model. Volume 1: Supplemental user's guide
[AD-A104154] p0639 N81-33216
Upgraded FAA Airfield Capacity Model. Volume 2: Technical description of revisions
[AD-A104155] p0639 N81-33217
AIRPORT SURFACE DETECTION EQUIPMENT
A supplementary EMC analysis of the proposed Airport Surface Detection Equipment (ASDE-3) radar
[AD-A092965] p0219 N81-17342
Visual confirmation of voice takeoff clearance (VICON) operational evaluation. Volume 2: Operations and maintenance manual
[AD-A098093] p0425 N81-24042
Detection performance evaluation of the ASDE-3 using fixed frequency and frequencyagile operation
[AD-A099513] p0499 N81-27372
AIRPORT TOWERS
New terminal radar approach control in tower cab concept for Love Field, Dallas, Texas
[AD-A089996] p0034 N81-11025
Test and evaluation of the Airport Surveillance Radar (ASR)-8 wind shear detection system (phase 2), revision
[AD-A090111] p0042 N81-11290
Consolidated car display: A summary report of the process and the results of the consolidation of critical and supplementary terminal area air traffic control information for display presentation
[AD-A092450] p0193 N81-16034
Air traffic control simulation models. Citations from the NTIS data base
[PB81-800104] p0207 N81-17037
Consolidated Cab Display (CCD) System, Project Planning Document (PPD)
[AD-A098651] p0440 N81-25056
New tower cab mockup for Philadelphia, Pennsylvania
[AD-A098528] p0440 N81-25060
AIRPORTS
NT HELIPORTS
Community response to noise from a general aviation airport
p0017 A81-11821
General aviation considerations on bad weather approaches at regional airports
p0052 A81-13315
Medical coordination in airport disasters
p0053 A81-13512
Carrier system simplifies freight handling - A new technical concept for Lufthansa's Frankfurt facility
p0056 A81-14281
International Air Transportation Conference, New Orleans, La., April 30-May 3, 1979, Proceedings. Volumes 1 & 2
p0110 A81-18051
Non-destructive pavement evaluation
p0111 A81-18062

Prestressed concrete airfield pavements
p0112 A81-18063
Runway rehabilitation, Washington National Airport
p0112 A81-18066
UK pavement design and evaluation - A new approach
p0113 A81-18076
Experimental investigation of orographic waves and vertical motions in the Krasnovodsk airport area
p0121 A81-19441
Aircraft pollution in the vicinity of airports
[AIAA PAPER 81-0309] p0164 A81-20743
New definition of areas of protection for instrument landing
p0225 A81-23869
An observational experiment using a monostatic sodar at the airport of Fiumicino
p0282 A81-27548
Federal policies affecting airport noise compatibility programs
[AIAA PAPER 81-0829] p0367 A81-33879
Fog dispersion
[SAE PAPER 801133] p0397 A81-34164
Wind shear detection - Automatic alerting system for airport applications
p0412 A81-35771
Simulation model validation - Airport applications
p0461 A81-39320
Airports and earthquakes - An important subject often ignored
p0482 A81-40750
The influence of aircraft operations on air quality at airports
p0553 A81-44074
Integrated noise model - The Federal Aviation Administration's computer program for predicting noise exposure around an airport
p0568 A81-46354
Airport noise control in the 1980s - FAA's plans and policies
p0568 A81-46355
Model for airport noise exposure on a national basis - 1960 to 2000
p0568 A81-46363
Noise control at general aviation airports
p0569 A81-46366
Airport noise contour predictions - Improving their accuracy
p0569 A81-46367
Optimizing complex runway use programs for airport noise abatement
p0569 A81-46369
The impact and future direction of aircraft noise certification
p0570 A81-46377
Determination of cargo container inventories through logistics simulation --- for air shipment
p0616 A81-48380
Unrepresentative temperatures at a first-order meteorological station Washington National Airport
p0622 A81-48847
NASA Aviation Safety Reporting System
[NASA-TM-81225] p0023 N81-10021
Hourly airport activity profiles: 30 Airports by user, 3 airports by user and equipment type, selected days in June, July and August, 1978
[AD-A089450] p0024 N81-10031
Analysis of potentially correctable landing delays at Atlanta
[AD-A089408] p0024 N81-10032
Airfield pavement evaluation. Citations from the NTIS data base

Airship survivability in atmospheric turbulence
[AIAA 81-1323] p0456 A81-38533

The Shenandoah flies again - A computer simulation
[AIAA 81-1325] p0456 A81-38534
Predictive steering control of dirigibles using the switching curve approach
[AIAA 81-1327] p0456 A81-38535
Bulkheads in airships
[AIAA 81-1328] p0456 A81-38536
Design and development of a thermal airship
[AIAA 81-1330] p0456 A81-38537
Quasi-hybrid airships
[AIAA 81-1333] p0456 A81-38538
Low cost start-up for rigid-pressure airship
[AIAA 81-1337] p0457 A81-38541
Aerodynamic estimation techniques for aerostats and airships
[AIAA 81-1339] p0457 A81-38542
Prospects for the employment of dirigibles in the 1980s
p0565 A81-45763
Civil markets for buoyant heavy-lift vehicles
[NASA-TM-81270] p0248 N81-18023
Vehicle concepts and technology requirements for buoyant heavy-lift systems
[NASA-TP-1921] p0596 N81-31185

AIRSPACE
Airspace analysis in airport system planning
p0111 A81-18052
The use of airspace - One way to save fuel
p0364 A81-33150
Study of heliport airspace and real estate requirements
[AD-A091156] p0095 N81-13072
The FAA plans and programs for the future airport and air traffic control system
[AD-A100370] p0537 N81-28077
Development of a heliport classification method and an analysis of heliport real estate and airspace requirements
[AD-A102521] p0630 N81-32158

AIRSPEED
A method of helicopter low airspeed estimation based on measurement of control parameters
[MBB-UD-276-79-O] p0018 A81-12094
An airspeed vector sensor for V/STOL aircraft
[AIAA 80-1938] p0052 A81-13364
Optimization of airplane time to reach a given flight altitude and speed
p0235 A81-25685
Measurement of aircraft speed and altitude --- Book
p0357 A81-32401
The problem of the minimum-time turn of a maneuverable aircraft velocity vector to a specified course angle
p0413 A81-36472
Simulation of Heavy Lift Airship dynamics over large ranges of incidence and speed
[AIAA 81-1335] p0457 A81-38540
Flight investigations of a helicopter low airspeed estimation system based on measurement of control parameters
p0470 A81-40111
The influence of the airspeed on jet turbulence and the consequences for the jet noise
[DGLR PAPER 81-021] p0609 A81-47595
Effects on inlet technology on cruise speed selection
p0245 N81-17998
Wind shear systems implementation plan, benefit/cost study
[AD-A094168] p0253 N81-18055
Low-range airspeed sensors
[AD-A096359] p0342 N81-21076
Dead reckoner navigation project
p0372 N81-22010
Laser Doppler airspeed and altitude sensor
[AD-A096980] p0375 N81-22049
Groundspeed/airspeed differences as a wind shear indicator and flight evaluation of a DME-derived system to determine groundspeed
[AD-A097566] p0393 N81-23768
Subsonic tests of an all-flush-pressure-orifice air data system
[NASA-TP-1871] p0489 N81-26144
Flight investigations of a helicopter low airspeed estimation system based on measurement of control parameters --- hingeless rotor helicopters
[MBB-UD-306/80-OE] p0584 N81-30139
Development of an instrument for the accurate measurement of aircraft airspeed and altitude
[AD-A103421] p0638 N81-33204

ALUMINUM
Cast Aluminum Structures Technology (CAST). Technology transfer (phase 6)
[AD-A087492] p0030 N81-10152
Lightning protection considerations for graphite/epoxy aircraft structure
p0040 N81-11142

ALUMINUM ALLOYS
Flight simulation environmental fatigue crack propagation in 2024-T3 and 7475-T761 aluminium
p0013 A81-11657
Prediction methods for fatigue crack growth in aircraft material
p0118 A81-18777
Effect of gust load alleviation on fatigue and crack growth in ALCLAD 2024-T3
p0172 A81-21739
Ductile fracture mechanic assessments of 2219-T851, 2024-T3 and 7075-T6 aluminum alloys
p0180 A81-22628
Comparison of 2024 and 7475 aluminum alloy sheet for tension-critical aircraft structures
p0232 A81-24942
Tensile stress/strain characterization of non-linear materials
p0348 A81-30915
Thermomechanical behavior of a mechanically alloyed Al-4.0Mg powder alloy
p0409 A81-34851
Selection of notch geometry and notching technique for studying the fracture toughness of materials and full-scale structures --- of Al alloys
p0516 A81-42356
Advanced aluminum metallic materials and processes for application to naval aircraft structures
p0531 A81-43637
Metallographic analysis techniques used during the Cast Aluminum Structures Technology /CAST/ program --- microstructure of aluminum cast alloy
p0531 A81-43650
Flight simulation environmental fatigue crack propagation in 2024-T3 and 7475-T761 aluminum --- wing panels for transport aircraft
[NLR-MP-80003-U] p0043 N81-11415
Developments in aircraft structural materials
[NLR-MP-79042-U] p0077 N81-12081
Flight simulation environmental fatigue crack propagation in 2024-T3 and 7475-T761 aluminum
[NLR-MP-80003-U] p0086 N81-12477
Tension induced in the cables inside closed metal structures and in carbon epoxy submitted to a lightning-type impulse current
p0200 N81-16150
Flame tube and ballistic evaluation of Explosafe aluminum foil for aircraft fuel tank explosion protection --- suppressing combustion overpressure
[AD-A093542] p0208 N81-17046
Design and fabrication of a stringer stiffened discrete-tube actively cooled panel for a hypersonic aircraft
[NASA-CR-3403] p0279 N81-19484
Effects of geometric variables on rub characteristics of Ti-6Al-4V
[NASA-TP-1835] p0336 N81-20245
Service evaluation of aluminum-brazed titanium (ABTi) --- aircraft structures
[NASA-CR-3418] p0378 N81-22129
Fatigue life variability in aluminum alloy aircraft structures
[AD-A097198] p0391 N81-23249
Fatigue properties of adhesive-bonded laminated sheet material of aluminum alloys
[VTH-LR-276] p0542 N81-28489
Fatigue crack growth in 7475-T7651 material under flight simulation loading. Information from a Douglas report --- effect of transport/bomber loads spectrum on crack growth
[VTH-M-392] p0542 N81-28493

ALUMINUM BORON COMPOSITES
Boron aluminum blades and vanes
[AIAA PAPER 81-1359] p0502 A81-40840
Fabrication process development of boron/aluminum fan blades for high bypass engines
[NASA-CR-165252] p0442 N81-25076

ALUMINUM COATINGS
Mechanical properties of aluminum coatings on heat-resistant steels
p0355 A81-31668

A process for protecting gas turbine blade cooling passages against degradation
p0622 A81-49209
Aluminized coding study for retrofitting in-service slide materials
[AD-A094170] p0255 N81-18201
ALUMINUM COMPOUNDS
Turbine airfoil coating refurbishment

ANGLE OF ATTACK
Dynamic stability parameters at high angles of attack
p0009 A81-11624
Review of numerical methods for the problem of the supersonic flow around bodies at angle of attack
p0011 A81-11639
Optimum subsonic, high-angle-of-attack nacelles
p0012 A81-11646
Laminar boundary layer on swept-back wings of infinite span at an angle of attack
p0107 A81-17656
Characteristics of the velocity field near a wing-body combination located at an angle of attack to an oncoming supersonic flow
p0119 A81-19337
Hypersonic gas flow over a delta wing
p0123 A81-19632
Angle of attack - Its measurement and usage. I
p0149 A81-19799
Delta canard configuration at high angle of attack
p0154 A81-20351
Laser measurement of angle of attack on wind-tunnel models
p0154 A81-20419
Experimental study of the influence of supports on the aerodynamic loads on an ogive cylinder at high angles of attack
[AIAA PAPER 81-0007] p0156 A81-20531
Wing-alone aerodynamic characteristics at high angles of attack
[AIAA PAPER 81-0008] p0157 A81-20532
Hinged strakes for enhanced maneuverability at high angles of attack
[AIAA PAPER 81-0357] p0165 A81-20776
An approximate analytical method for vortex-lift and centre of pressure on the slender wing
p0223 A81-23726
Slightly blunted cone in a supersonic flow at angle of attack
p0225 A81-23908
Investigation of instantaneous distortions in air intakes at high angles of attack
[AAAF PAPER NT 80-38] p0369 A81-33931
Some characteristics of aircraft motion at large angles of attack
p0414 A81-36473
An apparatus for the simulation of an air intake at high angle of attack in a compressor test facility
[ONERA, TP NO. 1981-35] p0460 A81-39238
Stability characteristics of a forward swept wing aircraft at high angles of attack
[AIAA PAPER 81-1884] p0561 A81-44576

Stability of aircraft motion in critical cases [AIAA PAPER 81-1885] p0561 A81-44577

Influence of sideslip on the kinematics of the helicopter in steady coordinated turns p0576 A81-46644

Low-speed aerodynamic characteristics of a 13 percent thick medium speed airfoil designed for general aviation applications [NASA-TP-1498] p0071 N81-12015

Experimental and theoretical aerodynamic characteristics of two hypersonic cruise aircraft concepts at Mach numbers of 2.96, 3.96, and 4.63 [NASA-TP-1767] p0072 N81-12021

Dynamic response of a forward-swept-wing model at angles of attack up to 15 deg at a Mach number of 0.8 --- Langley transonic dynamics tunnel tests [NASA-TM-81863] p0085 N81-12448

Aerodynamic side-force alleviator means [NASA-CASE-LAR-12326-1] p0139 N81-14968

Effects of angle of attack and ventral fin on transonic flutter characteristics of an arrow-wing configuration [NASA-TM-81914] p0145 N81-15397

Unsteady wakes downstream from a profile oscillating in incidence --- aerodynamic flow tests on helicopter rotor blade profiles [AAAF-NT-80-10] p0204 N81-16989

Calculation of airloads for a flexible wing via NASTRAN [AD-A094770] p0263 N81-19031

Kinematic properties of the helicopter in coordinated turns [NASA-TP-1773] p0374 N81-22039

Wind tunnel corrections for high angle of attack models [AGARD-R-692] p0435 N81-24120

Canadian studies of wind tunnel corrections for high angle of attack models p0435 N81-24121

A review of the wall pressure signature and other tunnel constraint correction methods for high angle-of-attack tests p0435 N81-24122

Expected improvements on high angle of attack model testing p0436 N81-24123

German activities on wind tunnel corrections p0436 N81-24124

A review of research at NLR on wind-tunnel corrections for high angle of attack models p0436 N81-24125

A review of some investigations on wind tunnel wall interference carried out in Sweden in recent years p0436 N81-24126

Wind tunnel corrections for high angles of attack: A brief review of recent UK work p0436 N81-24127

Strake/delta wing interactions at high angles of attack [NASA-CR-166183] p0483 N81-26072

TORNADO: Flight characteristics at high angles of incidence [MBB-FE-127/S/PUB/23] p0495 N81-27085

Wing-alone aerodynamic characteristics for high angles of attack of supersonic speeds [NASA-TP-1889] p0579 N81-30087

Investigation of high-angle-of-attack maneuver-limiting factors. Part 1: Analysis and simulation --- F-4J and F-14A aircraft [AD-A101646] p0581 N81-30113

Investigation of high-angle-of-attack maneuver-limiting factors. Part 2: Piloted simulation assessment of Bihrle departure criteria [AD-A101647] p0581 N81-30114

Investigation of high-angle-of-attack maneuver-limiting factors. Part 3: Appendices, aerodynamic models [AD-A101648] p0581 N81-30115

Estimation of dynamic stability parameters from drop model flight tests p0591 N81-31116

Basic studies of body vortices at high angles of attack and supersonic speeds [AD-A102241] p0594 N81-31154

Automated pilot advisory system test and evaluation at Manassas Municipal Airport
p0264 N81-19040
A head-up display format for transport aircraft approach and landing
p0265 N81-19043
An investigation of reports of Controlled Flight Toward Terrain (CFTT)
[NASA-CR-166230] p0546 N81-29108
Minimum fuel horizontal flightpaths in the terminal area
[NASA-TM-81313] p0549 N81-29133
Takeoff and missed approach under the influence of wind shear --- flight safety considerations
[TUBS/SFB-58-80-05-01] p0628 N81-32131
APPROACH AND LANDING TESTS (STS)
Flight evaluation of stabilization and command augmentation system concepts and cockpit displays during approach and landing of powered-lift STOL aircraft
[NASA-TP-1551] p0037 N81-11044
Comparison of theoretical predictions of orbiter airloads with wind tunnel and flight test results for a Mach number of 0.52
[NASA-TM-81358] p0387 N81-23066
Analyses of shuttle orbiter approach and landing conditions
[NASA-CR-163108] p0498 N81-27113
APPROACH CONTROL
NT RADAR APPROACH CONTROL
The outfitting of regional airports in the future with radio assistance for approach and landing, with emphasis on landing site obstacles for general aviation
p0051 A81-13313
Specifications for short instrument and precision approach path trajectories
p0051 A81-13314
General aviation considerations on bad weather approaches at regional airports
p0052 A81-13315
Flight instrumentation requirements for all-weather approach and landing
p0111 A81-18059
Airport visual approach, guidance and landing systems - Airline pilots viewpoint
p0114 A81-18083
The importance of 'Interim Standard Microwave Landing System' for small community airports
p0114 A81-18087
Flight test evaluation of a digital controller used in a VTOL automatic approach and landing system
p0179 A81-22549
Increasing capacity at Paris airports
[AIAA PAPER 81-0802] p0368 A81-33890
Evaluation of several control/display concepts for V/STOL shipboard landing
[SAE PAPER 801205] p0403 A81-34213
Development of simplified airborne computations for fuel conservative descents in a time-based

metered air traffic environment
[SAE PAPER 810642] p0524 A81-42785
Flight test evaluation of advanced symbology for general aviation approach to landing displays
[AIAA PAPER 81-1643] p0526 A81-43142
Analysis of the function principle and operational assessment of an onboard glidepath guidance system for visual approaches (Visual Approach Monitor (VAM)
[DFVLR-FB-79-38] p0025 N81-10043
Flight evaluation of the terminal guidance system
[NASA-CR-163859] p0142 N81-14991
Applicated techniques for the control of approach traffic
[DFVLR-MITT-79-20] p0142 N81-14992
Guidance and control system research for improved terminal area operations --- terminal controlled vehicle
p0264 N81-19038
Operational considerations in utilization of microwave landing system approach and landing guidance --- terminal configured vehicle
p0264 N81-19039
Flight-test evaluation of STOL control and flight director concepts in a powered-lift aircraft flying curved decelerating approaches
[NASA-TP-1641] p0275 N81-19131
Operational considerations in utilization of microwave landing system approach and landing guidance
[NASA-TM-81945] p0331 N81-20050
Definition of a system concept study for future air traffic guidance
[BMFT-FB-W-80-008] p0425 N81-24046
Applied techniques for the control of approach traffic --- air traffic control
[ESA-TT-668] p0538 N81-28079
Flight evaluation of the STOL flare and landing during night operations
[NASA-TM-81312] p0629 N81-32151

APPROACH INDICATORS
A head-up display for low-visibility approach and landing

Aircraft electricity and electronics /3rd edition/ --- Book
p0624 A81-49877
Recommended short-term ATC improvements for helicopters. Volume 2: Recommended helicopter ATC training material
[AD-A089441] p0024 N81-10029
Head up displays. Citations from the NTIS data base
[PB80-809064] p0026 N81-10050
Optimized computer systems for avionics applications
[AD-A089570] p0028 N81-10063
Summary of Federal Aviation Administration responses to National Transportation Safety Board safety recommendations
[AD-A089971] p0033 N81-11022
Failure management techniques for high survivability
p0042 N81-11272
Microcomputer array processor system --- design for electronic warfare
p0044 N81-11673
Estimation of relative total cost for aircraft systems
p0047 N81-11922
Summary of AGARD Lecture Series 100: Methodology for control of life cycle costs for avionics systems
p0047 N81-11924
The role of advanced technology of turbine engine life cycle cost
p0047 N81-11927
Ring laser gyro
[AD-A090643] p0085 N81-12395
An assessment of General Aviation utilization of advanced avionics technology
[NASA-CR-159328] p0127 N81-13941
DC-to-DC power supply for light aircraft flight testing
[NASA-CR-163850] p0141 N81-14989
A survey of new technology for cockpit application to 1990's transport aircraft simulators
[NASA-CR-159330] p0142 N81-14993
Validation Methods Research for Fault-Tolerant Avionics and Control Systems Sub-Working Group Meeting. CARE 3 peer review
[NASA-CP-2167] p0146 N81-15702
A feasibility study for advanced technology integration for general aviation
[NASA-CR-159381] p0185 N81-15974
Preliminary Airworthiness Evaluation (PAE 1) of the YCH-47D helicopter
[AD-A092633] p0194 N81-16046
A survey of computer simulations of digital avionics systems
[AD-A091943] p0195 N81-16049
Annual report to the NASA Administrator by the Aerospace Safety Advisory Panel on the space shuttle program. Part 2: Summary of information developed in the panel's fact-finding activities
[NASA-TM-82252] p0198 N81-16114
Tension induced in the cables inside closed metal structures and in carbon epoxy submitted to a lightning-type impulse current
p0200 N81-16158
Functional testing communication equipment (avionics)
[AD-A092825] p0201 N81-16375
Operational problems associated with head-up displays during instrument flight
[AD-A092992] p0210 N81-17058
Environmental burn-in effectiveness
[AD-A093307] p0211 N81-17060
Analysis and modeling of information handling tasks in supervisory control of advanced aircraft
[AD-A092906] p0211 N81-17061
Assessment of risk to Boeing commerical transport aircraft from carbon fibers --- fiber release from graphite/eprxoy materials
[NASA-CR-159211] p0218 N81-17171
The 1980 Aircraft Safety and Operating Problems, part 2
[NASA-CP-2170-PT-2] p0267 N81-19056
Predicting cost/reliability/maintainability of advanced general aviation avionics equipment
[NASA-CR-152149] p0273 N81-19111
V/STOL AND digital avionics system for UH-1H
[NASA-CR-152179] p0273 N81-19112
Integrated strike avionics study, volume 1
[AD-A094705] p0273 N81-19113
General Aviation Avionics Statistics
[AD-A095148] p0273 N81-19114
Estimation and statistical averaging applied to redundant strapped down inertial sensors for navigation and flight control
[AD-A094465] p0276 N81-19133
Initial design and experimental implementation of the traffic advisory service of ATARS
[AD-A095462] p0331 N81-20055
The P/POD project: Programmable/Pilot Oriented Display --- general aviation aircraft
p0371 N81-22004
V/STOLAND digital avionics system for XV-15 tilt rotor
[NASA-CR-152320] p0375 N81-22047
Navaids calibration evaluation with a computer-controlled avionics data acquisition system
p0383 N81-23020
Demonstration Advanced Avionics System (DAAS) functional description --- Cessna 402B aircraft
[NASA-CR-152405] p0389 N81-23080
General Aviation Activity and Avionics Survey
[AD-A097604] p0389 N81-23081
NAVAIR Avionics Master Plan
[AD-A097522] p0389 N81-23082
Groundspeed/airspeed differences as a wind shear indicator and flight evaluation of a DME-derived system to determine groundspeed
[AD-A097566] p0393 N81-23768
Requirements, technology and configuration evaluation for Crash Survivable Flight Data Recording (CSFDR) system
[AD-A097863] p0427 N81-24059
Power system control study. Phase 1: Integrated control techniques. Phase 2: Detail design and system modeling
[AD-A099894] p0497 N81-27100
AFSC Standarization Conference, 1553, 1589, 1750, 1760, Ada. Volume 1: Proceedings

CASCADE CONTROL
   Practical gust load alleviation and flutter suppression control laws based on a LQG methodology --- Linear Quadratic Gaussian
   [AIAA PAPER 81-0021]   p0158 A81-20544
CASCADE FLOW
   The performance of slotted blades in cascade
      p0002 A81-10632

   Effect of surface roughness over the blade in compressor cascade
      p0060 A81-14924

   Choking effects in the blade rows of turbomachines
      p0061 A81-15269

   Variational principles and generalized variational principles for the hybrid aerodynamic problem of airfoil cascades on an arbitrary stream sheet of revolution
      p0107 A81-17741

   An aerodynamic design method for transonic axial flow compressor stage
      p0108 A81-17805

   Numerical solution of transonic flow through a cascade with slender profiles
      p0170 A81-21197

   Eddy viscosity in accelerated and retarded cascade-wake flows
      p0233 A81-25267

   Subsonic cascade flow analysis by a finite element method
      p0233 A81-25311

   Aerodynamic calculation of turbine stator cascades with curvilinear leaned blades and some experimental results
      p0293 A81-29072

   Numerical computation of compressible steady cascade flows
      p0296 A81-29100

   The axial velocity density ratio and the axial velocity density distribution in axial flow compressors and cascades
      p0296 A81-29101

   Evaluation of blade element performance of compressor rotor blade cascades in transonic and low supersonic flow range
      p0296 A81-29102

   The accuracy of mean-stream-line method in subsonic and transonic regions
      p0296 A81-29105

   Analysis of turbulent boundary layer on cascade and rotor blades of turbomachinery
      p0296 A81-29106

   Turbine blade construction of multistage axial-flow compressors
      p0309 A81-29850

   Stalling pressure rise capability of axial flow compressor stages
   [ASME PAPER 81-GT-3]   p0310 A81-29928
   Finite element methods for transonic blade-to-blade calculation in turbomachines
   [ASME PAPER 81-GT-5]   p0310 A81-29930
   Inverse or design calculations for non-potential flow in turbomachinery blade passages
   [ASME PAPER 81-GT-78]   p0314 A81-29986
   The present role of high speed cascade testing
   [ASME PAPER 81-GT-95]   p0314 A81-30002
   New features in the design of axial-flow compressors with tandem blades
   [ASME PAPER 81-GT-113]   p0315 A81-30017
   New correlations of the two-dimensional turbine cascade aerodynamic performance
   [ASME PAPER 81-GT-128]   p0316 A81-30032
   A time marching finite volume method for blade-to-blade flows using a body-fitted curvilinear mesh
      p0347 A81-30717

   Study of the secondary flow in the downstream of a moving blade row in an axial flow fan
      p0355 A81-31767

   Description of the warm core turbine facility and the warm annular cascade facility recently installed at NASA Lewis Research Center
   [SAE PAPER 801122]   p0396 A81-34158
   Inlet distortion and blade vibration in turbomachines
      p0421 A81-37631

   Numerical experiments on unsteady flows through vibrating cascades
      p0613 A81-47961

   On the numerical analysis of stall flutter in turbine cascade
      p0613 A81-47963

   Force and moment coefficients for high deflection cascades
   [CUED/A-TURBO/TR-98]   p0090 N81-13021
   Experimental determination of unsteady blade element aerodynamics in cascades. Volume 2: Translation mode cascade
   [NASA-CR-165166]   p0140 N81-14976
   Supersonic stall flutter of high speed fans --- in turbofan engines
   [NASA-TM-81613]   p0140 N81-14978
   Solution of plane cascade flow using improved surface singularity methods --- application of panel method to internal aerodynamics
   [NASA-TM-81589]   p0140 N81-14979
   Full potential solution of transonic quasi-3-D flow through a cascade using artificial compressability
   [NASA-TM-81637]   p0140 N81-14980
   Prediction of particle paths for flow of a gas/solids suspension through a cascade of flat plates
      p0256 N81-18352

   Design of turbine cascades with transitional profile boundary layers
      p0278 N81-19456

   Aerodynamics of advanced axial-flow turbomachinery
   [NASA-CR-163995]   p0335 N81-20079
   Rig investigation of a two stage single shaft low cost turbine
      p0432 N81-24099

   Cascade design through an inverse method
      p0448 N81-26022

CASCADE WIND TUNNELS
   Transonic cascade wind tunnel modification and initial tests
   [AD-A091080]   p0090 N81-13031
   Gravimetric investigation of the particle number density distribution function in the high speed cascade wind tunnel for laser anemometry measurements
   [ESA-TT-625]   p0197 N81-16069
   Evaluation of a subsonic cascade wind tunnel for compressor blade testing
   [AD-A093591]   p0218 N81-17107
CASCADES (FLUID DYNAMICS)
 U FLUID DYNAMICS
CASCODE MOSFET

CASE HISTORIES
   The technical contributions of the Wright brothers to aviation
      p0056 A81-14388

   A case study on the F-16 fly-by-wire flight control system --- Book
      p0101 A81-16719

   The high-speed airfoil program
      p0185 N81-15970

   Transonic wind tunnel development (1940 - 1950)
      p0185 N81-15971

   The high-speed propeller program
      p0185 N81-15972

   High-speed cowlings, air inlets and outlets, and internal-flow systems
      p0185 N81-15973

CASES (CONTAINERS)
 NT ROCKET ENGINE CASES
CAST ALLOYS
   New method for cast superalloy frames - Segmented mold and HIP utilized
      p0408 A81-34693

   Use of segmented mold process to produce large superalloy engine castings
   [AIAA PAPER 81-1404]   p0503 A81-40861
   An evaluation of vacuum centrifuged titanium castings for helicopter components
      p0510 A81-41516

Structural applications for titanium castings
p0510 A81-41637
Metallographic analysis techniques used during the Cast Aluminum Structures Technology /CAST/ program --- microstructure of aluminum cast alloy
p0531 A81-43650
Cast Aluminum Structures Technology (CAST). Technology transfer (phase 6)
[AD-A087492] p0030 N81-10152
CASTING
NT CENTRIFUGAL CASTING
NT SLIP CASTING
Metallurgical aspects of materials processing and manufacturing for aero-engine components --- gas turbine engines
[PNR-90019] p0080 N81-12209
CASTINGS
Quality control of precision castings for turbojet engine parts
p0052 A81-13330
CATALYSTS
Hydrogen fueled catalytic combustion for low thrust expendable turbojet engine
[AIAA PAPER 81-1715] p0527 A81-43165
CATALYTIC ACTIVITY
Proceedings of the 4th Workshop on Catalytic Combustion
[PB81-176067] p0508 N81-30700
CATAPULTS
F/A-18A Initial Sea Trials
p0450 A81-30857
Laboratory studies of flight mechanics using catapult launched models
[AAAF-NT-80-15] p0210 N81-17055
CATEGORIES
Current aircraft survey (approach speeds, gross weights, and Dimensions)
[PB80-225691] p0129 N81-13956
CATHODE RAY TUBES
Development of a shadow mask type high-resolution color picture tube for cockpit display
p0183 A81-23095
Application of CRT displays to new generation aircraft
p0286 A81-28297
F/A-18 horizontal situation display
p0327 A81-30353
Application of CRT displays to the cockpit of tomorrow
[SAE PAPER 801168] p0399 A81-34163
Impact of EFIS on navigation --- Electronic Flight Instrument System
p0517 A81-42835
New visual displays for the next generation of civil aircraft
p0556 A81-44299
Advancement on visualization techniques
[AGARD-AG-255] p0211 N81-17063
Cathode ray tubes and plasma panels as display devices for aircraft displays
p0212 N81-17069
An advanced electronic cockpit instrumentation system: The coordinated cockpit display
p0213 N81-17074
Development of instrumentation for pilots. CRT screens
[SNIAS-802-111-114] p0420 N81-24061
High contrast CRT module
[AD-A097727] p0437 N81-24360
CAVITATION
U CAVITATION FLOW
CAVITATION FLOW
Reduction of profile drag by blowing out through peg holes in areas of streamline separation bubbles
[DGLR PAPER 80-103] p0120 A81-19392
CAVITIES
Weapon bay cavity noise environments, data correlation and prediction for the B-1 aircraft
[AD-A069770] p0045 N81-11778
CCD
U CHARGE COUPLED DEVICES
CEILINGS (ARCHITECTURE)
Emergency cabin lighting installations: An analysis of ceiling- versus lower cabin-mounted lighting during evacuation trials --- visibility
[AD-A103191] p0636 N81-33175
CELESTIAL NAVIGATION
NT ASTRONAVIGATION
Automated celestial position determination
p0557 A81-44324
An analytical solution of the two star sight problem of celestial navigation
p0614 A81-48121
CELLULAR MATERIALS (NON BIOLOGICAL)
U FOAMS
CEMENTS
Polymer research in rapid runway repair materials
[AD-A089606] p0030 N81-10068
Shrinkage-compensating cement for airport pavement. Phase 3: Fibrous concretes. Addendum
[AD-A092945] p0219 N81-17299
Porous portland cement concretes: The state of the art
[AD-A098177] p0438 N81-24187
Recycling of Portland Cement Concrete airport pavements: A state-of-the-art study
[AD-A101482] p0588 N81-30181
CEMS SYSTEMS
U CENTRAL ELECTRONIC MANAGEMENT SYSTEMS
CENTER OF GRAVITY
Influence of zero-lift downwash on the relation between minimum-drag center-of-gravity position and inherent stability boundary
p0230 A81-28440
Operational responses to aft empty C.G. --- Center of Gravity location in Boeing 727-200 aircraft
[SAWE PAPER 1338] p0352 A81-31378
A flight test real-time 68-C4 computing system
p0361 A81-32660
CENTRAL ELECTRONIC MANAGEMENT SYSTEMS
AIRCAT 500 ATC systems for Australia and Mexico
p0487 A81-34229
CENTRAL PROCESSING UNITS
A Single Processor Synchronous Executive derived from the DAIS executive --- Digital Avionics Information System
p0328 A81-30326
An economical approach to automated flight test data reduction
p0576 A81-46643
CENTRIFUGAL CASTING
An evaluation of vacuum centrifuged titanium castings for helicopter components
p0510 A81-41516
CENTRIFUGAL COMPRESSORS
Comparative performance of two centrifugal fan impellers differing in blade section
p0001 A81-10162
Particulate flow in centrifugal compressors used in helicopters
p0287 A81-29109
Effects of Coriolis on the turbulent field inside centrifugal impellers
p0287 A81-29110
A method of performance prediction for centrifugal compressors. Part 1: Analysis. Part 2: Comparison with experiment
[ARC-R/M-3843] p0031 N81-10436
Model 250-C30/C28B compressor development
p0219 N81-17466
Centrifugal compressors for small aero and automotive gas turbine engines
p0220 N81-17467
VR34-8 performance improvement program. The VR34-8 gas turbine compressor test
[AD-A098293] p0429 N81-24069
CENTRIFUGAL PUMPS
Inlet flow in centrifugal pumps at partial deliveries
[VKI-PREPRINT-1979-16] p0031 N81-10437
Reverse flow, pre-rotation and unsteady inlet flow in centrifugal pumps
[VKI-PREPRINT-1979-15] p0063 N81-12433
CENTRIFUGES
Development of a flight simulation capability in the dynamic environment simulator
[AIAA 81-0976] p0613 A81-38586
Axial flow compressors. Citations from the Engineering Index data base
[PB80-808611] p0420 N81-10934
CENTRIFUGING STRESS
TELS - A facility to observe the effect of simulated flight maneuver loads on turbine engines
[AIAA PAPER 81-1591] p0508 A81-40966
CERAMIC PROTECTIVE COATINGS
U PROTECTIVE COATINGS

CERAMIC COATINGS
Ceramic applications in turbine engines --- for improved component performance and reduced fuel usage
[NASA-CR-159865] p0274 N81-19118
Thermal and flow analysis of a convection air-cooled ceramic coated porous metal concept for turbine vanes
[NASA-TM-81749] p0376 N81-22056

CERAMIC HONEYCOMBS
Improved ceramic heat exchanger materials
[NASA-CR-159678] p0132 N81-14082

CERAMICS
Analysis and design of a ceramic nozzle insert for the Langley 8-foot high temperature structures tunnel
p0060 A81-14996
Design analysis of high-efficiency low-stress ceramic gas turbines
[ASME PAPER 81-GT-130] p0316 A81-30034
Blade tip ceramic outer air seal for long life turbine engines
[AIAA PAPER 81-1440] p0504 A81-40874
Improved ceramic heat exchanger materials
[NASA-CR-159678] p0132 N81-14082
Ceramic and coating applications in the hostile environment of a high temperature hypersonic wind tunnel --- Langley 8-foot high temperature structures tunnel
[NASA-TM-81931] p0254 N81-18199
Development of gas turbine components, using silicon nitride --- forming techniques
[BMFT-FB-T-79-152] p0275 N81-19129
Structures and Materials Panel
[AD-A089019] p0378 N81-22420

CERTIFICATION
History of flight testing the L-1011 Tristar jet transport. I - The L-1011-1
p0110 A81-17976
Methods for the verification and validation of digital flight control systems
[SAE PAPER 801134] p0397 A81-34165
Comparison of predicted engine core noise with proposed FAA helicopter noise certification requirements
p0454 A81-38062
On certification of composite structures for USAF aircraft
[AIAA PAPER 81-1686] p0527 A81-43158
Comparison of predicted engine core noise with current and proposed aircraft noise certification requirements
[AIAA PAPER 81-2053] p0620 A81-48635
Flight termination receiver/decoders design, performance and certification
[AD-A089746] p0037 N81-11045
New materials and helicopter certification --- exigencies of certification regulation
[AAAF-NT-79-26] p0210 N81-17052
Development and evaluation of automatic landing control laws for power lift STOL aircraft
[NASA-CR-152399] p0253 N81-18060
Improving aircraft safety
[PB81-114886] p0270 N81-19083
Comparison of predicted engine core noise with proposed FAA helicopter noise certification requirements
[NASA-TM-81739] p0381 N81-22839
Rotorcraft aviation icing research requirements: Research review and recommendations
[NASA-CR-165344] p0388 N81-23070
Overview of all civil aviation engine certification/demonstration requirements and rationale, i.e., FAA, CAA, etcetera
p0429 N81-24072
Certification procedure for military engines in Germany
p0429 N81-24074

The future cockpit of the next generation of civil aircraft
p0010 A81-11630
A theoretical and practical design investigation of the future military cockpit
p0010 A81-11631
Flight management systems - Central ingredient of the 1980's avionics shipset
[SAE PAPER 800626] p0063 A81-15342
The FFCC cockpit of the A310 is practically defined
p0063 A81-15623
Rate-field displays --- cockpit devices
p0064 A81-15682
757/767 design considerations for improved productivity
p0100 A81-16584
A cockpit view of advanced airline avionics
p0100 A81-16585
The role of aircraft separation assurance in the cockpit
p0115 A81-18092
Development of a shadow mask type high-resolution color picture tube for cockpit display
p0183 A81-23095
New directions in cockpit alerting
p0286 A81-28298
History of SAE Committee S-7, Flight Deck and Handling Qualities Standards for Transport Category Aircraft
[SAE PAPER 801165] p0399 A81-34180
Application of CRT displays to the cockpit of tomorrow
[SAE PAPER 801168] p0399 A81-34183
Integrated cockpit information system with color display equipment
p0450 A81-37643
Multifunctional color displays for cockpits
p0451 A81-37646
Helicopter cockpit design for night goggle compatibility
p0472 A81-40128
Subsystem status monitor --- for military helicopters
[AHS 80-17] p0474 A81-40148
Binocular Camera for cockpit visibility of general aviation aircraft
[SAE PAPER 810628] p0524 A81-42780
The impact on helicopter cockpits of integrated advanced flight controls, avionics and optics
p0574 A81-46624
Combat cockpit design
p0622 A81-49173
Human Factors of Flight-deck Automation: NASA/Industry Workshop
[NASA-TM-81260] p0191 N81-16022
Test and evaluation of improved aircrew restraint systems for combat helicopers
p0205 N81-17017
An advanced electronic cockpit instrumentation system: The coordinated cockpit display
p0213 N81-17074
The influence of visual requirements on the design of military cockpits
p0213 N81-17075
Evaluation of the visual acquisition range of en-route air traffic from cockpit observations
[DFVLR-MITT-80-14] p0332 N81-20058
Application of computer colour raster displays in the cockpit in research flight simulation
[AD-A096542] p0377 N81-22063
Aircraft canopy lock
[NASA-CASE-FRC-11065-1] p0426 N81-24047
The future cockpit of the next generation of civil aircraft --- Airbus A310 digital displays
[SNIAS-802-111-113] p0427 N81-24057
System digitization: Its effect in the cockpit --- on performance
[SNIAS-802-111-115] p0428 N81-24062
A compendium of aircraft cockpit vision surveys, 1950 through 1980, volume 1
[AD-A101473] p0580 N81-30104
Development of avionics installation interface standards
[AD-A101423] p0583 N81-30120
Information transfer within the cockpit: Problems in intracockpit communications
p0595 N81-31167
Comparative intelligibility of speech materials processed by standard Air Force voice communication systems in the presence of simulated cockpit noise
p0604 N81-31462
CODING
NT REDUNDANCY ENCODING
COEFFICIENT OF FRICTION
Hydroplaning and coefficient of friction in wet runway testing
p0419 A81-37300
Influence of friction forces on the motion of VTOL aircraft during landing operations on ships at sea
[NASA-TM-81305] p0579 N81-30080
COEFFICIENTS
NT AERODYNAMIC COEFFICIENTS
NT COEFFICIENT OF FRICTION

p0551 N81-29294
COLLISION AVOIDANCE
NT BEACON COLLISION AVOIDANCE SYSTEMS
Aircraft collision avoidance and separation assurance
[SAE PAPER 800616] p0062 A81-15336
Discrete Address Beacon System - The obvious alternative
[SAE PAPER 800625] p0063 A81-15381
The role of aircraft separation assurance in the cockpit
p0115 A81-18092
Satellites to aid flight safety
[IAF PAPER 80-IAA-17] p0115 A81-18010
Collisions between aircraft and birds
p0122 A81-19045
The evaluation of aircraft collision probabilities at intersecting air routes
p0174 A81-21907
Some design and procedural aspects of in-flight collision avoidance
[AIAA PAPER 81-0805] p0368 A81-33885
Use of atmospheric electric fields for vertical stabilization and terrain avoidance
[AIAA 81-1848] p0556 A81-44126

Aerial collisions with relief features
p0557 A81-44323
A simple radar for navigation accuracy measurements
p0612 A81-47844
Aircraft collision avoidance
[GPO-50-158] p0091 N81-13041
Midair and near midair collisions on two- and three-dimensional curvilinear flight paths
[DFVLR-FB-80-13] p0128 N81-13944
Collision avoidance systems. Citations from the NTIS data base
[PB80-815020] p0193 N81-16038
Conflict monitoring analysis of parallel route spacing in the high altitude airspace, volume 2
[AD-A094152] p0250 N81-18038
Active BCAS: Design and validation of the surveillance subsystem
[AD-A095049] p0270 N81-19084
Initial design and experimental implementation of the traffic advisory service of ATARS
[AD-A095462] p0331 N81-20055
An update of the Discrete Address Beacon System (DABS) alternatives study
[AD-A096264] p0340 N81-21052
Results of an active beacon collision avoidance experiment conducted in the Los Angeles airspace
[AD-A096285] p0340 N81-21053
Laser beacon collision avoidance systems
p0372 N81-22009
Feasibility of collision warning, precision approach and landing using GPS, volume 1
[NASA-CR-165675] p0537 N81-28070
An investigation of reports of Controlled Flight Toward Terrain (CFTT)
[NASA-CR-166230] p0546 N81-29108
Effect of display update interval, update type, and background on perception of aircraft separation on a cockpit display on traffic information
[NASA-TM-81171] p0548 N81-29127
Active beacon collision avoidance logic evaluation. Volume 1: Mode C equipped (ATCRBS) threat phase
[AD-A102163] p0595 N81-31181

COLLISION WARNING DEVICES
U COLLISION AVOIDANCE
U WARNING SYSTEMS

COLLISIONS
NT BIRD-AIRCRAFT COLLISIONS

Civil helicopter wire strike assessment study. Volume 2: Accident analysis briefs
[NASA-CR-152390] p0023 N81-10019

COLLOIDS
NT FOG

COLOR CODING
Multifunctional color displays for cockpits
p0451 A81-37646
Application of computer generated color graphic techniques to the processing and display of three dimensional fluid dynamic data
[NASA-TM-82658] p0552 N81-29782

COLOR PERCEPTION
U COLOR VISION

COLOR TELEVISION
A modular low-cost raster-scan colour visual system
p0283 A81-27892
Application of computer colour raster displays in the cockpit in research flight simulation
[AD-A096542] p0377 N81-22063

COLOR VISION
Characteristics of flight simulator visual systems
[AGARD-AR-164] p0541 N81-28107

COMBAT
The future of training for aerial combat
p0060 A81-15118
The variable-speed tail-chase aerial combat problem
p0351 A81-31295
Air combat advantages from reaction control systems
[SAE PAPER 801177] p0400 A81-34190
U.S. Navy/USAF development of Tactical Aircrew Combat Training System/Air Combat Maneuvering Instrumentation /TACTS/ACMI/
[SAE PAPER 801183] p0401 A81-34196
Energy maneuverability displays for air combat training
[SAE PAPER 801185] p0401 A81-34198
Simulated A-10 combat environment
[SAE PAPER 801187] p0401 A81-34199
Combat survivability with advanced aircraft propulsion development
[AIAA PAPER 81-1506] p0507 A81-40913
Energy maneuverability display for the Air Combat Maneuvering Range/Tactical Training System (ACMR/TACTS)
[AD-A092974] p0208 N81-17081
Ten years of US Marine Corps Harrier operations
p0632 N81-33140
The consequences of certain operational requirements on the conceptual design of combat helicopters
p0634 N81-33153

COMBINATORIAL ANALYSIS
NT FACTORIALS

COMBUSTIBILITY
U FLAMMABILITY

COMBUSTIBLE FLOW
Three-dimensional model of spray combustion in gas turbine combustors
[AIAA PAPER 81-0324] p0165 A81-20751
Sudden expansion injection for ram-rockets
p0293 A81-29071
Prediction of swirling reacting flow in ramjet combustors
[AIAA PAPER 81-1485] p0506 A81-40903
An implicit finite volume method for elliptical flow computation --- numerical integration, aerothermodynamics
p0255 N81-18248

COMBUSTION

Evaluation of fuel character effects J79 smokeless combustor
[AD-A095057] p0278 N81-19323
Coating for prevention of titanium combustion
[NASA-CR-165360] p0539 N81-28094

COMBUSTION CHAMBERS
Variable geometry, lean, premixed, prevaporized fuel combustor conceptual design study
[ASME PAPER 80-GT-16] p0019 A81-12609
The development of low-toxic combustion chambers of transport gas turbine engines
p0060 A81-14787
A simple combustor system for a small gas turbine engine
p0104 A81-17503
A vaporizing combustor with double combustion spaces
p0109 A81-17827
An experimental study on kerosene-hydrogen hybrid combustion in a gas turbine combustor
p0109 A81-17841
Vector and scalar characteristics of opposing jets discharging normally into a cross-stream
p0110 A81-17997
Considerations of the use of vitiated preheat --- for engine inlets
p0150 A81-20023
Problems and promises in gas turbine combustor design development
p0236 A81-26007
Investigation of the influence of active particles on the basic combustion characteristics in turbulent flow
p0242 A81-26986
Flowfield studies of dump combustors
p0292 A81-29064
Preliminary experimental study of combustion in the solid rocket-ramjet
p0292 A81-29067
Sudden expansion injection for ram-rockets
p0293 A81-29071
Film cooling performance of liner cooling devices
p0293 A81-29075
Analysis of a reverse flow, annular combustion chamber
p0294 A81-29081
Cyclone combustors in low emission gas turbine applications
p0294 A81-29082
Factors limiting turbine inlet temperatures
p0294 A81-29083
A comparison of two droplet models for gas-turbine combustion chamber flows

p0294 A81-29086
The combustion modelling of swirling flows for gas
turbine combustors
p0295 A81-29087
The effect of oxygen concentration distribution on
altitude relighting performance of a turbo-jet
engine combustor
p0295 A81-29089
The influence of flames on the formation of
self-excited combustion chamber oscillations
p0298 A81-29197
Impacts of broadened-specification fuels on
aircraft turbine engine combustors
[ASME PAPER 81-GT-2] p0310 A81-29927
Pattern factor improvement in the F-100 primary
combustion system
[ASME PAPER 81-GT-25] p0311 A81-29941
An exploratory study of soot sample integrity and
probe perturbation in a swirl-stabilized combustor
[ASME PAPER 81-GT-27] p0311 A81-29943
Preliminary study on reheat combustor for advanced
gas turbine
[ASME PAPER 81-GT-29] p0311 A81-29944
Development of a low NO/x/ lean premixed annular
combustor
[ASME PAPER 81-GT-40] p0312 A81-29954
Premixing and flash vaporization in a two-stage
combustor
[ASME PAPER 81-GT-41] p0312 A81-29955
Some factors affecting altitude relighting
performance of turbojet engine combustor
[ASME PAPER 81-GT-49] p0312 A81-29962
Low NO/x/ and fuel flexible gas turbine combustors
[ASME PAPER 81-GT-99] p0315 A81-30006
Design and development of the combustor inlet
diffuser for the NASA/GE energy efficient engine
[ASME PAPER 81-GT-129] p0316 A81-30033
Test-stand combustion chamber for the study and
development of forced working processes --- for
jet engines
p0319 A81-30151
A theoretical and experimental study of combustion
chambers with recirculation
[ONERA, TP NO. 1981-39] p0460 A81-39242
Fluctuation of gas parameters behind the
combustion chamber of gas turbine engines
p0466 A81-40024
TF41/Lamilloy Accelerated Mission Test
[AIAA PAPER 81-1349] p0501 A81-40833
Exploratory development program to improve
combustor dome operating characteristics
[AIAA PAPER 81-1351] p0501 A81-40834
Improved combustor domes designed for hot streak
reduction
[AIAA PAPER 81-1352] p0501 A81-40835
Improved combustor durability - Segmented approach
with advanced cooling techniques
[AIAA PAPER 81-1354] p0501 A81-40836
The influence of blade wakes on the performance of
combustor pre-diffusers
[AIAA PAPER 81-1387] p0502 A81-40856
Fuel character effects on the TF41 engine
combustion system
[AIAA PAPER 81-1391] p0503 A81-40858
Interpretation of ramjet combustor test data
[AIAA PAPER 81-1433] p0504 A81-40870
Scramjet combustor wall boundary layer analysis
[AIAA PAPER 81-1434] p0504 A81-40871
Prediction of swirling reacting flow in ramjet
combustors
[AIAA PAPER 81-1485] p0506 A81-40903
The E3 combustors - Status and challenges
[AIAA PAPER 81-1353] p0514 A81-42176
The use of engine operating experience in the
preliminary design of aircraft gas turbine
combustion systems
[AIAA PAPER 81-1399] p0515 A81-42189
Modeling of ramjet combustors using simple reactor
theory
[AIAA PAPER 81-1429] p0515 A81-42196
Fuel character effects on current, high pressure
ratio, can-type turbine combustion systems
[AD-A089182] p0029 N81-10073
Effect of ambient conditions on the emissions from
a gas turbine combustor
[NASA-CR-3355] p0080 N81-12105
Mixing and combustion in high speed air flows
[AD-A090536] p0083 N81-12192
Analysis of pressure spectra measurements in a
ducted combustion system
[NASA-TM-81583] p0146 N81-15760
Two-stage combustion for reducing pollutant
emissions from gas turbine combustors
[NASA-CR-163877] p0196 N81-14856
Combustor liner durability analysis
[NASA-CR-165250] p0213 N81-17979
Full annular combustor test facility for high
pressure/high temperature testing
p0432 N81-24097
Selected results from combustion research at the
Lewis Research Center
[NASA-TM-82627] p0443 N81-25083
Small gas-turbine combustor study: Fuel injector
evaluation

NT CHEMICAL COMPOSITION
NT CONCENTRATION (COMPOSITION)
NT GAS COMPOSITION
NT MOISTURE CONTENT

COMPOUND HELICOPTERS
An ABC status report --- Advancing Blade Concept for XH-59A rotors
p0572 A81-46610

COMPRESSED AIR
Development for new laboratories for future testing
p0433 N81-24105

COMPRESSIBILITY

Solution of plane cascade flow using improved surface singularity methods --- application of panel method to internal aerodynamics [NASA-TM-81509] p0140 N81-14979

COMPRESSIBILITY EFFECTS

Calculation of nonlinear compressibility effects of airfoils in subcritical conditions p0225 A81-23853

Vortex bursting on slender delta wings in transonic flow and its influence on missile aerodynamic characteristics [DGLR PAPER 81-047] p0611 A81-47622

COMPRESSIBLE BOUNDARY LAYER

Laminar boundary layer on swept-back wings of infinite span at an angle of attack p0107 A81-17656

Compressible boundary-layer stability calculations for sweptback wings with suction [AIAA PAPER 81-0196] p0169 A81-20840

The linear instability due to the compressible crossflow on a swept wing p0170 A81-21168

COMPRESSIBLE FLOW

NT TRANSONIC FLOW

Inlet flow distortion in turbomachinery [ASME PAPER 80-GT-20] p0109 A81-17952

Influence of free-stream turbulence intensity on heat transfer in the two-dimensional turbulent boundary layer of an accelerated compressible flow p0110 A81-17994

A computerized study of wave characteristics in a time dependent compressible flow [AIAA PAPER 81-0410] p0169 A81-20830

A new approach to the solution of the boundary layer equations of an ideal compressible flow over a flat plate p0226 A81-24002

Research on vortex bursting in compressible flow --- Thesis p0230 A81-24477

Linearized analysis of the three-dimensional compressible flow through a rotating annular blade row p0234 A81-25446

On the solution of Navier Stokes equations of the flow in turbomachines p0296 A81-29099

Numerical computation of compressible steady cascade flows p0296 A81-29100

Three dimensional flow in annular diffusers with two vortex distributions at entry p0297 A81-29112

Laminar boundary layer on an oscillating wedge p0309 A81-29864

The high-speed airfoil program p0185 N81-15970

Measurement of canard wakes [AD-A095063] p0263 N81-19029

The calculation of quasi-three-dimensional frictionless compressible flow in axial turbomachines --- partial differential equations [PNR-90047] p0275 N81-19127

The effect of boundary layer growth on the stability of compressible flows p0587 N81-30389

COMPRESSION LOADS

NT IMPACT LOADS

Design and fabrication of stabilized organic matrix composites p0005 A81-11338

Compression fatigue behavior of graphite/epoxy in the presence of stress raisers p0418 A81-37136

Effects of truncation of a predominantly compression load spectrum on the life of a notched graphite/epoxy laminate p0418 A81-37137

Heat generation in aircraft tires under free rolling conditions [NASA-CR-164273] p0393 N81-23461

COMPRESSION RATIO

Development of small fuel efficient aircraft engines [AHS 80-38] p0477 A81-40167

COMPRESSION TESTERS

U COMPRESSION TESTS

COMPRESSION TESTS

Some results from a crash energy absorption test for evaluating composite fuselage construction p0575 A81-46639

Buckling of sandwich panels subjected to axial compression, shear forces and lateral pressure. Part 2: Analysis [SAAB-TN-AE-72-PT-2] p0006 N81-12465

COMPRESSIVE STRENGTH

Stability and ultimate strength of carbon fiber reinforced plastic panels p0481 A81-40521

COMPRESSOR BLADES

Reduction of energy consumption in the vibrational shot peening of axial compressor vanes p0005 A81-11321

Effect of surface roughness over the blade in compressor cascade p0060 A81-14924

Recent selected papers of Northwestern Polytechnical University. Parts 1 & 2 --- Book p0107 A81-17601

An aerodynamic design method for transonic axial flow compressor stage p0108 A81-17805

Structure and decay characteristics of turbulence in the near- and far-wake of a moderately loaded compressor rotor-blade [ASME PAPER 80-GT-95] p0109 A81-17954

Evaluation of compressor blade endurance limits by an accelerated method p0177 A81-22182

The axial velocity density ratio and the axial velocity density distribution in axial flow compressors and cascades p0296 A81-29101

Evaluation of blade element performance of compressor rotor blade cascades in transonic and low supersonic flow range p0296 A81-29102

The influence of blade number ratio and blade row spacing on axial-flow compressor stator blade dynamic load and stage sound pressure level [ASME PAPER 81-GT-165] p0317 A81-30064

Development of a noninterference compressor blade stress measurement system p0361 A81-32874

The influence of blade wakes on the performance of combustor pre-diffusers [AIAA PAPER 81-1387] p0502 A81-40856

Change of static pressure on the rotating blades of an axial-flow compressor during surging p0509 A81-41039

Possibility of development of an electron-fractographic method for measuring stress level produced by fatigue fracture of the material p0532 A81-43773

Damping of turbomachine blade variations by subsonic flow p0612 A81-47957

Disk residual life studies. Part 2: TF30 10th-stage compressor disk (INCOLOY 901) [AD-A089524] p0029 N81-10074

Core compressor exit stage study. Volume 3: Data and performance report for screening test configurations [NASA-CR-159499] p0078 N81-12086

The effects of solidity, interblade phase angle and reduced frequency on the time-variant aerodynamic response of a compressor stator [AD-A090546] p0081 N81-12108

An investigation of the dynamic stalling characteristics of rotating axial-flow compressor blades p0093 N81-13054

Gerry casing treatment [CUED/A-TURBO/TR-101] p0093 N81-13059

Performance evaluation of a prototype noninterference technique for measurement of turbine engines compressor blade stress [AD-A090566] p0094 N81-13061

Core compressor exit stage study. Volume 2: Data and performance report for the baseline configuration [NASA-CR-159498] p0195 N81-16051

Compressor blade monitoring system for a VA1310 (Allis Chalmers) Wind Tunnel Compressor [AD-A092920] p0217 N81-17103

Evaluation of a subsonic cascade wind tunnel for compressor blade testing

[AD-A093591] p0218 N81-17107
Investigation of the use of liquid crystal thermography to study flow over turbomachinery blades
[AD-A097289] p0391 N81-23089
WR34-8 performance improvement program. The WR34-8 gas turbine compressor test
[AD-A098293] p0429 N81-24069
Improving turbine engine compressor performance retention through airfoil coatings
p0598 N81-31203
Determination of aerodynamically adequate fillet geometry in turbocompressor blade rows
[AD-A102170] p0600 N81-31219

COMPRESSOR EFFICIENCY
The T700 booster engine
p0105 A81-17506
Turbo-compressors surge and surge control
[AIAA PAPER 81-0070] p0159 A81-20579
A simulator to test compressor research facility control system software
p0349 A81-31110
Efficiency of cantilever compressor stator blades
p0509 A81-41041
A method of performance prediction for centrifugal compressors. Part 1: Analysis. Part 2: Comparison with experiment
[ARC-R/M-3843] p0031 N81-10436

COMPRESSOR ROTORS
Comparison of experimental and computational shock structure in a transonic compressor rotor
[ASME PAPER 80-GT-81] p0109 A81-17953
Core compressor exit stage study. Volume 3: Data and performance report for screening test configurations
[NASA-CR-159499] p0078 N81-12086
Rotor redesign for a highly loaded 1800 ft/sec tip speed fan, 2
[NASA-CR-159879] p0078 N81-12087

COMPRESSORS
NT CENTRIFUGAL COMPRESSORS
NT SUPERCHARGERS
NT TRANSONIC COMPRESSORS
NT TURBOCOMPRESSORS
Investigation of instantaneous distortions in air intakes at high angles of attack
[AAAF PAPER NT 80-38] p0369 A81-33931
The effects of solidity, interblade phase angle and reduced frequency on the time-variant aerodynamic response of a compressor stator
[AD-A090546] p0081 N81-12108
Effects of downstream distance on turbulence decay for the compressor research facility low conditioning system
[AD-A091543] p0133 N81-14276
Compressor configuration and design optimization for the high reliability gas turbine
[DOE/ET-15425/T1] p0134 N81-14327
Component research for future propulsion systems
[NASA-TM-82613] p0376 N81-22055
Tests of large compressors at CE Pr
p0432 N81-24096
Semi-actuator disk theory for compressor choke flutter
[NASA-CR-3426] p0442 N81-25075
End wall flows in rotors and stators of a single stage compressor
[NASA-CR-164635] p0540 N81-28097

COMPUTATION
Civil component program Wing Section. New calculation methods for subsonic and transonic interference with planar and spatial flows
[BMFT-FB-W-80-022] p0424 N81-24034

COMPUTATIONAL FLUID DYNAMICS
Calculation of the flow field around engine-wing-configurations
p0007 A81-11613
Engine air intake design support by use of computational methods and comparison of theoretically derived pressure distributions with experimental data
p0008 A81-11614
Review of numerical methods for the problem of the supersonic flow around bodies at angle of attack
p0011 A81-11639
Research on transonic wings at the National Aerospace Laboratory, Japan
p0011 A81-11640
Flow computation around multi-element airfoils in viscous transonic flow
p0011 A81-11641
Calculation of plane transonic flows using the integral equation method and shock fitting
p0016 A81-11779
Calculation of separated viscous flows on wing profiles by a coupling approach
[CNERA, TP NO. 1980-122] p0017 A81-11920
A finite-span wing in transonic flow
p0054 A81-13741
Design and analysis of slat systems in transonic flow
p0058 A81-14392
Qualitative calculations of transonic drag-rise characteristics using the equivalence rule
p0058 A81-14393
A nonlinear, discrete-vortex-perturbation method for unsteady lifting-surface problems with edge separations
p0058 A81-14394
Numerical solutions of transonic flows by parametric differentiation and integral equation techniques
p0067 A81-15896
Thin-layer approximation for three-dimensional supersonic corner flows
p0067 A81-15900
Nonstationary method for the direct statistical modeling of rarefied-gas flows
p0069 A81-16454
Variational problems of gas dynamics
p0069 A81-16455
The method of superelements in the dynamics of complex structures
p0101 A81-16969
Radiation boundary conditions for wave-like equations --- numerical jet acoustics experimentation
p0153 A81-20223
Numerical calculation of jet-induced ground effect in VTOL
[AIAA PAPER 81-0015] p0157 A81-20539
The numerical solution of incompressible turbulent flow over airfoils
[AIAA PAPER 81-0047] p0158 A81-20563
Numerical study of a scramjet engine flow field
[AIAA PAPER 81-0186] p0162 A81-20659
A computational model for low speed flows past airfoils with spoilers
[AIAA PAPER 81-0253] p0163 A81-20702
Solutions for slightly over- or under-expanded hot supersonic jets exhausting into cold subsonic mainstreams
[AIAA PAPER 81-0257] p0163 A81-20705
3-D viscous analysis of ducts and flow splitters
[AIAA PAPER 81-0277] p0163 A81-20720
Compressible boundary-layer stability calculations for sweptback wings with suction
[AIAA PAPER 81-0196] p0169 A81-20840
Spanwise distribution of control points in the method of finite elementary solutions
[AIAA PAPER 79-1879] p0169 A81-21011
Numerical techniques in linear duct acoustics - A status report
[ASME PAPER 80-WA/NC-2] p0170 A81-21120
Numerical solution of transonic flow through a cascade with slender profiles
p0170 A81-21197
Calculation of supersonic gas flows about wings
p0170 A81-21201
New approach to the solution of large, full matrix equations --- Neumann problem for inviscid incompressble flow past airfoils
p0171 A81-21552
Three-dimensional wing boundary layer calculated with eight different methods
p0171 A81-21555
Analysis of a symmetric transonic aerofoil with the finite element method - A new upwinding technique
p0183 A81-22904
Transonic flow calculations over two-dimensional canard-wing systems
[AIAA PAPER 79-1565] p0183 A81-23367
Calculation of nonlinear compressibility effects of airfoils in subcritical conditions
p0225 A81-23053

Slightly blunted cone in a supersonic flow at angle of attack p0225 A81-23908

A new approach to the solution of the boundary layer equations of an ideal compressible flow over a flat plate p0226 A81-24002

Numerical study on viscous shear flow past a circular cylinder p0228 A81-24077

Calculation of the boundary of a supersonic inviscid jet flowing into a submerged space or a supersonic wake p0229 A81-24172

A contribution to the computation of transonic supersonic flows over blunt bodies p0230 A81-24423

The problem of the unsteady hypersonic flow past a plane profile p0231 A81-24730

Plane transonic solution with shock by direct iteration p0231 A81-24814

Transient three-dimensional flow along a porous plate p0231 A81-24815

Subsonic cascade flow analysis by a finite element method p0233 A81-25311

Numerical computation of transonic potential flow through nozzles p0233 A81-25353

A numerical study of vortex shedding from one and two circular cylinders p0233 A81-25355

Recent developments in integral equation method in transonic flow p0234 A81-25384

Calculation of flow with variable specific heat around a profile p0235 A81-25689

A mathematical computer simulation of stationary and nonstationary flow of an ideal incompressible fluid around solid profiles and arrays p0237 A81-26045

Calculation of circular flow inhomogeneities downstream of the turbine wheel p0281 A81-27372

Numerical solution of the direct one-dimensional problem of a critical flow in nozzles p0288 A81-28578

Aerodynamic calculation of turbine stator cascades with curvilinear leaned blades and some experimental results p0293 A81-29072

The combustion modelling of swirling flows for gas turbine combustors p0295 A81-29087

Numerical computation of compressible steady cascade flows p0296 A81-29100

The axial velocity density ratio and the axial velocity density distribution in axial flow compressors and cascades p0296 A81-29101

Analysis of turbulent boundary layer on cascade and rotor blades of turbomachinery p0296 A81-29106

Effects of solid particles suspended in fluid flow through an axial flow compressor stage p0297 A81-29108

Development and validation of computational flow analysis for design of inlets and nozzles p0298 A81-29117

A method for obtaining shockless transonic flows past two-dimensional airfoils whose profiles are partially modified from a given arbitrary profile p0298 A81-29201

Calculation of the aerodynamic characteristics of aircraft with jet mechanization p0299 A81-29301

A diagonal form of an implicit approximate-factorization algorithm p0300 A81-29363

Finite element methods for transonic blade-to-blade calculation in turbomachines [ASME PAPER 81-GT-5] p0310 A81-29930

Inverse or design calculations for non-potential flow in turbomachinery blade passages [ASME PAPER 81-GT-78] p0314 A81-29986

A model for dynamic loss response in axial-flow compressors [ASME PAPER 81-GT-154] p0317 A81-30053

Semi-inverse method of computation in inviscid transonic flows - Application to the design of turbomachines blades profiles [ASME PAPER 81-GT-206] p0318 A81-30096

A theoretical treatment of lifting surface theory of an elliptic wing p0347 A81-30653

On the design of modern airfoil sections by numerical methods p0347 A81-30705

A computer code for the calculation of aircraft trailing vortices p0347 A81-30710

A time marching finite volume method for blade-to-blade flows using a body-fitted curvilinear mesh p0347 A81-30717

Approximations and short cuts based on generalized functions p0347 A81-30730

Subsonic gas flow past a wing profile p0349 A81-31034

Calculation of the flow pattern behind an aircraft wing p0349 A81-31041

Study of the secondary flow in the downstream of a moving blade row in an axial flow fan p0355 A81-31767

Study of the characteristics of a base-vented wing in nonlinear theory [AAAF PAPER NT 80-40] p0369 A81-33927

An experimental and theoretical investigation of a twin-entry radial flow turbine under non-steady flow conditions [SAE PAPER 801136] p0397 A81-34167

Calculation of supersonic flow around a wing with constant curvature of its leading edges p0413 A81-35916

Calculation of supersonic flow past interfering wings p0413 A81-36455

Calculation of flow past wings with supersonic sharp edges p0418 A81-36984

Wing with finite span in a transonic flow p0420 A81-37480

Analysis of stalled airfoils by simultaneous perturbations to viscous and inviscid equations [AIAA PAPER 81-1239] p0454 A81-38096

Aerodynamic characteristics of wings of arbitrary planform p0461 A81-39267

Analysis of steady, two-dimensional, chemically reacting nonequilibrium flow by an unsteady, asymptotically consistent technique --- for performance prediction of ramjet propulsion system [AIAA PAPER 81-1432] p0504 A81-40869

Scramjet combustor wall boundary layer analysis [AIAA PAPER 81-1434] p0504 A81-40871

A parametric study of staged fuel injector configurations for scramjet applications [AIAA PAPER 81-1460] p0505 A81-40880

Prediction of swirling reacting flow in ramjet combustors [AIAA PAPER 81-1485] p0506 A81-40903

Transonic swept wings studied by the lifting-line theory p0509 A81-41090

Calculation of the impingement of cloud droplets in a cylinder by the finite-element method p0533 A81-43890

Some recent applications of high-lift computational methods at Boeing [AIAA PAPER 81-1657] p0534 A81-43980

Computational fluid mechanics and its impact on the aircraft aerodynamicist [DGLR PAPER 81-003] p0611 A81-47621

Numerical experiments on unsteady flows through vibrating cascades p0613 A81-47961

Digital simulation for energy conservation in a large wind tunnel plant system p0613 A81-48003

Evaluation of two-dimensional subsonic oscillatory
airforce coefficients and loading distributions

COMPUTERIZED DESIGN
Numerical optimization - An assessment of its role in transport aircraft aerodynamic design through a case study
p0006 A81-11604
DRAPO - Computer-assisted design and manufacturing system
p0007 A81-11610
Computer aided compilation of an electrical drawing file
p0007 A81-11611
Engine air intake design support by use of computational methods and comparison of theoretically derived pressure distributions with experimental data
p0008 A81-11614
Optimum design of axial flow gas turbine stage. I - Formulation and analysis of optimization problem. II - Solution of the optimization problem and numerical results
p0019 A81-12608
Computer-aided methods for redesigning the stabilised pitch control system of a semi-active thermal homing missile
p0051 A81-13250
Computer-aided roll pass design in rolling of airfoil shapes
p0065 A81-15796
Discrete-continuous variable structural synthesis using dual methods
p0066 A81-15894
Optimal design of frames with substructuring
p0068 A81-16276
Aerodynamic design of a ducted propeller - Optimization of efficiency
p0102 A81-17146
Recent selected papers of Northwestern Polytechnical University. Parts 1 & 2 --- Book
p0107 A81-17801
Finite difference computation of the steady transonic potential flow around airplanes
p0107 A81-17802
Aerodynamic calculations and design of subcritical aerofoils
p0108 A81-17804
An aerodynamic design method for transonic axial flow compressor stage
p0108 A81-17805
An optimum design procedure of total-temperature thermocouple probes
p0108 A81-17807
The automatic matrix force method and techniques for handling more complex computations with given computer capacity
p0109 A81-17815
Structural analysis of fuselages with cutouts by finite element method
p0108 A81-17816
The measurement and analysis of station parameters of a turbojet engine
p0109 A81-17823
Increasing capacity with computer-assisted decision making --- airport planning

p0113 A81-18080
Airspace simulation in airport system planning
p0114 A81-18086
Frequency-shaped cost functionals - Extension of
linear-quadratic-Gaussian design methods
p0116 A81-18578
Performance of computer-optimized tapered-roller
bearings to 2.4 million DN
[ASME PAPER 80-C2/LUB-18] p0117 A81-18672
Computer-aided process planning system for
aircraft engine rotating parts
p0149 A81-19836
A computer-aided design system geared toward
conceptual design in a research environment ---
for hypersonic vehicles
[AIAA PAPER 81-0372] p0166 A81-20789
A penalty function method for structural optimum
design with aeroelastic constraints
p0223 A81-23727
Calculation of internal and external flow field
and cowl pressure drag in the supersonic
axisymmetric nose inlets
p0224 A81-23730
Lifting surface theory and the numerical method of
wings with small angles of sideslip at subsonic
and supersonic speeds
p0224 A81-23851
Supermatrix method for multi-substructure analysis
p0225 A81-23854
The digital simulation of stability for
multi-stage axial compressor
p0225 A81-23856
Landing gear shock absorber design criteria and
the assessment of tire/wheel configurations
p0232 A81-24940
The Aerospace Vehicle Interactive Design system
[AIAA PAPER 81-0233] p0234 A81-25475
Development and validation of computational flow
analysis for design of inlets and nozzles
p0298 A81-29117
IPAD applications to the design, analysis, and/or
machining of aerospace structures --- Integrated
Program for Aerospace-vehicle Design
[AIAA 81-0512] p0301 A81-29388
Design and development of the control laws for the
F-18 primary flight control system
p0320 A81-30245
Computerized design and optimization of
self-contained airborne high power electrical
systems
p0323 A81-30310
On the design of modern airfoil sections by
numerical methods
p0347 A81-30705
An Interactive Weight Accounting Program /IWAP/
[SAWE PAPER 1345] p0353 A81-31383
Computer aided technology interface with weights
engineering --- aircraft design
[SAWE PAPER 1346] p0353 A81-31384
PARAM - A new weight sizing routine ---
cost-effective computerized design for aircraft
[SAWE PAPER 1367] p0353 A81-31389
Integrated CAD/CAM for the 1980s
[SAE PAPER 801170] p0400 A81-34185
The CADAM system for aircraft structural design
[SAE PAPER 801208] p0403 A81-34216
CAD - The designers' new tool --- in aircraft
production
[AIAA PAPER 81-0850] p0407 A81-34352
ICAM 'Manufacturing Cost/Design Guide' /MC/DG/ ---
Integrated Computer Aided Manufacturing for
aircraft systems
[AIAA PAPER 81-0855] p0408 A81-34353
Computer-aided design and manufacture in aircraft
production /CAD/CAM/
p0451 A81-37647
The application of interactive graphics to thermal
modeling
[AIAA PAPER 81-1180] p0459 A81-39159
Computerized three-dimensional aerodynamic design
of a lifting rotor blade
[AHS 80-2] p0473 A81-40137
Composite fan exit guide vanes for high bypass
ratio gas turbine engines
[AIAA PAPER 81-1357] p0501 A81-40839
Engine duty cycle estimation for conceptual design
aircraft
[AIAA PAPER 81-1368] p0514 A81-42179
An approach to conformal inlet diffuser design for
integrated propulsion systems
[AIAA PAPER 81-1395] p0514 A81-42185
Engine life methodologies for conceptual design
[AIAA PAPER 81-1398] p0515 A81-42188
Engine life and usage methodologies for conceptual
design
[AIAA PAPER 81-1651] p0533 A81-43937
Multiobjective insensitive design of airplane
control systems with uncertain parameters
[AIAA 81-1818] p0555 A81-44108
Pareto-optimal multi-objective design of airplane
control systems
p0563 A81-45518
Optimal multirate flight control design
p0563 A81-45522
Computer aided helicopter design
p0572 A81-46613
Analytical and computer-aided design of automated
systems for the testing of aircraft engines ---
Russian book
p0578 A81-46850
Computational fluid mechanics and its impact on
the aircraft aerodynamicist
[DGLR PAPER 81-003] p0611 A81-47621
A technique for the implementation of nonlinear
models as real-time digital simulations --- with
application to aircraft turbine engine design
p0615 A81-48333
Structural synthesis - Its genesis and development
p0622 A81-49076
Design options study. Volume 4: Detailed
analyses supporting appendices --- advanced
civil military aircraft
[AD-A089539] p0027 N81-10059
Evaluation of the impact computer program as a
linear design tool for bird resistant aircraft
transparencies
[AD-A091051] p0091 N81-13039
Application of the MNA design method to a
nonlinear turbofan engine --- multivariable
Nyquist array method
[NASA-CR-163855] p0143 N81-15001
Computer code for the determination of ejection
seat/man aerodynamic parameters
[AD-A092721] p0191 N81-16026
A conversational, topological grid method and
optimization of structural calculations
involving finite elements
[AAAF-NT-79-30] p0210 N81-17053
Supersonic cruise research aircraft structural
studies: Methods and results
p0246 N81-18008
GASP- General Aviation Synthesis Program. Volume
1: Main program. Part 1: Theoretical
development

GASP- General Aviation Synthesis Program. Volume
6: Performance. Part 1: Theoretical development
[NASA-CR-152303-VOL-6-PT-1] p0271 N81-19093
Design of turbine cascades with transitional
profile boundary layers
p0278 N81-19456
Application of a structural optimization procedure
for advanced wings
[AGARD-R-691] p0333 N81-20064
Pressure and force data for a flat wing and a
warped conical wing having a shockless
recompression at Mach 1.62
[NASA-TP-1759] p0372 N81-22016
A study of real-time computer graphic display
technology for aeronautical applications
[NASA-CR-164221] p0380 N81-22727
Structures and Dynamics Division research and
technology plans, fiscal year, 1981
[NASA-TM-83137] p0491 N81-26497

Composite structural materials
[NASA-CR-164634] p0541 N81-29176
Adaptive finite element technology in integrated design and analysis --- aircraft structures design
[NASA-CR-164560] p0543 N81-28810
Conceptual/preliminary design study of subsonic v/stol and stovl aircraft derivatives of the S-3A
[NASA-TM-81310] p0547 N81-29118
Computer evaluation of the on-and-off design of an axial air turbine
[AD-A101102] p0549 N81-29131
Direct digital design method for reconfigurable multivariable control laws for the A-7D Digital 2 aircraft
[AD-A100794] p0549 N81-29136
Structural optimization of advanced aircraft structures --- computerized design
[MBB-S/PUB/32] p0582 N81-30122
Development of an aircraft maneuver load spectrum based on VGH data
[AD-A102750] p0620 N81-32142
Software survey for the avionics test bed --- for large space structures
[NASA-CR-161089] p0629 N81-32143

COMPUTERIZED SIMULATION
NT ANALOG SIMULATION
NT DIGITAL SIMULATION
Prediction of changes in aircraft noise exposure
p0017 A81-11820
Numerical prediction of bypass engine jet noise
[AIAA PAPER 80-1006] p0057 A81-14300
Airspace simulation in airport system planning
p0114 A81-18086
The rigidity and performance of a simple spiral bevel helicopter gearbox
[ASME PAPER 80-C2/DET-103] p0117 A81-18654
Improving surface current injection techniques via one- and two-dimensional models
p0149 A81-19940
High-level languages in affordable aircraft simulators
p0154 A81-20418
Numerical simulations of a segmented-plenum, perforated, adaptive-wall wind tunnel
[AIAA PAPER 81-0160] p0162 A81-20640
Calculation of viscous, sonic flow over hemisphere-cylinder at 19 deg incidence - The capturing of nose vortices
[AIAA PAPER 81-0189] p0162 A81-20661
A computational model for low speed flows past airfoils with spoilers
[AIAA PAPER 81-0253] p0163 A81-20702
Computer simulation of airfoil icing without runback
[AIAA PAPER 81-0402] p0167 A81-20809
Simulated aircraft takeoff performance with frosted wings
[AIAA PAPER 81-0404] p0167 A81-20811
Air traffic simulation as a validation tool
p0172 A81-21718
A case study - Real time simulation and structured design
p0172 A81-21721
The flight assessment and applications of DME/DMR. I, II
p0174 A81-21968
SAFEST computer simulation of ejection seat performance
p0175 A81-22089
Low level, adverse attitude escape using a vertical seeking ejection seat
p0176 A81-22094
Crack propagation in lugs
p0180 A81-22629
Computer simulation of unsteady flow past lifting rotors of coaxial configuration
p0230 A81-24389
A computer simulation of turbulent jet flow
p0230 A81-24424
Numerical simulation of supersonic flow around solids of revolution with a leading detachment zone
p0231 A81-24757
The role of simulation in automatic flight control systems research
p0283 A81-27894
Computation of wind tunnel model deflections --- for transport type solid wing
[AIAA 81-0482] p0300 A81-29381
On the convergence of unsteady generalized aerodynamic forces
[AIAA 81-0647] p0307 A81-29560
Aerodynamic modeling of an oscillating wing with external stores
[AIAA 81-0648] p0307 A81-29561
Interactive multi-mode blade impact analysis
[ASME PAPER 81-GT-79] p0314 A81-30007
Life cycle cost before, during and after the design of aircraft propulsion systems
[ASME PAPER 81-GT-111] p0315 A81-30016
Program Navigate - A simulation computer program to verify OAS navigation capability --- Offensive Avionics System
p0322 A81-30289
Simulation of a third-order vertical channel mechanization --- for airplane inertial navigation
p0322 A81-30290
Optimal tracking design and simulation for a monopulse airborne radar system utilising a predicted dual beam antenna design
p0323 A81-30293
Ground moving target radar signal simulation
p0323 A81-30306
Simulation techniques for new generation aircraft maintenance training devices
p0324 A81-30331
Advanced target tracking by dynamic scene analysis
p0350 A81-32409
Digital computer simulation of aircraft hydraulic systems
[SAE PAPER 801193] p0402 A81-34203
Flight Simulation Technologies Conference, Long Beach, Calif., June 16-18, 1981, Technical Papers
p0414 A81-36554
A simulation approach to MIL-STD-1553 Multiplex Bus interfacing
[AIAA 81-0971] p0415 A81-36560
Microcomputer based engine model used in flight simulation applications
[AIAA 81-0973] p0415 A81-36562
Versatile and economical real-time simulation for digital flight control systems
[AIAA 81-0974] p0415 A81-36563
Development of a flight simulation capability in the dynamic environment simulator
[AIAA 81-0978] p0415 A81-36566
Theory and application of finite element analysis to structural crash simulation
p0416 A81-36614
Experimental aircraft of the DFVLR for in-flight simulation and flight control technology
p0432 A81-37654
The Shenandoah flies again - A computer simulation
[AIAA 81-1325] p0436 A81-38534
Numerical simulation for the design of a supersonic cruise nozzle with a fluid noise shield
[AIAA PAPER 81-1216] p0450 A81-39086
Simulation model validation - Airport applications
p0461 A81-39320
An investigation of the recovery from an engine failure in a twin engine augmentor wing aircraft using the NAE Airborne Simulator
p0509 A81-41189
Analytical studies on the effects of cooling flows on light aircraft drag
[SAE PAPER 810577] p0519 A81-42741
Matrix load analysis method for flexible aircraft structures
[PAPER 810610] p0522 A81-42766
Simulation of aircraft seat response to a crash environment
[SAE PAPER 810612] p0522 A81-42768
Comparison of model testing with computer simulations of an air landing system
[AIAA PAPER 81-1663] p0534 A81-43842
A model-following technique for insensitive aircraft control systems
[AIAA PAPER 81-1867] p0560 A81-44563
Three edge-point estimation schemes for tracking airborne targets
p0562 A81-44601
Generic multi-body formulation of heavy lift airship equations of motion
p0562 A81-45539
Optimization theory applied to higher harmonic control of circulation controlled rotors
p0571 A81-46406

Simulation model to evaluate maintenance
strategies for large network of fielded systems
p0613 A81-48009
The array processor - A real-time simulator
p0614 A81-48328
Function generation techniques --- in real time
hybrid simulations
p0614 A81-48329
Numerical simulation of hydrodynamic ram --- for
aircraft fuel tanks
p0615 A81-48351
Simulation of Microwave Landing System
p0615 A81-48368
Optimization of simulation models for avionics
software verification
p0615 A81-48373
Engine requirements for the T-37 trainer aircraft
- A simulation study and analysis
p0616 A81-48379
Determination of cargo container inventories
through logistics simulation --- for air shipment
p0616 A81-48380
Adaptive features and measurement requirements for
advanced surveillance radars
p0617 A81-48544
COMLINK - A communications/EW analytical and
modeling tool
p0617 A81-48547
A comprehensive evaluation and analysis of
transonic flow calculations on three related
wing-body configurations
[FFA-TN-AU-1418-PT-1] p0022 N81-10013
System simulation applied to the evaluation of
displays for guidance and control
[DFVLR-MITT-79-10] p0028 N81-10064
Missile motion sensitivity to dynamic stability
derivatives
[AD-A089750] p0038 N81-11093
An automated procedure for developing hybrid
computer simulations of turbofan engines
[NASA-TM-81605] p0044 N81-11688
Naval aircraft operating and support
cost-estimating model: FY78 revision
[AD-A090044] p0071 N81-12013
Airport and airspace delay model description
[AD-A090781] p0074 N81-12049
An analytic model of subsonic flow around an
airflow with a spoiler
p0138 N81-14966
Advanced flight deck/crew station simulator
functional requirements
[NASA-CR-159331] p0142 N81-14994
Aerodynamic stability analysis of NASA
J85-13/planar pressure pulse generator
installation
[NASA-CR-165141] p0143 N81-15004
Computer Generated Imagery (CGI) current
technology and cost measures feasibility study
[AD-A091636] p0146 N81-15729
A survey of computer simulations of digital
avionics systems
[AD-A091943] p0195 N81-16049
Propulsion system mathematical model for a
lift/cruise fan V/STOL aircraft
[NASA-TM-81663] p0195 N81-16055
Validation of a two dimensional primitive variable
computer code for flow fields in jet engine test
cells
[AD-A092138] p0196 N81-16060
Airborne antenna pattern code: User's manual
[AD-A092316] p0201 N81-16357
A theoretical method for the simulation of
separation behavior of aircraft external stores
--- applications to computerized wind tunnel tests
[MBB-FE-122/S/PUB/16] p0203 N81-16987
Air traffic control simulation models. Citations
from the NTIS data base
[PB81-800104] p0207 N81-17037
XDRAFT-A graphite code for VTOL aircraft ground
footprint visualization
[AD-A093311] p0208 N81-17042
A scheduling model for the aerial relay system
[NASA-CR-159387] p0249 N81-18032
Validation of a two-dimensional primitive variable
computer code for flow fields in jet engine test
cells
[AD-A094615] p0254 N81-18067
Nonlinear rotor dynamics analysis --- computerized
simulation
p0257 N81-18405
Calculation of airloads for a flexible wing via
NASTRAN
[AD-A094770] p0263 N81-19031
An interactive computational aerodynamics analysis
program
[AD-A094765] p0263 N81-19033
NASA/FAA general aviation crash dynamics program
p0268 N81-19064
The role of the research simulator in the systems
development of rotorcraft
[NASA-TM-81276] p0272 N81-19101
Real-time feasibility for generation of nonlinear
textured terrain
[AD-A095070] p0277 N81-19141
Visual system Technology: Status and problems ---
training simulators
p0336 N81-20099
An approach to real-time simulation using parallel
processing
[NASA-TM-81731] p0345 N81-21803
Antenna design and development for the microwave
subsystem experiments for the terminal
configured vehicle project
[NASA-CR-164220] p0378 N81-22282
A study of real-time computer graphic display
technology for aeronautical applications

NT INERT ATMOSPHERES
CONTROLLED STABILITY
U STABILITY

CONTROLLERS
NT SERVOMECHANISMS
A versatile microprocessor controller for low cost helicopter applications
[ASME PAPER 81-GT-137] p0316 A81-30039
Pole placement with output feedback
p0458 A81-38899
Modern control synthesis applied to the longitudinal decoupled motion of an aircraft
[AIAA 81-1839] p0555 A81-44123
A study of the performance of an Olson type active noise controller and the possibility of the reduction of cabin noise
[UTIAS-TN-228] p0552 N81-29924
CONVAIR MILITARY AIRCRAFT
U GENERAL DYNAMICS AIRCRAFT
U MILITARY AIRCRAFT
CONVECTION CURRENTS
Bird flight and airplane flight --- instruments to measure air currents and flight characteristics
[NASA-TM-75777] p0138 N81-14962
CONVECTIVE FLOW
Thermal and flow analysis of a convection air-cooled ceramic coated porous metal concept for turbine vanes
[NASA-TM-81749] p0376 N81-22056
CONVECTIVE HEAT TRANSFER
Development of a large-scale wind tunnel for the simulation of turbomachinery airfoil boundary layers
[ASME PAPER 81-GT-6] p0310 A81-29931
The predictability of turbine vane convection heat transfer
[AIAA PAPER 81-1435] p0566 A81-45892
Improvements in the determination of convective transfers from infrared thermography --- in wind tunnel tests
p0255 N81-18258
CONVERGENCE
On the convergence of unsteady generalized aerodynamic forces
[AIAA 81-0647] p0307 A81-29500
Topology of three-dimensional separated flows
[NASA-TM-81294] p0385 N81-23037
CONVERGENT NOZZLES
New interpretations of shock-associated noise with and without screech
p0178 A81-22527
New interpretations of shock-associated noise with and without screech
[NASA-TM-81590] p0032 N81-10807
CONVERGENT-DIVERGENT NOZZLES
On screeching jets exhausting from an axisymmetric supersonic nozzle
p0008 A81-11616
Calibration of the high speed wind tunnel TVM 150 in the supersonic range
p0016 A81-11778
Attainability of an attached flow in a nozzle with heavily curved walls
p0054 A81-13548
Transonic flows of a multireacting gas mixture through a Laval nozzle
p0225 A81-23909
Some optimization problems of internal aerodynamics
p0237 A81-26120
Numerical solution of the direct one-dimensional problem of a critical flow in nozzles
p0288 A81-28578
Effectiveness of a gas curtain in Laval nozzles under nonrated flow conditions
p0417 A81-36737
Modeling of 2D-nozzle plume for IR signature prediction under static conditions
[AIAA PAPER 81-1108] p0459 A81-39107
Subsonic/supersonic nonvectored aeropropulsive characteristics of nonaxisymmetric nozzles installed on an F-18 model
[AIAA PAPER 81-1445] p0504 A81-40878
Development of exhaust nozzle internal performance prediction techniques for advanced aircraft applications
[AIAA PAPER 81-1490] p0506 A81-40908
Flight effects on supersonic convergent-divergent nozzle jet noise
[AIAA PAPER 81-2027] p0623 A81-49728
Investigation of convergent-divergent nozzles applicable to reduced-power supersonic cruise aircraft
[NASA-TP-1766] p0139 N81-14972
Effects of sidewall geometry on the installed performance of nonaxisymmetric convergent-divergent exhaust nozzles
[NASA-TP-1771] p0185 N81-15976
Aeropropulsive characteristics of twin nonaxisymmetric vectoring nozzles installed with forward-swept and aft-swept wings --- in the Langley 16 Foot Transonic Tunnel
[NASA-TP-1778] p0261 N81-19019
CONVERTAPLANES
U V/STOL AIRCRAFT
CONVEXITY
An experimental investigation of separating flow on a convex surface
p0230 A81-24488
Predicted and experimental steady and unsteady transonic flows about a biconvex airfoil
[NASA-TM-81262] p0258 N81-18742
CONVEYORS
System for refurbishing and processing parachutes
[NASA-CASE-KSC-11042-1] p0138 N81-14967
COOLANTS

NT FILM COOLING
NT GAS COOLING
NT LIQUID COOLING
NT SPACE COOLING (BUILDINGS)
NT SURFACE COOLING
NT SWEAT COOLING
Investigation of the cooling of the turbine rotor blade of a gas-turbine power system
p0465 A81-40020
Application of model laws when determining the heat transfer coefficients by experiments on cooled turbine blades
p0089 N81-12998
Design and fabrication of a stringer stiffened discrete-tube actively cooled panel for a hypersonic aircraft
[NASA-CR-3403] p0279 N81-19484
COOLING FINS
New developments in compact plate-fin heat exchangers
p0613 A81-48062
COOLING SYSTEMS
Turbine blade technology - Present and future
[ASME PAPER 80-C2/AERO-10] p0116 A81-18639
Film cooling performance of liner cooling devices
p0293 A81-29075
Turbine blade cooling research at the von Karman Institute for Fluid Dynamics
p0293 A81-29076
An investigation of a preswirled cooling airflow to a turbine disc by measuring the air temperature in the rotating channels
[ASME PAPER 81-GT-132] p0316 A81-30035
The problem of hoar-frost formation in aircraft fuel tanks
p0319 A81-30159
Computer calculation of the characteristics of a hybrid system for the cooling of gas turbine blades
p0459 A81-39217
Improved combustor durability - Segmented approach with advanced cooling techniques
[AIAA PAPER 81-1354] p0501 A81-40836
Thermodynamic comparison of the efficiencies of semiclosed- and open-loop air cooling systems of gas turbine engines
p0509 A81-41029
Full-scale study of the cooling system aerodynamics of an operating piston engine installed in a light aircraft wing panel
[SAE PAPER 810623] p0523 A81-42777
Avionics thermal integration for the Boeing 767 airplane
p0570 A81-46478
Analysis of the operation of air turborefrigeration plants and their use for on-the-ground air-conditioning of aircraft
p0614 A81-48196
An experimental investigation of the aerodynamics and cooling of a horizontally-opposed air-cooled aircraft engine installation
[NASA-CR-3405] p0372 N81-22015

Cooling system for high speed aircraft
[NASA-CASE-LAR-12406-1] p0485 N81-26114
COORDINATE SYSTEMS
U COORDINATES
COORDINATE TRANSFORMATIONS
A new method for torsion of shaft with variable diameter using non-orthogonal curvilinear coordinates and its application
[AIAA 81-0477] p0300 A81-29378
Orthogonal multiblade coordinates
p0453 A81-38021
The role of the earth's shape in navigation - An example

A practical method for predicting flight-by-flight crack growth in fighter type aircraft for damage tolerance assessment
p0013 A81-11659
Crack propagation in panels of pressurized fuselages upon simultaneous action of cyclic loading by pressurization and high-frequency vibrations
p0054 A81-13612
The effect of cyclic loading on the apparent cleavage fracture toughness of 1Cr-Mo-V rotor steel
p0108 A81-17480
Prediction methods for fatigue crack growth in aircraft material
p0110 A81-18777
Effect of load spectrum variables on fatigue crack initiation and propagation; Proceedings of the

Symposium, San Francisco, Calif., May 21, 1979
p0172 A81-21730
An engineering model for assessing load sequencing effects --- cracks in aircraft structures
p0172 A81-21737
Effect of transport aircraft wing loads spectrum variation on crack growth
p0172 A81-21738
Effect of gust load alleviation on fatigue and crack growth in ALCLAD 2024-T3
p0172 A81-21739
Effects of fighter attack spectrum on crack growth
p0172 A81-21741
Definition of loading sequence for full scale fatigue test
p0180 A81-22626
Ductile fracture mechanic assessments of 2219-T851, 2024-T3 and 7075-T6 aluminum alloys
p0180 A81-22628
Crack propagation in lugs
p0180 A81-22629
Crack growth propagation under variable amplitude loading in aerospace structures
p0181 A81-22632
Study of a crack propagation on the flap rail of a transport aircraft
p0181 A81-22633
Determination of aircraft structural inspection intervals
p0230 A81-24285
Research on fatigue at the Department of Aerospace Engineering of the Delft University
p0232 A81-24939
Comparison of 2024 and 7475 aluminum alloy sheet for tension-critical aircraft structures
p0232 A81-24942
Laws of unstable crack growth under cyclic loading
p0236 A81-25701
Simple methods of determining stress intensity factors
p0289 A81-28984
Statistical crack growth in durability and damage tolerant analyses
[AIAA 81-0492] p0300 A81-29382
An application of the energy release rate concept to crack growth in attachment lugs
[AIAA 81-0491] p0302 A81-29420
Experimental determination of the stress intensity factor for cracks with a curvilinear front in complex parts /gas turbine blades/
p0351 A81-31264
Developments in the analysis and repair of cracked and uncracked structures
p0354 A81-31561
In-flight fatigue crack monitoring using acoustic emission
p0361 A81-32857
Crack growth model for flight-type loading
p0460 A81-39247
Predicting fatigue crack growth on aircraft structures
[SAE PAPER 810593] p0520 A81-42752
A practical probabilistic method for evaluating the fail-safeness of structures that may fail due to fatigue
p0612 A81-47888
Disk residual life studies. Part 1: F100 1st-stage turbine disk (IN100)
[AD-A089791] p0036 N81-11041
Flight simulation environmental fatigue crack propagation in 2024-T3 and 7475-T761 aluminum --- wing panels for transport aircraft
[NLR-MP-80003-U] p0043 N81-11415
Flight simulation environmental fatigue crack propagation in 2024-T3 and 7475-T761 aluminum
[NLR-MP-80003-U] p0086 N81-12477
Environment-load interaction effects on crack growth in landing gear steels
[AD-A093803] p0218 N81-17242
A crack-closure model for predicting fatigue-crack growth under aircraft spectrum loading
[NASA-TM-81941] p0257 N81-18412
Method for computation of structural failure probability for an aircraft
[AD-A098294] p0426 N81-24050
Theoretical and experimental studies of crack propagation --- aircraft construction materials
[SNIAS-802-111-107] p0437 N81-24482
The fatigue crack growth under variable amplitude loading in built-up structures
[AD-A098417] p0446 N81-25437
Fatigue analysis of composite materials using the fail-safe concept
p0487 N81-26131
Fatigue crack growth in 7475-T7651 material under flight simulation loading. Information from a Douglas report --- effect of transport/bomber loads spectrum on crack growth
[VTH-M-392] p0542 N81-28493

CRITICAL VELOCITY
Problem of rotor passing through critical speed with gyroscopic effect. III - Case of rotating shaft on flexible supports
p0228 A81-24089
Concerning one self-similarity property in flutter analysis
p0413 A81-36464
The high-speed propeller program
p0185 N81-15972
Cold-air investigation of first stage of 4-1/2-stage, fan drive turbine with average stage-loading factor of 4.66
[NASA-TP-1780] p0195 N81-16050

CROSS CORRELATION
Accuracy of noise-modulated radio altimeter
p0359 A81-32694
Correlation of helicopter noise levels with physical and performance characteristics
[AD-A093428] p0221 N81-17852
Flap noise characteristics measured by pressure cross correlation techniques
p0259 N81-18800

CROSS COUPLING
Antenna-to-antenna coupling in aircraft radio systems
p0057 A81-14280
Wind tunnel determination of dynamic cross-coupling derivatives - A new approach
p0413 A81-35927
A preliminary flight investigation of cross-coupling and lateral damping for nap-of-the-earth helicopter operations
p0574 A81-46626
Sensitivity of aircraft motion to cross coupling and acceleration derivatives
p0592 N81-31120

CROSS FLOW
Vector and scalar characteristics of opposing jets discharging normally into a cross-stream
p0110 A81-17997
Three-dimensional boundary layer transition via the mechanisms of 'attachment line contamination' and 'cross flow instability'
p0115 A81-18122
The linear instability due to the compressible crossflow on a swept wing
p0170 A81-21160
The effect of sound on the vortex-shedding from a circular cylinder - Acoustical vibrations directed along axis of cylinder
p0233 A81-25312
Streamwise flow and heat transfer distributions for jet array impingement with crossflow
[ASME PAPER 81-GT-77] p0313 A81-29985
Aerodynamic estimation techniques for aerostats and airships
[AIAA 81-1339] p0457 A81-38542
Semi-empirical analysis of liquid fuel distribution downstream of a plain orifice injector under cross-stream air flow
[AIAA PAPER 81-1467] p0505 A81-40087
Vertical momentum of the fountain produced by multijet vertical impingement on a flat ground plane
p0529 A81-43396
Time dependent Navier-Stokes solution of a turbulent gas jet ejected from a rectangular orifice into a high-subsonic crossflow
p0130 N81-14964
Aerodynamic side-force alleviator means
[NASA-CASE-LAR-12326-1] p0130 N81-14968
Pressure and force data for a flat wing and a warped conical wing having a shockless recompression at Mach 1.62
[NASA-TP-1759] p0372 N81-22016

The effect of boundary layer growth on the stability of compressible flows
p0587 N81-30389

CROSSTALK

Crosstalk levels of speech plus data in Remote Communication Air-Ground (RCAG)
[AD-A103351] p0636 N81-33182

CRUCIFORM WINGS

Aerodynamic effects of body slots on a guided projectile with cruciform surfaces
[AIAA PAPER 79-1658] p0066 A81-15887

Solar powered aircraft
[NASA-CASE-LAR-12615-1] p0628 N81-32138

CRUDE OIL

Effect of refining variables on the properties and composition of JP-5
[AD-A093842] p0219 N81-17281

Impact of changing fuel characteristics on supersonic cruise airplane
p0248 N81-18018

CRUISE MISSILES

Cruise-missile-carrier navigation requirements
p0116 A81-18576

High altitude launch of the Cruise Missile
p0179 A81-22608

Firebrand ramjet propulsion system development
[AIAA PAPER 81-1486] p0506 A81-40904

Impact of terrain correlation elevation reference data on Boeing's Air Launched Cruise Missile
p0517 A81-42439

Application of the joined wing to cruise missiles
[AD-A096450] p0441 N81-25068

Cruise missile engine program contract data requirements list sequence number 95. Qualification test report. Volume 39: Vibration and mission simulation testing on engine 828. XF-107-WR-400 cruise missile engine
[AD-A102257] p0600 N81-31220

CRUISING FLIGHT

Transonic maneuver/cruise airfoil design employing active diffusion control
p0239 A81-26511

The supersonic fan engine - An advanced concept in supersonic cruise propulsion
[AIAA PAPER 81-1599] p0508 A81-40973

Aerodynamic design data for a cruise-matched high performance single-engine airplane
[SAE PAPER 810625] p0523 A81-42779

The improvement of aircraft specific range by periodic control
[AIAA 81-1748] p0553 A81-44080

Fuel optimal aircraft trajectories with fixed arrival times
[AIAA 81-1749] p0554 A81-44081

Prediction of range and endurance of jet aircraft at constant altitude
p0611 A81-47725

Improved aircraft cruise by periodic control
p0034 N81-11030

The impact of materials technology and operational constraints on the economics of cruise speed selection
p0248 N81-18021

Investigation of powered nacelles on a high aspect ratio NASA supercritical wing, phase 2 --- Langley 8 Foot Transonic Pressure Tunnel
p0260 N81-19008

Application of linear quadratic control in reduction of aerodynamic forces on aircraft
p0332 N81-20061

Aerodynamic investigation of C-141 leading edge modifications for cruise drag reduction, test 2
[AD-A099662] p0492 N81-27051

Numerical simulation of wing-fuselage interference
[AIAA PAPER 81-0048] p0158 A81-20564
The aerodynamics of inverted leading edge flaps on delta wings
[AIAA PAPER 81-0356] p0165 A81-20775
A parametric study of the static longitudinal aerodynamic characteristics of parallel lift delta wing configurations at low Reynolds numbers
[AIAA PAPER 81-0409] p0168 A81-20814
On some methods of supersonic unsteady lifting surface analysis
[AIAA 81-0644] p0307 A81-29497
On the theory of a wing with small aspect ratio in a hypersonic flow
p0309 A81-29860
Effectiveness of leading-edge vortex flaps on 60 and 75 degree delta wings
p0352 A81-31368
Calculation of supersonic flow past interfering wings
p0413 A81-36455
The effect of the aspect ratio of delta wings on the structure of the near vortex wake
p0413 A81-36467
Calculation of flow past wings with supersonic sharp edges
p0418 A81-36944
Effects of yaw on leading edge vortex flap aerodynamics
[AIAA PAPER 81-1660] p0526 A81-43147
Effect of leading-edge vortex flaps on aerodynamic performance of delta wings
p0559 A81-44424
A vortex-lattice method for calculating longitudinal dynamic stability derivatives of oscillating delta wings
[AIAA PAPER 81-1876] p0561 A81-44570
Investigations of vortex formation on wings with cropped leading edges
[DGLR PAPER 81-046] p0610 A81-47601
Vortex bursting on slender delta wings in transonic flow and its influence on missile aerodynamic characteristics
[DGLR PAPER 81-047] p0611 A81-47622
Measured pressure distributions and shock shapes on a simple delta wing
p0617 A81-48479
Experimental study of supersonic viscous leeside flow over a slender delta wing
[NASA-TM-81248] p0133 N81-14265
Experimental investigation of the flow on the suction side of a thin Delta wing
[NASA-TM-75897] p0338 N81-21024
Strake/delta wing interactions at high angles of attack
[NASA-CR-166183] p0483 N81-26072
Correlation of predicted and flight derived stability and control derivatives with particular application to tailless delta wing configurations --- application to the space shuttle orbiter
[NASA-TM-81361] p0490 N81-26154
Subsonic pitch-up alleviation on a 74 deg delta wing
[NASA-CR-165749] p0584 N81-30137
Experimental and theoretical study of three interacting, closely-spaced, sharp-edged 60 deg delta wings at low speeds
[NASA-CR-3460] p0635 N81-33160

DEMAND (ECONOMICS)
A scheduling model for the aerial relay system
[NASA-CR-159387] p0249 N81-18032
Predicting the impacts of new technology aircraft on international air transportation demand
[NASA-CR-165654] p0594 N81-31160

DEMONSTRATION
U PROVING

DENDRITIC CRYSTALS
Metallographic analysis techniques used during the Cast Aluminum Structures Technology /CAST/ program --- microstructure of aluminum cast alloy
p0531 A81-43650

DENSIFICATION
Development of high strength silicon carbide materials for gas turbine applications
[BMFT-FB-T-80-025] p0497 N81-27102

DENSITY (NUMBER/VOLUME)
NT PACKING DENSITY
NT PARTICLE DENSITY (CONCENTRATION)

DENSITY DISTRIBUTION
The method for calculating the fuel concentration field in the downstream positions of the pressure jet atomizer in the high temperature gas-stream
p0224 A81-23731

DEPENDENCE
NT TEMPERATURE DEPENDENCE
NT TIME DEPENDENCE

DEPLOYMENT
AV-8B operational features for rapid deployment
[SAE PAPER 801228] p0405 A81-34231

DEPOSITION
NT ELECTROPLATING
Combustion system processes leading to corrosive deposits
[NASA-TM-81752] p0391 N81-23243

DEPOSITS
Determination of coking rate in jet fuel
p0570 A81-46448

DEPRESSURIZATION
U PRESSURE REDUCTION

DEPTH PERCEPTION
U SPACE PERCEPTION

DESCENT
NT PARACHUTE DESCENT
Development of simplified airborne computations for fuel conservative descents in a time-based metered air traffic environment
[SAE PAPER 810642] p0524 A81-42785
Glideslope descent-rate cuing to aid carrier landings
[AD-A092193] p0192 N81-16033
Test results of flight guidance for fuel conservative descents in a time-based metered air traffic environment --- terminal configured vehicle
p0264 N81-19036
A flight investigation of the ultra-deep-stall descent and spin recovery characteristics of a 1/6 scale radiocontrolled model of the Piper PA38 Tomahawk
[NASA-CR-156871] p0343 N81-21084
An investigation of reports of Controlled Flight Toward Terrain (CFTT)
[NASA-CR-166230] p0546 N81-29108

DESCENT TRAJECTORIES
Air traffic management enhancement through new avionics /4-D/
p0099 A81-16583
High altitude launch of the Cruise Missile
p0179 A81-22608
Investigation of landing flare in the presence of wind shear

[ESA-TT-631] p0077 N81-12080

DESIGN ANALYSIS

Design of airfoils in incompressible viscous flows by numerical optimization p0001 A81-10096

Possibilities for the valuation of different combat aircraft configurations with respect to flight mechanics p0007 A81-11607

Airbus Industrie's heavenly twins - A310 and A300-600 p0018 A81-12348

Improving the mechanical load matching of wind energy converters p0055 A81-13870

Optimum selection of main parameters for the reverse design of a supersonic military aircraft p0102 A81-17047

UK pavement design and evaluation - A new approach p0113 A81-18076

Effects of design variables on spoiler control effectiveness, hinge moments, and wake turbulence [AIAA PAPER 81-0072] p0159 A81-20501

A computer-aided design system geared toward conceptual design in a research environment --- for hypersonic vehicles [AIAA PAPER 81-0372] p0166 A81-20789

The design, testing, certification and production of an emergency parachute for use in light aircraft [AIAA PAPER 81-0413] p0168 A81-20817

Standardisation - An alternative approach to ATC automation p0177 A81-22192

Analytic design of regulators with limitations p0235 A81-25688

Rotor-tip leakage. II - Design optimization through viscous analysis and experiment [ASME PAPER 81-GT-72] p0313 A81-29981

Inverse or design calculations for non-potential flow in turbomachinery blade passages [ASME PAPER 81-GT-78] p0314 A81-29986

Sensitivity of turbine blade temperatures to tolerances of design variables [ASME PAPER 81-GT-90] p0314 A81-29997

Life cycle cost before, during and after the design of aircraft propulsion systems [ASME PAPER 81-GT-111] p0315 A81-30016

New features in the design of axial-flow compressors with tandem blades [ASME PAPER 81-GT-113] p0315 A81-30017

Design analysis of high-efficiency low-stress ceramic gas turbines [ASME PAPER 81-GT-130] p0316 A81-30034

A versatile microprocessor controller for low cost helicopter applications [ASME PAPER 81-GT-137] p0316 A81-30039

Flight control system design through constrained output feedback p0321 A81-30264

A design analysis technique for evaluating size and weight of V/STOL lift fans [SAWE PAPER 1386] p0354 A81-31402

Application of an aerodynamic configuration modeling technique to the design and analysis of X-Wing aircraft configurations p0356 A81-32013

The art of designing experimental aircraft - An overview [AIAA PAPER 81-0944] p0363 A81-32939

SIMCAT - A modular air traffic control simulator p0364 A81-33149

Digital computer simulation of aircraft hydraulic systems [SAE PAPER 801193] p0402 A81-34203

Full authority digital electronic control application to a variable cycle engine [SAE PAPER 801203] p0403 A81-34212

NASA aeronautics R&T - A resource for aircraft design [AIAA PAPER 81-0925] p0408 A81-34363

Systems costing of hovercraft, hydrofoils and wing-in-ground effect machines. III p0412 A81-35724

Design characteristics of Michelson interferometers used on the AFGL NKC-135 infrared flying laboratory p0463 A81-39505

Design considerations for U.S. Coast Guard search and surveillance Forward Looking Infrared /FLIR/ system p0463 A81-39647

Development of antiresonance force isolators for helicopter vibration reduction p0467 A81-40091

Boeing plays safe --- Boeing 737-300 design p0480 A81-40455

Some experimental study on parachute dynamics by utilizing a deceleration system simulator p0481 A81-40471

The use of engine operating experience in the preliminary design of aircraft gas turbine combustion systems [AIAA PAPER 81-1399] p0515 A81-42189

Factors influencing the predicted performance of advanced propeller designs [AIAA PAPER 81-1564] p0516 A81-42210

Materials and processes for a small remotely piloted vehicle p0532 A81-43663

Engine life and usage methodologies for conceptual design [AIAA PAPER 81-1651] p0533 A81-43937

Development of airframe structural design loads prediction techniques for flexible military aircraft - Applications [AIAA PAPER 81-1697] p0535 A81-43954

Project Bandit - An economical, high performance business aircraft for the 1990s p0563 A81-44850

Output predictive algorithmic control - Precision tracking with application to terrain following p0564 A81-45573

Design, analyses, and model tests of an aeroelastically tailored lifting surface [AIAA PAPER 81-1673] p0566 A81-45974

Soviet practice in designing and procuring military aircraft p0567 A81-46340

Analytical and computer-aided design of automated systems for the testing of aircraft engines --- Russian book p0578 A81-46850

Evaluation of section properties for hollow composite beams [PAPER-NR-35] p0031 N81-10454

ATARS implementation tradeoff [AD-A089977] p0034 N81-11026

The European Transonic Wind tunnel ETW p0038 N81-11064

The implications of laboratory accelerated conditioning of carbon fibre composites p0039 N81-11129

Design to Cost and Life Cycle Cost [AGARD-CP-289] p0045 N81-11902

Reliability-centered maintenance p0047 N81-11917

Design to cost and systems, LCC p0047 N81-11920

Summary of AGARD Lecture Series 107: The Application of Design to Cost and Life Cycle Cost to Aircraft Engines p0047 N81-11926

The changing scene of structural airworthiness [AAAF-NT-79-24] p0077 N81-12076

The design development and operation of gas turbine radio telemetry systems [EIR-00733] p0077 N81-12082

Reverse flow, pre-rotation and unsteady inlet flow in centrifugal pumps [VKI-PREPRINT-1979-15] p0085 N81-12433

Application of a method for aerodynamic analysis and design of horizontal axis wind turbines, part 1 [FFA-TN-AU-1499-PT-1] p0086 N81-12633

Aerodynamic design of electric and hybrid vehicles: A guidebook [NASA-CR-163744] p0088 N81-12943

NASA contributions to radial turbine aerodynamic analyses [NASA-TM-81644] p0090 N81-13019

Design analysis of wide-body aircraft [GPO-60-652] p0092 N81-13045

Fundamentals of conceptual design optimization of subsonic transport aircraft [VTH-LR-292] p0128 N81-13951

Economic evaluation of flying-qualities design criteria for a transport configured with relaxed static stability
[NASA-TP-1760] p0130 N81-13968

Full potential solution of transonic quasi-3-D flow through a cascade using artificial compressability
[NASA-TM-81637] p0140 N81-14980

The resonance frequencies of ventilated wind tunnels
[ARC-R/M-3841] p0144 N81-15009

A system for aerodynamic design and analysis of supersonic aircraft. Part 4: Test cases
[NASA-CR-3354] p0185 N81-15977

Design and experimental verification of a transonic wing for a transonic aircraft
p0188 N81-16003

Use of constrained optimization in the conceptual design of a medium-range subsonic transport
[NASA-TP-1762] p0193 N81-16039

Cold-air investigation of first stage of 4-1/2-stage, fan drive turbine with average stage-loading factor of 4.66
[NASA-TP-1780] p0195 N81-16050

Test and evaluation of improved aircrew restraint systems for combat helicopers
p0205 N81-17017

Helmet mounted displays: Design considerations
p0213 N81-17073

Multi-plane high speed balancing techniques and the use of a high specific stiffness Ti-Borsic material for vibration control
[AD-A093122] p0215 N81-17092

Structural concept trends for commercial supersonic cruise aircraft design
p0246 N81-18006

Historical overview of V/STOL aircraft technology
[NASA-TM-81280] p0272 N81-19100

Regenerative engine analysis program
[AD-A095144] p0274 N81-19123

Description of recent changes in the Langley 6- by 28-inch transonic tunnel
[NASA-TM-81947] p0391 N81-23096

Civil component program Wing Section. Transonic wing development --- for the european airbus
[BMFT-FB-W-80-021] p0426 N81-24052

Civil component program Wing Section. The design of the transonic airfoil Va 2
[BMFT-FB-W-80-023] p0426 N81-24053

The AIRBUS hydraulic systems
[SNIAS-802-111-111] p0427 N81-24055

Theoretical and experimental studies of crack propagation --- aircraft construction materials
[SNIAS-802-111-107] p0437 N81-24482

The supercritical profile of the supercritical wing
[NASA-TM-76605] p0494 N81-27075

Final design and fabrication of an active control system for flutter suppression on a supercritical aeroelastic research wing
[NASA-CR-165714] p0498 N81-27114

Adaptive finite element technology in integrated design and analysis --- aircraft structures design
[NASA-CR-164560] p0543 N81-28810

Avionics computer system support at Ogden ALC
p0320 A81-30243
A Single Processor Synchronous Executive derived from the DAIS executive --- Digital Avionics Information System
p0324 A81-30326
Microprocessor-based digital air data computer for flight test
p0361 A81-32858
Air data computer for the measurement and evaluation of data of flight physics
p0451 A81-37648
The application of computers to navigation - New developments employing microprocessors
p0565 A81-45761
Failure management for the SAAB Viggen JA37 aircraft
p0042 N81-11273
A digital-analog hybrid system and its application to the automatic flight control system simulation research
[NASA-TM-76457] p0377 N81-22060
DIGITAL DATA
A technique for recovering nonsynchronized data from a digital flight data recorder
p0328 N81-20020
DIGITAL FILTERS
A new technique for tracking sequences of digitized images
p0156 A81-20508
Analytical investigation of time correction in alpha-beta tracking filters with application to en route tracking
[AD-A099218] p0484 N81-26090
Characteristics of a digital filter for a precision DME system in microwave landing systems
[FUB-43-1980] p0628 N81-32136
DIGITAL NAVIGATION
Design of disturbance-rejection controllers for linear multivariable discrete-time systems using entire eigenstructure assignment --- onboard digital flight system of F-4 aircraft
p0155 A81-20454
Flight test evaluation of a digital controller used in a VTOL automatic approach and landing system
p0179 A81-22549
Strapdown navigation comes of age
[SAE PAPER 801167] p0399 A81-34182
Electronic displays and computerized NAV systems for commuters and business aircraft
p0407 A81-34330
Summary of interface testing of the digital AN/ASN-123 tactical navigation avionic system in the SH-3H helicopter
[AHS 80-18] p0474 A81-40149
Low-frequency radio navigation for the Army's Mobile Automated Field Instrumentation System /MAFIS/
p0517 A81-42437
Output predictive algorithmic control - Precision tracking with application to terrain following
p0567 A81-46280
Onboard and ground test of an autonomous navigation system based on terrain correlation
p0544 N81-29069
DIGITAL RADAR SYSTEMS
Target detection and parameter estimation in surveillance radars using MTI-FFT processing
p0152 A81-20094
New techniques and development trends in the system architecture of EDP systems for radar data processing and airspace control
p0153 A81-20103
F-16 improvement program - Making the digits count
p0241 A81-26931
A new generation IFF - The AN/APX-100/V/ transponder
p0350 A81-31132
Digital data bases for visual and radar simulation
[MBB-UA-549/80-OE] p0585 N81-30143
Development of a ground signal processor for digital synthetic array radar data
[NASA-CR-161074] p0602 N81-31421
DIGITAL SIMULATION
The digital simulation of stability for multi-stage axial compressor
p0225 A81-23856
Digital computer simulation of generalised fault conditions on aircraft electrical power systems
p0322 A81-30285

Digital computer simulation of aircraft hydraulic systems
[SAE PAPER 801193] p0402 A81-34203
A nonlinear propulsion system simulation technique for piloted simulators
p0454 A81-38064
Simulation of Heavy Lift Airship dynamics over large ranges of incidence and speed
[AIAA 81-1335] p0457 A81-38540
Digital simulation for energy conservation in a large wind tunnel plant system
p0613 A81-48003
A technique for the implementation of nonlinear models as real-time digital simulations --- with application to aircraft turbine engine design
p0615 A81-48333
The evolution of real-time digital simulation of aircraft for training applications
p0615 A81-48358
Model following control of gas turbine engines
p0624 A81-49900
Simulation and control engineering studies of NASA-Ames 40 foot by 80 foot/80 foot by 120 foot wind tunnels
[NASA-CR-152145] p0276 N81-19136
A nonlinear propulsion system simulation tehnique for piloted simulators
[NASA-TM-82600] p0390 N81-23085
A mathematical model for Vertical Attitude Takeoff and Landing (VATOL) aircraft simulation. Volume 1: Model description application
[NASA-CR-166129-VOL-1] p0538 N81-28084
A mathematical model for Vertical Attitude Takeoff and Landing (VATOL) aircraft simulation. Volume 2: Model equations and base aircraft data
[NASA-CR-166129-VOL-2] p0538 N81-28085
A mathematical model for Vertical Attitude Takeoff and Landing (VATOL) aircraft simulation. Volume 3: User's manual for VATOL simulation program
[NASA-CR-166129-VOL-3] p0538 N81-28086
A flight investigation of simulated data-link communications during single-pilot IFR flight. Volume 1: Experimental design and initial test
[NASA-CR-3461-VOL-1] p0595 N81-31171

DIGITAL SYSTEMS
NT DIGITAL NAVIGATION
NT DIGITAL RADAR SYSTEMS
Standardization in military system architecture
p0050 A81-13168
Avionic architectural standardization - Logistic support perspective
p0050 A81-13171
A new system for the study of visual information presentation in aeronautics - GIBI
p0100 A81-16688
The digital control system as part of an integrated accessory fit for future engines
p0104 A81-17505
System considerations in the implementation of digital control
[AAS 80-032] p0120 A81-19375
Robustness properties of a new multirate digital control system
[AIAA PAPER 81-0022] p0158 A81-20545
Design of guidance and control digital autopilots
p0183 A81-22973
Analysis and synthesis of the digital attitude control system of the aerospace vehicle
p0224 A81-23837
YC-14 digital flight control experience
p0320 A81-30246
The RLU - An advanced remote terminal for avionic systems
p0327 A81-30358
Airborne ground velocity determination by digital processing of electro-optical line sensor signals
p0358 A81-32496
Application of the parameter space method to aerospace vehicle digital control system design
p0359 A81-32642
Methods for the verification and validation of digital flight control systems
[SAE PAPER 801134] p0397 A81-34165
Flight control systems go digital - More than a binary mechanization of analog predecessors
[SAE PAPER 801166] p0399 A81-34181
Full Authority Digital Electronic Control turbofan engine demonstration
[SAE PAPER 801199] p0402 A81-34209
Full authority digital electronic control application to a variable cycle engine
[SAE PAPER 801203] p0403 A81-34212
Versatile and economical real-time simulation for digital flight control systems
[AIAA 81-0974] p0415 A81-36563
The digital core avionics system
p0472 A81-40132
NDEC - A control concept for helicopter gas turbines --- speed (N) based Digital Electronic Control
[AHS 80-44] p0477 A81-40171
Development of an integrated fault tolerant engine control
[AIAA PAPER 81-1365] p0502 A81-40845
Propulsion controls
p0079 N81-12095
Tower Cab Digital Display
[AD-A090616] p0091 N81-13042
A survey of computer simulations of digital avionics systems
[AD-A091943] p0195 N81-16049
Energy maneuverability display for the Air Combat Maneuvering Range/Tactical Training System (ACMR/TACTS)
[AD-A092974] p0208 N81-17041
Digital Avionics Information System (DAIS): Life Cycle Cost Impact Modeling System (LCCIM). A managerial overview
[AD-A093281] p0211 N81-17062
Multivariable control synthesis program: Control aspects of the F100 altitude demonstration of the multivariable control system
[AD-A093868] p0216 N81-17095
Ground and flight test experience with a triple redundant digital fly by wire control system --- installed in F-8C aircraft
p0259 N81-19006
V/STOL AND digital avionics system for UH-1H
[NASA-CR-152179] p0273 N81-19112
Experiences with flight recorders obtained by analyzing aircraft accidents
p0328 N81-20019
Flight tests of the microwave landing system multimode digital processor
[AD-A095449] p0332 N81-20056
V/STOLAND digital avionics system for XV-15 tilt rotor
[NASA-CR-152320] p0375 N81-22047
Experiences with a Flight Data Recording System (FDRS) in a German Airforce fighter bomber wing after field trials --- digital equipment
p0382 N81-23009
Digital Avionics Information System (DAIS). Volume 1: Impact of DAIS concept on life cycle cost
[AD-A097339] p0389 N81-23083
Digital Avionics Information System (DAIS). Volume 2: Impact of DAIS concept on life cycle cost. Supplement
[AD-A097438] p0390 N81-23084
The future cockpit of the next generation of civil aircraft --- Airbus A310 digital displays
[SNIAS-802-111-113] p0427 N81-24057
Requirements, technology and configuration evaluation for Crash Survivable Flight Data Recording (CSFDR) system
[AD-A097863] p0427 N81-24059
System digitization: Its effect in the cockpit --- on performance
[SNIAS-802-111-115] p0428 N81-24062
An airborne programmable digital to video converter interface and operation manual
[AD-A096422] p0446 N81-25691
Microprocessor system test and monitoring
p0497 N81-27108
Full authority digital electronic control turbofan engine demonstration
p0498 N81-27112
High speed multiplex bus protocol study
[AD-A102113] p0597 N81-31191
Crosstalk levels of speech plus data in Remote Communication Air-Ground (RCAG)
[AD-A103351] p0636 N81-33182

DIGITAL TECHNIQUES
Side lobe suppression with digital signal processing
p0152 A81-20092
Precision correlation tracking via optimal weighting functions
p0154 A81-20450

A digital technique for the analysis of the
response of compressor/duct systems in unsteady
flow
p0294 A81-29078
A flight test real-time GN-CG computing system
p0361 A81-32860
Structural optimization - Past, present and future
[AIAA PAPER 81-0897] p0362 A81-32922
Designing for aircraft structural crashworthiness
[AIAA PAPER 81-0803] p0367 A81-33802
Application of pulse code modulation technology to
aircraft dynamics data acquisition
[AIAA PAPER 81-1736] p0528 A81-43173
Digital controls in a large engine test facility
p0532 A81-43715
Flight test results for the F-8 digital
fly-by-wire aircraft control sensor analytic
redundancy management technique
[AIAA 81-1796] p0556 A81-44135
Digital data bases for visual and radar simulation
[MBB-UA-549/80-OE] p0585 N81-30143
Digital spectral analysis: A guide based on
experience with aircraft vibration
[RAE-TR-81014] p0605 N81-31588
DIGITAL TO ANALOG CONVERTERS
A six-channel quick-look unit for the aerodynamics
division NEI airborne data acquisition package
[AD-A089975] p0043 N81-11364
DIGITAL TO VOICE TRANSLATORS
A multiplexed digital voice intercommunications
system compatible with future voice conversion
techniques
p0605 N81-31474
DIGITIZERS
U ANALOG TO DIGITAL CONVERTERS
DIHEDRAL EFFECT
U LATERAL STABILITY
DIMENSIONAL ANALYSIS
Advancements in dimensional inspection of
helicopter gearboxes and transmission cases

DIRECT LIFT CONTROLS
Theoretical investigation of the influence of
spoiler dynamics on the handling qualities of an
aircraft with direct lift control
[DFVLR-FB-80-07] p0131 N81-13975
In-flight handling qualities investigation of A310
Airbus DLC-configurations on landing approach,
using the DFVLR-HFB 320 in-flight simulator
(variable stability aircraft) --- instrument
flight
[ESA-TT-630] p0276 N81-19135
Velocity vector control system augmented with
direct lift control
[NASA-CASE-LAR-12268-1] p0433 N81-24106
DIRECT POWER GENERATORS
NT SOLAR CELLS
NT THERMAL BATTERIES
DIRECTION FINDERS (RADIO)
U RADIO DIRECTION FINDERS
DIRECTIONAL ANTENNAS
NT RADAR ANTENNAS
NT SLOT ANTENNAS
DIRECTIONAL CONTROL
NT THRUST VECTOR CONTROL
A vehicle attitude control system forming the
error signal by way of the optimal rotation axis
p0224 A81-23732
Lateral-directional flying qualities of transport
aircraft
[AIAA PAPER 81-1387] p0561 A81-44579
The collision course: Conditions, guidance laws
and properties
[DFVLR-FB-80-06] p0127 N81-13942

Velocity vector control system augmented with
direct lift control
[NASA-CASE-LAR-12268-1] p0433 N81-24106
DIRECTIONAL SOLIDIFICATION (CRYSTALS)
Directionally solidified Soviet superalloy - ZHS6-K
p0532 A81-43770
Low-cost directionally-solidified turbine blades,
volume 2 --- TFE731-3 turbofan engine
[NASA-CR-159562] p0078 N81-12088
DIRECTIONAL STABILITY
NT GYROSCOPIC STABILITY
Helicopter tail configurations to survive tail
rotor loss
p0003 A81-10768
The possibility of improving the
lateral-directional characteristics of a
twin-engine aircraft by spoilers in the case of
sudden engine failure
p0049 A81-12967
Assessment of propeller influence on
lateral-directional stability of multiengine
aircraft
p0411 A81-35632
The flying qualities of aircraft with actively
augmented pitch and yaw stability
[ARC-R/M-3848] p0082 N81-12113
DIRECTIVITY
Helicopter noise contour development techniques
and directivity analysis
[AD-A093426] p0221 N81-17851
DIRECTORIES
U INDEXES (DOCUMENTATION)
DIRIGIBLES
U AIRSHIPS
DISCHARGE COEFFICIENT
Effect of the discharge circuit parameters on the
weight, dimensions, and energy characteristics
of the power supply source --- aircraft equipment
p0280 A81-28574
An experimental investigation of the thrust and
discharge characteristics of multinozzle
low-head ejectors
p0413 A81-35920
DISCRETE ADDRESS BEACON SYSTEM
Discrete Address Beacon System - The obvious
alternative
[SAE PAPER 800625] p0063 A81-15341
Performance evaluation of an interrogation-reply
scheduling technique for a discrete address
beacon system --- of radar surveillance and
aircraft communication in ATC
p0121 A81-19417
RTCA looks at DABS avionics
p0286 A81-28301
Discrete Address Beacon System
p0350 A81-31134
The Discrete Address Beacon System/Air Traffic
Control Radar Beacon System/ATCRBS IFF Mark 12
system (DABS/ATCRBS/AIMS) performance prediction
model
[AD-A089440] p0024 N81-10038
Impact of the discrete Address Beacon System
(DABS) on Air Traffic Control Radar Beacon
System (ATCRBS) performance in selected
deployments
[AD-A089611] p0025 N81-10039
Formats for DABS data link applications
[AD-A089963] p0034 N81-11028
Discrete Address Beacon System (DABS) receiver and
Air Traffic Control Radar Beacon System (ATCRBS)
and DABS processor subsystem tests
[AD-A094124] p0250 N81-18037
Active BCAS: Design and validation of the
surveillance subsystem
[AD-A095049] p0270 N81-19084
Arts 2 enhancement design alternative study
[AD-A096276] p0339 N81-21049
An update of the Discrete Address Beacon System
(DABS) alternatives study
[AD-A096264] p0340 N81-21052
Results of a Loran-C flight test using an absolute
data reference --- vhf omnirange navigation
system and discrete address beacon system
p0371 N81-22006
Potential effects of the introduction of the
discrete address beacon system data link on
air/ground information transfer problems
[NASA-CR-166165] p0373 N81-22037

Discrete Address Beacon System (DABS) data link capacity utilization
[AD-A098173] p0425 N81-24044
Evaluation of Discrete Address Beacon System (DABS) EMC
[PB81-154387] p0481 N81-25062
Discrete Address Beacon System (DABS) computer performance/test and evaluation
[AD-A099326] p0484 N81-26088
Discrete address beacon system data link capacity requirements
[AD-A101731] p0581 N81-30107
Multisite testing of the Discrete Address Beacon System (DABS)
[AD-A103575] p0636 N81-33181
En route discrete address beacon system/air traffic control (Build 1) technical testing
[AD-A103894] p0636 N81-33183

DISCRETE FUNCTIONS
Discrete-continuous variable structural synthesis using dual methods
p0066 A81-15894

DISHES
U PARABOLIC REFLECTORS

DISKS
Concept definition: Retirement for cause of F-100 rotor components

DRAG MEASUREMENT
Drag estimations for stream-line and cylindrical contour distortions on aircraft fuselages and train cars
[DGLR PAPER 80-116] p0121 A81-19399
Performance of aircraft pneumatic tyres in soft soil
p0226 A81-24000
Contribution to the determination of the drag coefficient for air breathing flight vehicles on the basis of wind tunnel measurements
[DGLR PAPER 81-036] p0610 A81-47604
Determination of thrust and throttle-dependent drag for fighter aircraft
[AIAA PAPER 81-1692] p0617 A81-48817
Drag increment due to rear fuselage upsweep
[ESDU-80006] p0021 N81-10001
Wind-tunnel measurements and comparison with flight of the boundary layer and heat transfer on a hollow cylinder at Mach 3
[NASA-TP-1789] p0140 N81-14975
Skin friction measuring device for aircraft
[NASA-CASE-FRC-11029-1] p0210 N81-17057
DRAG REDUCTION
Vortex drag reduction by aft-mounted diffusing vanes
p0012 A81-11647
Leading-edge 'Vortex Flaps' for enhanced subsonic aerodynamics of slender wings
p0012 A81-11648
The effects of noise on laminar flow control drag reduction systems
p0058 A81-14390
Transonic axisymmetric bodies with minimal wave drag
p0102 A81-17048
Reduction of profile drag by blowing out through peg holes in areas of streamline separation bubbles
[DGLR PAPER 80-103] p0120 A81-19392
Drag reduction through formation flight
[DGLR PAPER 80-106] p0120 A81-19393
Procedures for optimal drag design of camber and flap deflection in supersonic regions with consideration to geometric limits
[DGLR PAPER 80-110] p0120 A81-19396
Drag reduction - Jet breakup correlation with kerosene-based additives
p0225 A81-23923
The influence of a wake splitter plate on the aerodynamic characteristics of a two-dimensional cylinder
p0226 A81-23949
Influence of zero-lift downwash on the relation between minimum-drag center-of-gravity position and inherent stability boundary
p0235 A81-25648
Viscous flow drag reduction; Symposium, Dallas, Tex., November 7, 8, 1979, Technical Papers
p0238 A81-26501
Drag reduction of an oscillating flat plate with an interface film
p0239 A81-26504
Large-eddy breakup scheme for turbulent viscous drag reduction
p0239 A81-26507
Modification in drag of turbulent boundary layers resulting from manipulation of large-scale structures
p0239 A81-26508
Drag characteristics of V-groove and transverse curvature riblets
p0239 A81-26510
Transonic maneuver/cruise airfoil design employing active diffusion control
p0239 A81-26511
Low drag airfoil design utilising passive laminar flow and coupled diffusion control
p0239 A81-26512
Design considerations of advanced supercritical low drag suction airfoils
p0240 A81-26514
Compliant surfaces - Introduction
p0240 A81-26515
Wing flapping with minimum energy
p0283 A81-27889
The optimal lift-drag ratio of a civil aircraft
[AAAF PAPER NT 80-35] p0369 A81-33923
Improvement of the energy efficiency of helicopters
[AAAF PAPER NT 80-33] p0369 A81-33933
A study of the effect of aft fuselage shape on helicopter drag
p0470 A81-40116
Vortex drag reduction by diffusing vanes - Design for the 'Thrush' agricultural aircraft
[SAE PAPER 810605] p0521 A81-42762
A synopsis of the Navy A-7 Aircraft Fuel Conservation program
[AIAA PAPER 81-1601] p0535 A81-43949

Assessment of variable camber for application to transport aircraft [NASA-CR-158930] p0071 N81-12016
Aircraft surface coatings study: Energy efficient transport program --- sprayed and adhesive bonded coatings for drag reduction [NASA-CR-158954] p0084 N81-12225
Aerodynamic design of electric and hybrid vehicles: A guidebook [NASA-CR-163744] p0088 N81-12943
Optimal bodies for minimum total drag at supersonic speeds [AD-A091235] p0091 N81-13036
Laminar-airfoils for transport aircraft [DFVLR-MITT-80-07] p0129 N81-13952
Interference aspects of the A310 high speed wing configuration p0188 N81-16001
Design and experimental verification of a transonic wing for a transonic aircraft p0188 N81-16003

Dynamic response of a forward-swept-wing model at
angles of attack up to 15 deg at a Mach number
of 0.8 --- Langley transonic dynamics tunnel tests
[NASA-TM-81863] p0085 N81-12448
Performance verification of the superjet laminar
angular rate sensor
[AD-A091089] p0091 N81-13040
An investigation of the dynamic stalling
characteristics of rotating axial-flow
compressor blades
p0093 N81-13054
The effects of warhead-induced damage on the
aeroelastic characteristics of lifting surfaces.
Volume 1: Aeroelastic effects
[AD-A091674] p0129 N81-13955
Experimental analysis and methods to determine the
dynamic behavior of propulsion shafting systems
p0145 N81-15401
Rotor model for verification of computation methods
[ISD-262] p0145 N81-15467
Modal analysis for aircraft response to runway
surface roughness
[AD-A092057] p0194 N81-16043
Nuclear blast response of airbreathing propulsion
systems. Laboratory measurements with an
operational J-85-5 turbojet engine
[AD-A092229] p0196 N81-16063
Evaluation of bird load models for dynamic
analysis of aircraft transparencies
[AD-A092909] p0204 N81-16995
Combustor liner durability analysis
[NASA-CR-165250] p0213 N81-17079
High bypass turbofan component development,
modification 2
[AD-A093156] p0215 N81-17093
A study of State Feedback Implicit Model following
control for VSTOL aircraft
[AD-A093253] p0216 N81-17099
Wind loading and response of a high-rise building
[CCNF-810104-1] p0256 N81-18259
Review of antiskid and brake dynamics research
p0268 N81-19066
Flying-qualities criteria for wings-level-turn
maneuvering during an air-to-ground weapon
delivery task
[NASA-TM-81266] p0342 N81-21083
Transonic flutter and gust-response tests and
analyses of a wind-tunnel model of a torsion
free wing airplane
[NASA-TM-81961] p0388 N81-23072
Blade loss transient dynamics analysis. Volume 3:
User's manual for TETRA program
[NASA-CR-165373-VOL-3] p0496 N81-27091
Aerodynamic matematical modeling - basic concepts
p0590 N81-31106
Impact of high-alpha aerodynamics on dynamic
stability parameters of aircraft and missiles
p0590 N81-31107
Aeroelasticity, including dynamic effects of
separated flow --- launch vehicle response
p0592 N81-31118
Control derivatives
p0592 N81-31119
Structural response methods and evaluation results
for helicopter landing decks on 210- and
270-foot USCCG cutters

Reliability advancement for electronic engine controllers, volume 1
[AD-A098623] p0444 N81-25087
Electro-magnetic compatibility: The determination of safety for critical systems
p0545 N81-29079

ELECTRONIC EQUIPMENT TESTS
New storage medium - Greater safety. II - Testing, fabrication, implementation --- MNOS block oriented random access memory (BORAM) circuits
p0227 A81-24044
The new look in reliability - It works --- Operational Mission Environment test program for F/A-18 aircraft
p0229 A81-24268
Augmenting ATE with dynamic simulation testing techniques
p0320 A81-30241
Full authority digital electronic control application to a variable cycle engine
[SAE PAPER 801203] p0403 A81-34212
The Hornet's operational mission environment
p0571 A81-46491
A comparison between electric field strengths similarly generated and measured in the open air, in a shielded enclosure and in a large aircraft hangar, over frequency range 10 to 110 MHz
[RSRE-MEMO-3248] p0084 N81-12353
Testing aircraft instruments
[AD-A095680] p0334 N81-20075
Software survey for the avionics test bed --- for large space structures
[NASA-CR-161089] p0629 N81-32143

ELECTRONIC PACKAGING
DC-to-DC power supply for light aircraft flight testing
[NASA-CR-163850] p0141 N81-14989
The packaging of electronic engine control units and related subcomponents
p0497 N81-27105

ELECTRONIC PHOTOGRAPHY
U ELECTRO-OPTICAL PHOTOGRAPHY

ELECTRONIC RECORDING SYSTEMS
Requirements, technology and configuration evaluation for Crash Survivable Flight Data Recording (CSFDR) system
[AD-A098584] p0442 N81-25072

ELECTRONIC SWITCHES
U SWITCHING CIRCUITS

ELECTRONIC TRANSDUCERS
A study of the performance of an Olson type active noise controller and the possibility of the reduction of cabin noise
[UTIAS-TN-228] p0552 N81-29924

ELECTRONICS
Aircraft electricity and electronics /3rd edition/ --- Book
p0624 A81-49877

ELECTROPHYSICS
NT ELECTRO-OPTICS

ELECTROPLATING
Prevention of spline wear by soft metallic coatings --- aircraft engines
[AD-A091861] p0132 N81-14064

ELECTROREFINING
Silver recovery from aircraft scrap
[PB81-150021] p0392 N81-23269

ELECTROSTATIC CHARGE
Ground testing of aircraft antistatic protection
[ONERA, TP NO. 1980-126] p0015 A81-11674
Dielectric electrostatic charge reduction
[SAE PAPER 810571] p0519 A81-42736
Flight tests for studying radioelectric perturbations of an electrostatic origin
p0200 N81-16160
Static charge in aircraft fuel tanks
[AD-A093552] p0208 N81-17045

ELECTROSTATIC FIELDS
U ELECTRIC FIELDS

ELECTROSTATIC PLASMA
U PLASMAS (PHYSICS)

ELEVATION ANGLE
Maximum likelihood elevation angle estimates of radar targets using subapertures
p0359 A81-32691
Helicopter noise contour development techniques and directivity analysis
[AD-A093426] p0221 N81-17851
Investigation of impingement region and wall jets formed by the interaction of high aspect ratio lift jets and a ground plane
[NASA-CR-152174] p0261 N81-19017

ELEVATORS (CONTROL SURFACES)
Quasi-hybrid airships
[AIAA 81-1333] p0456 A81-38538
Graphite thermoplastic YC-14 outboard elevator
p0530 A81-43631
Transonic wind tunnel measurements of tailplane and elevator effectiveness of the Jindivik 203B target aircraft
[AD-A098180] p0424 N81-24031

ELEVONS
An analysis of gap effects on wing-elevon aerodynamic characteristics
[AIAA PAPER 81-0364] p0166 A81-20783

ELLIPTICITY
A theoretical treatment of lifting surface theory of an elliptic wing
p0347 A81-30653
An implicit finite volume method for elliptical flow computation --- numerical integration, aerothermodynamics
p0255 N81-18248

EMERGENCIES
Developing an emergency medical disaster plan for an airport
p0053 A81-13513
Airborne emergency hospital
p0299 A81-29207
A study of factors affecting aircrew survivability following emergency escape over water
p0409 A81-34697
A review of in-flight emergencies in the ASRS data base
[NASA-CR-166166] p0372 N81-22031
Information transfer during contingency operations: Emergency air-ground communications
p0595 N81-31168
Emergency cabin lighting installations: An analysis of ceiling- versus lower cabin-mounted lighting during evacuation trials --- visibility
[AD-A103191] p0636 N81-33175

EMERGENCY LIFE SUSTAINING SYSTEMS
Mobilization of trauma teams for aircraft disasters
p0053 A81-13514
Passenger survival in wide-bodied jet aircraft accidents vs. other aircraft - A comparison
p0054 A81-13515
Survival and Flight Equipment Association, Annual Symposium, 17th, Las Vegas, Nev., December 2-6, 1979, Proceedings
p0174 A81-22076
Ejection experience in F/FB-111 aircraft - 1967-1978
p0176 A81-22098
Human factors aspects of emergency egress from a business jet

Energy-saving ramp lighting with high-pressure sodium lamps
p0056 A81-14243
Fuel saving methods in civil aviation. II
p0059 A81-14755
Airline flight departure procedures - Choosing between noise abatement, minimum fuel consumption and minimum cost
p0101 A81-17044
Fuel conservation in the air transportation industry - General and operational aspects
p0102 A81-17143
Operational energy conservation strategies in commercial aviation
p0155 A81-20465
Airliner maintenance for fuel efficiency
[AIAA PAPER 81-0787] p0367 A81-33077
Energy modeling for aviation fuel efficiency
[AIAA PAPER 81-0789] p0368 A81-33083
Fuel conservation integrated into airline economics
[AIAA PAPER 81-0831] p0368 A81-33084
A status report on the Energy Efficient Engine Project
[SAE PAPER 801119] p0396 A81-34155
Overview of aviation energy programs and supply problems
[SAE PAPER 801230] p0405 A81-34232
Wright Field turboprop study
[AIAA PAPER 81-1685] p0526 A81-43157
Digital simulation for energy conservation in a large wind tunnel plant system
p0613 A81-48003
Compilation of energy efficient concepts in advanced aircraft design and operations. Volume 2: Abstract data base
[AD-A094226] p0252 N81-18050
Ceramic applications in turbine engines --- for improved component performance and reduced fuel usage
[NASA-CR-159865] p0274 N81-19118
Integrated Application of Active Controls (IAAC) technology to an advanced subsonic transport: Project plan
[NASA-CR-3305] p0332 N81-20062
Energy efficient engine flight propulsion system: Aircraft/engine integration evaluation
[NASA-CR-159584] p0375 N81-22051
Aircraft Energy Efficiency program: Laminar flow control technology
[NASA-TM-82352] p0437 N81-24389
Aircraft energy efficiency. Overview
[NASA-FACTS-96/9-80] p0538 N81-28083
Minimum fuel horizontal flightpaths in the terminal area
[NASA-TM-81313] p0549 N81-29133
Analysis of the performance of the drive system and diffuser of the Langley unitary plan wind tunnel
[NASA-TM-83168] p0635 N81-33158
Responses to comments of Air Transport Association of America on aircraft towing feasibility study
[DE81-029834] p0638 N81-33201
ENERGY CONSUMPTION
Characteristics and status of the US National Transonic Facility
p0038 N81-11065
Theoretical study of network design methodologies for the aerial relay system --- energy consumption and air traffic control
[NASA-CR-159365] p0249 N81-18033
ENERGY CONVERSION
NT SOLAR ENERGY CONVERSION
ENERGY CONVERSION EFFICIENCY
New BBC high-efficiency gas turbines
p0017 A81-11797
Improving the mechanical load matching of wind energy converters
p0055 A81-13870
Wing flapping with minimum energy
p0283 A81-27089
The possibilities of improving the efficiency of gas turbines
p0288 A81-28614
Component research for future propulsion systems
p0454 A81-38058
ENERGY DISSIPATION
Loss model for off-design performance analysis of radial turbines with pivoting-vane, variable-area stators
[SAE PAPER 801135] p0397 A81-34166
Investigation of the influence of the radial nonuniformity of initial temperature and energy losses on flow structure in a highly loaded turbine stage
p0465 A81-40019
Core compressor exit stage study. Volume 2: Data and performance report for the baseline configuration
[NASA-CR-159498] p0195 N81-16051
ENERGY DISTRIBUTION
Characteristics of thermal energy separation in a gas ejector
p0281 A81-27371
ENERGY LOSSES
U ENERGY DISSIPATION
ENERGY METHODS
NT STRAIN ENERGY METHODS
ENERGY POLICY
Definitive generic study for the effect of high lift airfoils on wind turbine effectiveness, executive summary
[SERI/TR-98003-2] p0043 N81-11492
Alternative energy sources for non-highway transportation, appendices
[DOE/CS-05438/T1-VOL-3] p0044 N81-11500
Optimized pitch controller for load alleviation on wind turbines
[FFA-TN-HU-2189-PT-1] p0087 N81-12634
ENERGY REQUIREMENTS
Compilation of energy efficient concepts in advanced aircraft design and operations. Volume 1: Technical report
[AD-A094225] p0252 N81-18051
Analysis of the performance of the drive system and diffuser of the Langley unitary plan wind tunnel
[NASA-TM-83168] p0635 N81-33158
ENERGY SOURCES
Wingtip vortex turbine
[NASA-CASE-LAR-12544-1] p0496 N81-27096

ENERGY TECHNOLOGY
Hydrogen - Its technology and implications. Volume 4 - Utilization of hydrogen --- Book
p0016 A81-11751
ENGINE ANALYZERS
Effect of time-dependent flight loads on turbofan

engine performance deterioration
[ASME PAPER 81-GT-203] p0318 A81-30093
Who needs engine monitoring?
p0599 N81-31209

ENGINE CONTROL
NT TURBOJET ENGINE CONTROL
The all-electric aircraft
p0008 A81-11617
Computerized flight management for fuel saving
p0018 A81-12349
Digital control for helicopter powerplants
p0104 A81-17504
The digital control system as part of an integrated accessory fit for future engines
p0104 A81-17505
Failure Indication and Corrective Action for turboshaft engines
p0106 A81-17515
Turbo-compressors surge and surge control
[AIAA PAPER 81-0070] p0159 A81-20579
Trajectory generation techniques for multivariable control of aircraft turbine engines
p0240 A81-26609
Using microprocessors in fault monitoring of aircraft electronics
[ASME PAPER 81-GT-138] p0316 A81-30040
Full-authority digital electronic controls for civil aircraft engines
[ASME PAPER 81-GT-138] p0316 A81-30041
Digital control makes a commercial debut on the JT9D engine
[ASME PAPER 81-GT-199] p0317 A81-30090
Future challenges in V/STOL flight propulsion control integration
[SAE PAPER 801140] p0397 A81-34170
An application of redundancy in digital electronic engine control
[SAE PAPER 801200] p0402 A81-34210
Flight test reliability demonstration of electronic engine controls
[SAE PAPER 801201] p0403 A81-34211
Full authority digital electronic control application to a variable cycle engine
[SAE PAPER 801203] p0403 A81-34212
Current and future use of an AIDS integrated EMS --- Aircraft Integrated Data System for Engine Monitoring
[SAE PAPER 801219] p0404 A81-34225
NDEC - A control concept for helicopter gas turbines --- speed (N) based Digital Electronic Control
[AHS 80-44] p0477 A81-40171
Reliability assurance of electronic engine controls
[AIAA PAPER 81-1499] p0506 A81-40911
Flight test of a full authority Digital Electronic Engine Control system in an F-15 aircraft
[AIAA PAPER 81-1501] p0507 A81-40912
Combined environment reliability testing /CERT/ as applied to engine mounted electronic controls
[AIAA PAPER 81-1500] p0516 A81-42204
Real-time estimation in advanced turbofan engines
p0564 A81-45553
Design of fault tolerant electronic engine controls
[AIAA PAPER 81-1496] p0566 A81-45894
Future challenges in helicopter flight/propulsion control integration
p0575 A81-46633
Turbomachinery noise studies of the AiResearch QCGAT engine with inflow control --- acoustic performance
[AIAA PAPER 81-2049] p0619 A81-48621
Model following control of gas turbine engines
p0624 A81-49900
Propulsion Controls, 1979 --- air breathing engine control
[NASA-CP-2137] p0078 N81-12090
Multivariable identification using centralized fixed modes
p0079 N81-12091
Performance seeking controls
p0079 N81-12092
F100 multivariable control synthesis program: A review of full scale engine altitude tests --- F100 engine
p0079 N81-12093
Design of a multivariable integrated control for a supersonic propulsion system --- variable stream control engine
p0079 N81-12094
Propulsion controls
p0079 N81-12095
Should we attempt global (inlet engine airframe) control design?
p0079 N81-12097
Road map to adaptive optimal control --- jet engine control
p0079 N81-12098
Propulsion control and control theory: A new research focus
p0080 N81-12099
Multivariable synthesis with transfer functions --- applications to gas turbine engines
p0080 N81-12102
Alternatives for jet engine control
p0080 N81-12103
Power control for hot gas engines
[NASA-CASE-NPO-14220-1] p0133 N81-14318
Apparatus for sensor failure detection and correction in a gas turbine engine control system
[NASA-CASE-LEW-12907-2] p0273 N81-19115
Reliability advancement for electronic engine controllers, volume 1
[AD-A098623] p0444 N81-25087
Microcomputer Applications in Power and Propulsion Systems
[AGARD-LS-113] p0497 N81-27103
Microprocessor characteristics and comparative features
p0497 N81-27104
The packaging of electronic engine control units and related subcomponents
p0497 N81-27105
Microprocessor system test and monitoring
p0497 N81-27108
Fault trees and system reliability analysis with reference to the control of aircraft engines
p0498 N81-27109
Full authority digital electronic control turbofan engine demonstration
p0498 N81-27112

ENGINE COOLANTS
Heat transfer from a row of impinging jets to concave cylindrical surfaces
p0231 A81-24924
Investigation of the cooling of the turbine rotor blade of a gas-turbine power system
p0465 A81-40020
TF41/Lamilloy Accelerated Mission Test
[AIAA PAPER 81-1349] p0501 A81-40833

ENGINE DESIGN
NT ROCKET ENGINE DESIGN
A numerical study of candidate transverse fuel injector configurations in the Langley scramjet engine
p0003 A81-10709
Engine air intake design support by use of computational methods and comparison of theoretically derived pressure distributions with experimental data
p0008 A81-11614
Hydrogen-fueled aircraft
p0016 A81-11753
Optimum design of axial flow gas turbine stage. I - Formulation and analysis of optimization problem. II - Solution of the optimization problem and numerical results
p0019 A81-12608
Variable geometry, lean, premixed, prevaporized fuel combustor conceptual design study
[ASME PAPER 80-GT-16] p0019 A81-12609
Automation of aircraft gas-turbine power plants --- Russian book
p0020 A81-12782
The development of low-toxic combustion chambers of transport gas turbine engines
p0060 A81-14787
The jet engine - Anniversary of a missed opportunity
p0061 A81-15168
Business aircraft turbofan technology progress in the 1970's, challenges in the 1980's
[SAE PAPER 800601] p0061 A81-15326
A new high bypass fan for general aviation
[SAE PAPER 800602] p0061 A81-15327
Lear fan propulsion system
[SAE PAPER 800609] p0062 A81-15332
Research on a high work axial gas generator turbine
[SAE PAPER 800618] p0062 A81-15338

A survey on airbreathing propulsion education
p0063 A81-15375
Fuel economy and extension of the service life of aircraft gas turbine engines
p0065 A81-15719
Charting a course for V/STOL
p0068 A81-16179
The origins of the turbojet revolution --- Book
p0068 A81-16248
Rolls-Royce engines status report
p0102 A81-17166
Turbopropeller engine PZL-105
p0103 A81-17324
Specialists' Meeting on Helicopter Propulsion Systems, Williamsburg, Va., November 6-8, 1979, Technical Papers
p0104 A81-17501
The impact of contingency ratings on advanced turboshaft engine design
p0104 A81-17502
The T700 booster engine
p0105 A81-17506
Drive system development for the 1980's --- helicopter transmissions
p0105 A81-17508
Development of helicopter transmission components for the 1980s
p0105 A81-17509
Helicopter propulsion system development and qualification
p0105 A81-17511
Is the engine helicopter-worthy
p0106 A81-17518
The measurement and analysis of station parameters of a turbojet engine
p0109 A81-17825
Calculation of propeller efficiency for an ideal propeller
p0121 A81-19444
Designing the Hornet for improved R and M
[AIAA PAPER 81-0230] p0162 A81-20688
Prediction method for the overall performance of turbofan engines
[AIAA PAPER 81-0367] p0166 A81-20786
Developments at VFW/Rhein-Flugzeugbau GmbH, Moenchengladbach --- trainer aircraft design
p0171 A81-21574
Design, durability and low cost processing technology for composite fan exit guide vanes
p0182 A81-22664
Requirements and possibilities - Rotorcraft powerplants /The 15th Halford Memorial Lecture/
p0226 A81-23999
Features improved cooling - Turbine blade redesign boosts life
p0227 A81-24046
Problems and promises in gas turbine combustor design development
p0236 A81-26007
The possibilities of improving the efficiency of gas turbines
p0288 A81-28614
The future of aeronautical propulsion
p0290 A81-29052
A new breed of an air breathing engine
p0292 A81-29070
Discrete hole film cooling of turbine blades
p0293 A81-29073
Film cooling performance by injection through discrete holes
p0293 A81-29074
Cyclone combustors in low emission gas turbine applications
p0294 A81-29082
Transpiration air cooled turbine blade - A technology for future generation aircraft and industrial gas turbine engines using coal or coal derived fuels
p0297 A81-29115
Basic problem of the analytical design of aircraft gas turbine engines. II
p0299 A81-29305
Material shortages - Effect on the aircraft engine industry
[AIAA 81-0509] p0301 A81-29387
Gas turbine engineering: Applications, cycles and characteristics --- Book
p0309 A81-29680
Turbine blade construction of multistage axial-flow compressors
p0309 A81-29850
Development of a low NO/x/ lean premixed annular combustor
[ASME PAPER 81-GT-40] p0312 A81-29954
Inverse or design calculations for non-potential flow in turbomachinery blade passages
[ASME PAPER 81-GT-78] p0314 A81-29986
Sensitivity of turbine blade temperatures to tolerances of design variables
[ASME PAPER 81-GT-90] p0314 A81-29997
Low NO/x/ and fuel flexible gas turbine combustors
[ASME PAPER 81-GT-99] p0315 A81-30006
Establishing cruise-engine cycle payoffs for a supersonic VSTOL aircraft
[ASME PAPER 81-GT-100] p0315 A81-30007
Life cycle cost before, during and after the design of aircraft propulsion systems
[ASME PAPER 81-GT-111] p0315 A81-30016
Design and development of the combustor inlet diffuser for the NASA/GE energy efficient engine
[ASME PAPER 81-GT-129] p0316 A81-30033
Design analysis of high-efficiency low-stress ceramic gas turbines
[ASME PAPER 81-GT-130] p0316 A81-30034
Engine cycle selection for advanced technology engine studies
[ASME PAPER 81-GT-191] p0317 A81-30084
Experimental investigation of a low hub-to-tip ratio single stage transonic fan
[ASME PAPER 81-GT-209] p0318 A81-30098
Test-stand combustion chamber for the study and development of forced working processes --- for jet engines
p0319 A81-30151
Numerical methods for studying the stress-strain state and service life of aircraft gas-turbine engine disks
p0351 A81-31258
Principles of aircraft-engine assembly --- Russian book
p0355 A81-31799
Rolls-Royce RB 211-535 power plant
[AIAA PAPER 81-0807] p0368 A81-33886
CFM56-3 high by-pass technology for single aisle twins
[AIAA PAPER 81-0808] p0368 A81-33889
Results of thermal tests on the GTA-18 gas turbine unit with the RD-ZM-500 jet engine
p0395 A81-34022
Improved components for engine fuel savings
[SAE PAPER 801116] p0395 A81-34152
JT8D performance improvement to offset rising fuel costs
[SAE PAPER 801117] p0395 A81-34153
A status report on the Energy Efficient Engine Project
[SAE PAPER 801119] p0396 A81-34155
Composite wall concept for high-temperature turbine shrouds - Heat transfer analysis
[SAE PAPER 801138] p0397 A81-34169
The GTCP331 Auxiliary Power Unit for the next generation commercial transports
[SAE PAPER 801147] p0398 A81-34176
Fuel efficiency improvements to the T56 turboprop engine
[SAE PAPER 801150] p0399 A81-34178
Commuter turboprop propulsion technology
[SAE PAPER 801243] p0406 A81-34239
The High Performance Auxiliary Power Unit technology demonstrator program
[SAE PAPER 801148] p0406 A81-34240
Developing a Fighter Engine Derivative of the B-1/F101 engine
[SAE PAPER 801156] p0407 A81-34246
Turbine engine design --- engineering for cost effectiveness and propulsive efficiency
[AIAA PAPER 81-0915] p0408 A81-34362
History of the Pegasus vectored thrust engine
p0411 A81-35630
Design, construction and testing of an improved aircraft propeller
p0449 A81-37635
New technologies for compressors of aviation engines
p0452 A81-37656
T700 engine integral inlet separator - All weather operational protection
p0469 A81-40108

Design of rotorcraft powerplants - Use of life cycle costing as an aid to design optimisation
p0469 A81-40109

Aerodynamic design of engine air intakes for improved performance
p0470 A81-40117

The development of a twin-turbofan V/STOL aircraft
[AHS 80-8] p0473 A81-40141

Development of small fuel efficient aircraft engines
[AHS 80-38] p0477 A81-40167

Regenerative engine for helicopter application
[AHS 80-39] p0477 A81-40168

A new approach to turboshaft engine growth
[AHS 80-41] p0477 A81-40169

Design and development of the Model 412 helicopter
[AHS 80-56] p0478 A81-40181

Battle of the 15 tonne fans
p0480 A81-40457

TF41/Lamilloy Accelerated Mission Test
[AIAA PAPER 81-1349] p0501 A81-40833

Exploratory development program to improve combustor dome operating characteristics
[AIAA PAPER 81-1351] p0501 A81-40834

Improved combustor durability - Segmented approach with advanced cooling techniques
[AIAA PAPER 81-1354] p0501 A81-40836

Composite fan exit guide vanes for high bypass ratio gas turbine engines
[AIAA PAPER 81-1357] p0501 A81-40839

Selected results from combustion research at the Lewis Research Center
[AIAA PAPER 81-1392] p0503 A81-40859

A strategy for developing the next generation fighter/attack aircraft engine
[AIAA PAPER 81-1478] p0505 A81-40898

Advanced supersonic transport propulsion and configuration technology improvements
[AIAA PAPER 81-1595] p0508 A81-40970

Selection of turbine parameters for steam-hydrogen engine schemes
p0509 A81-41028

Thermodynamic comparison of the efficiencies of semiclosed- and open-loop air cooling systems of gas turbine engines
p0509 A81-41029

Critical considerations in the design of supersonic combustion ramjet /scramjet/ engines
[AIAA PAPER 80-1284] p0511 A81-41748

High pressure fuel pumps - Their design and evolution /The 13th J. D. North Memorial Lecture/
p0513 A81-42052

The E3 combustors - Status and challenges
[AIAA PAPER 81-1353] p0514 A81-42176

Engine duty cycle estimation for conceptual design aircraft
[AIAA PAPER 81-1368] p0514 A81-42179

F-16 variable-geometry inlet design and performance
[AIAA PAPER 81-1394] p0514 A81-42184

Zero-length inlets for subsonic V/STOL aircraft
[AIAA PAPER 81-1396] p0515 A81-42186

Engine life methodologies for conceptual design
[AIAA PAPER 81-1398] p0515 A81-42188

The use of engine operating experience in the preliminary design of aircraft gas turbine combustion systems
[AIAA PAPER 81-1399] p0515 A81-42189

Modeling of ramjet combustors using simple reactor theory
[AIAA PAPER 81-1429] p0515 A81-42196

ATES activity and status at Detroit Diesel Allison --- Advanced Technology Engine Studies
[AIAA PAPER 81-1504] p0516 A81-42206

Low and high speed propellers for general aviation - Performance potential and recent wind tunnel test results
p0521 A81-42758

Avco Lycoming's ALF 502 high bypass fan engine
[SAE PAPER 810618] p0523 A81-42773

Small turbofan engines - Their impact on general aviation aircraft
[SAE PAPER 810622] p0523 A81-42776

An overview of general aviation propulsion research programs at NASA-Lewis Research Center
[SAE PAPER 810624] p0523 A81-42778

Aerodynamic design data for a cruise-matched high performance single-engine airplane
[SAE PAPER 810625] p0523 A81-42779

Hydrogen fueled catalytic combustion for low thrust expendable turbojet engine
[AIAA PAPER 81-1715] p0527 A81-43165

The PW100 commuter powerplant
[AIAA PAPER 81-1731] p0528 A81-43170

Turboprop engine propulsion for the 1990's
[AIAA PAPER 81-1648] p0533 A81-43935

Engine life and usage methodologies for conceptual design
[AIAA PAPER 81-1651] p0533 A81-43937

Investigation of influences on the definition of engine usage for future systems
[AIAA PAPER 81-1652] p0533 A81-43938

A synopsis of the Navy A-7 Aircraft Fuel Conservation program
[AIAA PAPER 81-1681] p0535 A81-43949

The new generation of turboshaft and turboprop engines
p0560 A81-44473

Progress toward a long-range propulsion plan
[AIAA PAPER 81-1503] p0566 A81-45891

The design and development of a mixer compound exhaust system for a quiet clean general aviation turbofan
[AIAA PAPER 81-1494] p0566 A81-45893

RB.199 - Compact Tornado power
p0567 A81-46334

Projected power and specific fuel consumption development of the Rolls Royce Gem engine
p0575 A81-46637

A technique for the implementation of nonlinear models as real-time digital simulations --- with application to aircraft turbine engine design
p0615 A81-48333

Assessment of inflow control structure effectiveness and design system development
[AIAA PAPER 81-2048] p0620 A81-48637

Propulsion energy for tomorrow's aviation
p0622 A81-45161

Hydrogen engines

Failure Indication and Corrective Action for
  turboshaft engines
  p0106 A81-17515
Critical field length calculations for preliminary
  design
  p0183 A81-23366
Contribution to the improvement of the classical
  method of maintenance of aeroengines
  p0290 A81-29055
Analysis of vibration related failures in aero
  turbo-shaft engines
  p0291 A81-29057
The analytical ferrograph - Some factors affecting
  deposit formation
  p0293 A81-29077
Full-flow debris monitoring in gas turbine engines
  [ASME PAPER 81-GT-60] p0313 A81-29970
Principles of the reliability of gas turbine engines
  --- Russian book
  p0482 A81-40621
An investigation of the recovery from an engine
  failure in a twin engine augmentor wing aircraft
  using the NAE Airborne Simulator
  p0509 A81-41199
Engine usage prediction for advanced fighter
  aircraft
  [AIAA PAPER 81-1367] p0514 A81-42178
Sensor/actuator failure detection and isolation
  for airbreathing propulsion systems
  p0564 A81-45551
Engine requirements for the T-37 trainer aircraft
  - A simulation study and analysis
  p0616 A81-48379
Sensor/actuator failure detection for turbofan
  engines
  p0080 N81-12104
Engine parameter trend analysis with LEADS 200:
  Possibilities and limitations --- using flight
  recorder data
  p0382 N81-23010
Investigations into local fault detection on
  turbojet engines --- monitoring instruments
  p0382 N81-23011
Location of faults in jet engines by calculation
  of component characteristics
  p0382 N81-23012
High-response measurements of a turbofan engine
  during nonrecoverable stall
  [NASA-TM-81759] p0443 N81-25084

ENGINE INLETS
Engine air intake design support by use of
  computational methods and comparison of
  theoretically derived pressure distributions
  with experimental data
  p0008 A81-11614
Optimum subsonic, high-angle-of-attack nacelles
  p0012 A81-11646
Exhaust gas reingestion measurements --- in
  helicopters
  p0106 A81-17521
A preliminary experimental investigation of the
  response of a turbojet engine to inlet pressure
  distortion
  p0108 A81-17824
Scale effects on turbulent boundary layer
  development and flow separation around V/STOL
  inlets at high incidence
  [AIAA PAPER 81-0014] p0157 A81-20538
Three-dimensional turbulent boundary layer
  development and separation in V/STOL engine
  inlets at incidence with small-cross flow and
  curvature influences
  [AIAA PAPER 81-0254] p0163 A81-20703
Development and validation of computational flow
  analysis for design of inlets and nozzles
  p0298 A81-29117
Design and development of the combustor inlet
  diffuser for the NASA/GE energy efficient engine
  [ASME PAPER 81-GT-129] p0316 A81-30033
Tests for inlet distortion in a two-spool turbojet
  engine on the ground test bed
  p0419 A81-37340
Aerodynamic design of engine air intakes for
  improved performance
  p0470 A81-40117
Effect of a part-span variable inlet guide vane on
  the performance of a high-bypass turbofan engine
  [AIAA PAPER 81-1362] p0502 A81-40842
F/A-18A inlet/engine compatibility flight test
  results
  [AIAA PAPER 81-1393] p0503 A81-40860
An experimental study on air intake performance
  for a rocket/ramjet engine
  [AIAA PAPER 81-1488] p0506 A81-40906
A perspective on developing new inlet distortion
  measurement and predictive methods
  [AIAA PAPER 81-1589] p0507 A81-40964
Aerodynamic and acoustic behavior of a YF-12 inlet
  at static conditions
  [AIAA PAPER 81-1597] p0508 A81-40972

F-16 variable-geometry inlet design and performance
[AIAA PAPER 81-1394] p0514 A81-42184

An approach to conformal inlet diffuser design for integrated propulsion systems
[AIAA PAPER 81-1395] p0514 A81-42185

Zero-length inlets for subsonic V/STOL aircraft
[AIAA PAPER 81-1396] p0515 A81-42186

Design concepts for minimizing hot-gas ingestion in V/STOL aircraft
[AIAA PAPER 81-1624] p0525 A81-43133

Propulsion system installation design for high-speed prop-fans
[AIAA PAPER 81-1649] p0526 A81-43144

Low-speed aerodynamic performance of 50.8-centimeter-diameter noise-suppressing inlets for the Quiet, Clean, Short-haul Experimental Engine (QCSEE) --- Lewis 9- by 15-foot low speed wind tunnel tests
[NASA-TP-1178] p0035 N81-11037

Prediction of sound radiated from different practical jet engine inlets
[NASA-CR-163824] p0137 N81-14789

High-speed cowlings, air inlets and outlets, and internal-flow systems
p0185 N81-15973

Effects on inlet technology on cruise speed selection
p0245 N81-17998

Forward velocity effects on fan noise and the suppression characteristics of advanced inlets as measured in the NASA Ames 40 by 80 foot wind tunnel: Acoustic data report
[NASA-CR-152329] p0258 N81-18798

Preliminary wind-tunnel investigation of the effects of engine nacelles on a transport configuration with high lift drag ratios to a Mach number of 1.00
[NASA-TM-82312] p0272 N81-19099

Electromagnetic scattering by open circular waveguides --- modeling jet engine inlets
[AD-A095554] p0336 N81-20345

Aerodynamic and acoustic behavior of a YF-12 inlet at static conditions
[NASA-CR-163106] p0342 N81-21079

Top-mounted inlet system feasibility for transonic-supersonic fighter aircraft --- V/STOL aircraft
[NASA-TM-81292] p0428 N81-24066

Inlet-engine compatability testing techniques in ground test facilities
p0431 N81-24090

Additional testing of the inlets designed for a tandem fan V/STOL nacelle
[NASA-CR-165310] p0483 N81-26075

Prediction of sound radiation from different practical jet engine inlets
[NASA-CR-164620] p0500 N81-27886

An investigation of engine influence on inlet performance --- conducted in the Ames 40- by 80-foot wind tunnel
[NASA-CR-166136] p0579 N81-30084

Fiber optics for aircraft engine/inlet control
[NASA-TM-82654] p0597 N81-31190

ENGINE MONITORING INSTRUMENTS

Failure Indication and Corrective Action for turboshaft engines
p0106 A81-17515

Engine performance monitoring systems expansion on Alitalia aircraft
p0290 A81-29054

The analytical ferrograph - Some factors affecting deposit formation
p0293 A81-29077

A digital technique for the analysis of the response of compressor/duct systems in unsteady flow
p0294 A81-29078

Full-flow debris monitoring in gas turbine engines
[ASME PAPER 81-GT-60] p0313 A81-29970

Overview of ARP 1587 aircraft gas turbine Engine Monitoring System guide
[SAE PAPER 801218] p0404 A81-34224

Current and future use of an AIDS integrated EMS --- Aircraft Integrated Data System for Engine Monitoring
[SAE PAPER 801219] p0404 A81-34225

TF41/A7-E engine monitoring system implementation experience
[SAE PAPER 801222] p0404 A81-34226

TriStar engine monitoring in British Airways
[SAE PAPER 801224] p0405 A81-34227

An alternative approach to engine rating structures using monitoring systems
[SAE PAPER 801225] p0405 A81-34228

Advanced debris monitoring systems for helicopters

An overview of SAE ARP 1587: Aircraft gas turbine engine monitoring system guide
p0600 N81-31217

ENGINE NOISE

Acoustic structures --- titanium brazing method for producing honeycomb structures for jet engine noise reduction
p0001 A81-10272

Numerical prediction of bypass engine jet noise
[AIAA PAPER 80-1006] p0057 A81-14300

Propagation of three-dimensional acoustic perturbations in channels of variable cross-sectional area at frequencies close to cutoff frequency
p0119 A81-19338

Unsteady fan blade pressure and acoustic radiation from a JT15D-1 turbofan engine at simulated forward speed
[AIAA PAPER 81-0096] p0161 A81-20598
Convective amplification of gas turbine engine internal noise sources
p0171 A81-21595
New interpretations of shock-associated noise with and without screech
p0178 A81-22527
Core noise measurements from a small, general aviation turbofan engine
p0178 A81-22531
Noise from gas turbine combustors
p0236 A81-26008
Noise attenuation and associated thrust increase of turbojet engines through hyper-mixing ejector shrouds
p0291 A81-29062
Installation effects on propeller noise
[AIAA PAPER 80-0993] p0352 A81-31369
Analysis of axial fan noise with the help of the Lowson formalism
[AAAF PAPER NT 80-54] p0370 A81-33948
Broadband helicopter rotor noise
[AAAF PAPER NT 80-58] p0370 A81-33949
In-flight jet engine noise measurement system
p0410 A81-35553
Comparison of predicted engine core noise with proposed FAA helicopter noise certification requirements
p0454 A81-38062
Suppression of jet noise peak by velocity profile reshaping
p0458 A81-39039
Trailing edge noise from hovering rotors
[AHS 80-60] p0479 A81-40184
Aerodynamic and acoustic behavior of a YF-12 inlet at static conditions
[AIAA PAPER 81-1597] p0508 A81-40972
Effect of engine noise on aircraft wing laminar boundary-layer stability
p0510 A81-41255
The design and development of a mixer compound exhaust system for a quiet clean general aviation turbofan
[AIAA PAPER 81-1494] p0566 A81-45893
Aircraft noise control in the 1980's
p0567 A81-46352
Procedure for evaluation of engine isolators for reduced structure-borne interior noise transmission
[AIAA PAPER 81-1970] p0618 A81-48608
Laboratory study of efficient add-on treatments for interior noise control in light aircraft
[AIAA PAPER 81-1969] p0619 A81-48618
Engine noise source breakdown - Theory, simulation and results
[AIAA PAPER 81-2040] p0619 A81-48620
Turbomachinery noise studies of the AiResearch QCGAT engine with inflow control --- acoustic performance
[AIAA PAPER 81-2049] p0619 A81-48621
The effect of vane-frame design on rotor-stator interaction noise
[AIAA PAPER 81-2034] p0619 A81-48627
Effects of blade-vane ratio and rotor-stator spacing on fan noise with forward velocity
[AIAA PAPER 81-2032] p0620 A81-48628
Comparative acoustic wind-tunnel measurements and theoretical correlations on subsonic aircraft propellers at full-scale and model-scale
[AIAA PAPER 81-2004] p0620 A81-48634
Comparison of predicted engine core noise with current and proposed aircraft noise certification requirements
[AIAA PAPER 81-2053] p0620 A81-48635
Some modal-frequency spectra of fan noise
[AIAA PAPER 81-1990] p0620 A81-48636
Mixer nozzle aeroacoustic characteristics for the energy efficient engine
[AIAA PAPER 81-1994] p0621 A81-48639
Effect of excitation on coaxial jet noise as observed by an elliptic mirror
[AIAA PAPER 81-2044] p0621 A81-48651
High bypass ratio engine noise component separation by coherence technique
[AIAA PAPER 81-2054] p0621 A81-48653
The effect of flight and the presence of an airframe on engine exhaust noise
[AIAA PAPER 81-2029] p0623 A81-49727
Core noise measurements from a small, general aviation turbofan engine
[NASA-TM-81610] p0044 N81-11769
Analysis of pressure spectra measurements in a ducted combustion system
[NASA-TM-81583] p0146 N81-15768
Improved methods for fan sound field determination
[NASA-CR-165188] p0147 N81-15769
Studies on proper simulation during static testing of forward speed effects on fan noise
[NASA-CR-165626] p0202 N81-16853
Acoustic and aerodynamic performance investigation of inverted velocity profile coannular plug nozzles --- variable cycle engines
[NASA-CR-3149] p0203 N81-16854
VCE early acoustic test results of General Electric's high-radius ratio coannular plug nozzle
p0245 N81-17999
Flight and tunnel test results of the MDC mechanical jet noise suppressor nozzle
p0245 N81-18000
Forward velocity effects on fan noise and the suppression characteristics of advanced inlets as measured in the NASA Ames 40 by 80 foot wind tunnel: Acoustic data report
[NASA-CR-152329] p0258 N81-18798
Design of an exhaust mixer nozzle for the Avco-Lycoming Quiet Clean General Aviation Turbofan (QCGAT)
[NASA-CR-159426] p0274 N81-19120
Coupling of unsteady lift to acoustic duct modes in an axial flow fan
[AD-A095080] p0274 N81-19124
Comparison of predicted engine core noise with proposed FAA helicopter noise certification requirements
[NASA-TM-81739] p0381 N81-22839
Lateral attenuation of high-by-pass ratio engined aircraft noise
[NASA-TM-81968] p0394 N81-23862
Prediction of sound radiation from different practical jet engine inlets
[NASA-CR-164620] p0500 N81-27886
Helicopter noise exposure level data: Variations with test target. Indicated airspeed, distance, main rotor RPM and takeoff power
[AD-A100691] p0552 N81-29661
Noise suppression characteristics of peripherally segmented duct liners
[NASA-TP-1904] p0641 N81-33946

ENGINE PARTS
Is the engine helicopter-worthy
p0106 A81-17510
Turbine blade technology - Present and future
[ASME PAPER 80-C2/AERO-10] p0116 A81-18639
Computer-aided process planning system for aircraft engine rotating parts
p0149 A81-19836
Application of exoelectron emission for quality control of gas-turbine engine parts
p0171 A81-21367
Development program for a graphite/PMR 15 polyimide duct for the F404 engine
p0181 A81-22647
The M.45SD-02 variable pitch geared fan engine demonstrator test and evaluation experience
p0283 A81-27897
Some experience with ferrography in monitoring the condition of aircraft engines
p0285 A81-27943
High temperature metal matrix composites for gas turbines
p0295 A81-29090
Investigation of the squeeze film bearing on two-spool turbo-fan engine
p0295 A81-29093
Carbon/carbon components for advanced gas turbine engines
[ASME PAPER 81-GT-35] p0312 A81-29949
Cooling air flow characteristics in gas turbine components
[ASME PAPER 81-GT-76] p0313 A81-29984
Commercial engine logistics cost projections - A dynamic and flexible approach
[ASME PAPER 81-GT-114] p0315 A81-30018

Principles of aircraft-engine assembly --- Russian book
p0355 A81-31799
JT8D performance improvement to offset rising fuel costs
[SAE PAPER 801117] p0395 A81-34153
The present and future applications of titanium alloys in engines
p0417 A81-36666
Pilot installations for deposition techniques in the case of components exposed to heat and for diffusion joining of power plant components
p0449 A81-37634
Manufacturing technology for low temperature composite engine frames --- for TF-34 engine
[AIAA PAPER 81-1355] p0501 A81-40837
Recent developments in Naval aircraft jet engine usage
[AIAA PAPER 81-1366] p0502 A81-40846
Use of segmented mold process to produce large superalloy engine castings
[AIAA PAPER 81-1404] p0503 A81-40861
Blade tip ceramic outer air seal for long life turbine engines
[AIAA PAPER 81-1440] p0504 A81-40874
Critical considerations in the design of supersonic combustion ramjet /scramjet/ engines
[AIAA PAPER 80-1284] p0511 A81-41748
Engine life methodologies for conceptual design
[AIAA PAPER 81-1398] p0515 A81-42188
Impact of advanced propeller technology on aircraft/mission characteristics of several general aviation aircraft
[SAE PAPER 810584] p0520 A81-42745
Fiber-reinforced composites - The future for aeropropulsion
[AIAA PAPER 81-1713] p0527 A81-43164
Graphite/polyimide augmentor and nozzle components --- of advanced military gas turbine engines
[AIAA PAPER 81-1358] p0625 A81-49976
Metallurgical aspects of materials processing and manufacturing for aero-engine components --- gas turbine engines
[PNR-90019] p0084 N81-12209
A resin injection technique for the fabrication of aero engine composite components
[PNR-90024] p0131 N81-14004
Cost/benefit analysis of advanced materials technologies for future aircraft turbine engines
[NASA-CR-165225] p0144 N81-15006
Vibrations of turbine engine blades by shell analysis
p0257 N81-18404
Regenerative engine analysis program
[AD-A095144] p0274 N81-19123
Development and fabrication of refractory silicon carbide bodies, especially for gas turbine engines --- by hot pressing
[BMFT-FB-T-79-137] p0275 N81-19128
Development of gas turbine components, using silicon nitride --- forming techniques
[BMFT-FB-T-79-152] p0275 N81-19129
Concept definition: Retirement for cause of F-100 rotor components
[AD-A095584] p0335 N81-20080
The rejuvenation of properties in turbine engine hot section components by hot isostatic pressing
[AD-A097551] p0390 N81-23088
Performance retention of the RB211 powerplant in service
p0598 N81-31201
Performance deterioration: An airline perspective
p0598 N81-31202
A prescriptive model for resource allocation at the intermediate level engine facility
[AD-A103785] p0632 N81-33135

ENGINE STARTERS
Investigation into the vibration of the starter gearbox of an aircraft turbine engine
p0291 A81-29059
A generalized mathematical model to estimate gas turbine starting characteristics
[ASME PAPER 81-GT-202] p0318 A81-30092
Hydrodynamic modelling of the starting process in liquid-propellant engines
p0351 A81-31287
An experimental evaluation of the performance deficit of an aircraft engine starter turbine
[SAE PAPER 801137] p0397 A81-34168
The status of the expendable gasifier program --- gas generator for aircraft engine
[SAE PAPER 801151] p0406 A81-34242
Samarium cobalt (SMCO) generator/engine integration study
[AD-A092904] p0214 N81-17087
Reasons for low aerodynamic performance of 13.5-centimeter-tip-diameter aircraft engine starter turbine
[NASA-TP-1810] p0334 N81-20076
High performance auxiliary power unit technology demonstrator
[AD-A098618] p0444 N81-25085

ENGINE TESTING LABORATORIES
A mobile emissions laboratory for on-line analysis of combustion products from gas turbine engines
p0361 A81-32872
O.N.E.R.A. ramjet test facilities
p0365 A81-33285
A forward look at gas turbine testing facilities
[SAE PAPER 801124] p0396 A81-34159
Digital controls in a large engine test facility
p0532 A81-43715
Quantitative thermography in aero-engine research and development
[PNR-90021] p0029 N81-10075
Free-jet testing of powerplants for aircraft and missiles
p0431 N81-24089
Inlet-engine compatability testing techniques in ground test facilities
p0431 N81-24090
Gas turbine engine transient testing
p0431 N81-24091
Experimental verification of turboblading aeromechanics
p0432 N81-24092
Bench testing of a vectored thrust engine
p0432 N81-24093
Full annular combustor test facility for high pressure/high temperature testing
p0432 N81-24097

ENGINE TESTS
NT COLD FLOW TESTS

Reliability and engineering-economic characteristics of aircraft engines --- Russian book
p0001 A81-10045
Forced vibrations of a nonlinear system excited by a centrifugal oscillator with a sloping engine characteristic
p0002 A81-10439
Advanced transmission component development and test program --- for helicopters
p0105 A81-17507
Safety considerations for helicopter drive systems of the 1980s
p0105 A81-17510
Development and operational flight test of the model 250-C28B gas turbine engine
p0105 A81-17512
Issues regarding Army turboshaft engines diagnostics and condition monitoring
p0105 A81-17514
Advanced technology turboshaft IR suppression
p0106 A81-17519
A preliminary experimental investigation of the response of a turbojet engine to inlet pressure distortion
p0108 A81-17824
The measurement and analysis of station parameters of a turbojet engine
p0109 A81-17825
Considerations of the use of vitiated preheat --- for engine inlets
p0150 A81-20023
Parameter identification and discriminant analysis for jet engine mechanical state diagnosis
p0156 A81-20474
The M.45SD-02 variable pitch geared fan engine demonstrator test and evaluation experience
p0283 A81-27897
Effectiveness of turbine engine diagnostic systems
p0290 A81-29053
Investigation of the squeeze film bearing on two-spool turbo-fan engine
p0295 A81-29093

Reduction of strut induced rotor blade vibration with the modified stator setting angles
p0295 A81-29097
The evaluation of fuel property effects on Air Force gas turbine engines - Program Genesis
[ASME PAPER 81-GT-1] p0310 A81-29926
The development of a substitute bird model
[ASME PAPER 81-GT-23] p0311 A81-29939
Pattern factor improvement in the F-100 primary combustion system
[ASME PAPER 81-GT-25] p0311 A81-29941
Preliminary study on reheat combustor for advanced gas turbine
[ASME PAPER 81-GT-29] p0311 A81-29944
Improved jet engine maintenance through automated vibration diagnostic systems
[ASME PAPER 81-GT-62] p0313 A81-29972
Application of water cooling for improved gas turbine fuel flexibility and availability
[ASME PAPER 81-GT-68] p0313 A81-29977
The Navy PATE program --- Propulsion Automatic Test Equipment
[ASME PAPER 81-GT-189] p0317 A81-30082
High temperature electronic requirements in aeropropulsion systems
p0359 A81-32547
Centralized in-place pressure calitration system for multiple turbine engine aerodynamic pressure measurement systems
p0360 A81-32847
Development of a noninterference compressor blade stress measurement system
p0361 A81-32874
CFM56-3 high by-pass technology for single aisle twins
[AIAA PAPER 81-0808] p0368 A81-33809
Propellers for economic flight at high speeds
[AAAF PAPER NT 80-34] p0369 A81-33936
Results of thermal tests on the GTA-18 gas turbine unit with the RD-ZM-500 jet engine
p0395 A81-34022
The F100 engine
[SAE PAPER 801110] p0395 A81-34151
A review of the installation, performance and economic aspects of a high altitude facility for small gas turbines
[SAE PAPER 801121] p0396 A81-34157
Description of the warm core turbine facility and the warm annular cascade facility recently installed at NASA Lewis Research Center
[SAE PAPER 801122] p0396 A81-34158
Full Authority Digital Electronic Control turbofan engine demonstration
[SAE PAPER 801199] p0402 A81-34209
Tests for inlet distortion in a two-spool turbojet engine on the ground test bed
p0419 A81-37340
Fundamental investigation on jet engine ignition of fuel sprays and its application
p0420 A81-37341
Control of particulate emissions from turbine engine test cells by cooling water injection
p0453 A81-37796
An apparatus for the simulation of an air intake at high angle of attack in a compressor test facility
[ONERA, TP NO. 1981-35] p0460 A81-39238
Tests of air inlets at Reynolds numbers comparable to flight in the ONERA F1 and S1MA wind tunnels
[ONERA, TP NO. 1981-36] p0460 A81-39239
Wind-tunnel tests of engine-equipped models - Comparison of two jet wash simulation methods
[ONERA, TP NO. 1981-42] p0460 A81-39245
Investigation of the influence of the radial nonuniformity of initial temperature and energy losses on flow structure in a highly loaded turbine stage
p0465 A81-40019
Experimental determination of the circumferential drift of edge wakes of guide vanes in a turbine stage
p0466 A81-40022
A new approach to turboshaft engine growth
[AHS 80-41] p0477 A81-40169
TF41/Lamilloy Accelerated Mission Test
[AIAA PAPER 81-1349] p0501 A81-40833
F/A-18A inlet/engine compatibility flight test results

An exact solution of the problem of the motion of
a gyroscope in a Cardan suspension
p0019 A81-12704
Exact solutions of the equations of motion of a
gyro horizon compass
p0290 A81-29001
Concerning the motion of a piloted aircraft
p0299 A81-29312
Approximations and short cuts based on generalized
functions
p0347 A81-30730
Orthogonal multiblade coordinates
p0453 A81-38021
Calculation of the impingement of cloud droplets
in a cylinder by the finite-element method
p0533 A81-43890
Generic multi-body formulation of heavy lift
airship equations of motion
p0563 A81-45539
Investigation of landing flare in the presence of
wind shear
[ESA-TT-631] p0077 N81-12080
Dynamics of a helicopter-slung load system
p0092 N81-13051
Supercritical flow past symmetrical airfoils
[AD-A093300] p0203 N81-16984
Active controls for flutter suppression and gust
alleviation in supersonic aircraft --- YF-17
flutter model
[NASA-CR-163934] p0216 N81-17097
Advanced supersonic transport fixed-base simulator
evaluations at landing approach
p0244 N81-17992
Measurements of aerodynamic damping in the MIT
transonic rotor
[NASA-CR-163988] p0274 N81-19122
The stick-fixed lateral dynamic stability of the
CSIR SARA II autogyro
[NIAST-80/52] p0434 N81-24107

EQUATIONS OF STATE
Control system design using graphical
decomposition techniques
p0410 A81-35567

EQUATORIAL ORBITS
Air traffic control and position location by
satellite constellation in equatorial orbit
p0173 A81-21912

EQUILIBRIUM EQUATIONS
A new method for torsion of shaft with variable
diameter using non-orthogonal curvilinear
coordinates and its application
[AIAA 81-0477] p0300 A81-29378
Application of the finite element method to rotary
wing aeroelasticity
p0251 N81-18043

EQUIPMENT SPECIFICATIONS
Development of specifications from measured
environments
p0067 A81-16119
Requirements and possibilities - Rotorcraft
powerplants /The 15th Halford Memorial Lecture/

NT A-300 AIRCRAFT
Airbus Industrie's heavenly twins - A310 and A300-600
p0018 A81-12348
The FFCC cockpit of the A310 is practically defined
p0063 A81-15623
Airbus Industrie - Past, present and future /26th Mitchell Memorial Lecture/
p0284 A81-27907
The maintenance of the Airbus from the user's point of view
p0287 A81-28470
Integrated cockpit information system with color display equipment
p0450 A81-37643
Components in hybrid- and fiber technology for commercial aircraft of the Airbus family /flap support, spoiler, and window frame/
p0450 A81-37644
Airbus - Rudder unit in carbon fiber technology
p0451 A81-37651
Development of the carbon fiber-reinforced side rudder for the Airbus
[DGLR PAPER 81-055] p0607 A81-47551
Active gust- and maneuver load control concepts, taking into account, as example, the Airbus A300. I - Design of a controller in the temporal domain for the alleviation of gust loads and the control of the effectiveness for stochastic gusts
[DGLR PAPER 81-065A] p0608 A81-47552
Active gust- and maneuver load reduction concepts, taking into account, as an example, the Airbus A300. II - Design of a controller for gust and maneuver load reduction in the frequency range
[DGLR PAPER 81-065B] p0608 A81-47553
Design and construction of a model which is dynamically similar to the A310 wing
[DGLR PAPER 81-035] p0608 A81-47556
The half-model technique in the wind tunnel and its employment in the development of the Airbus family
[DGLR PAPER 81-118] p0609 A81-47587
Application of reduced natural longitudinal stability in the Airbus program
[DGLR PAPER 81-062] p0610 A81-47609
In-flight handling qualities investigation of A310 Airbus DLC-configurations on landing approach, using the DFVLR-HFB 320 in-flight simulator (variable stability aircraft) --- instrument flight
[ESA-TT-630] p0276 N81-19135
Civil component program Wing Section. Transonic wing development --- for the european airbus
[BMFT-FB-W-80-021] p0426 N81-24052
The future cockpit of the next generation of civil aircraft --- Airbus A310 digital displays
[SNIAS-802-111-113] p0427 N81-24057
Protection against wing icing for Airbus A300 and A310
[NASA-TM-76504] p0494 N81-27079
EUTROPHICATION
Development of a helicopter water quality monitoring/sampling system

[PB81-168734] p0499 N81-27714

EVACUATING (TRANSPORTATION)
The medical use of the helicopter in the field of air rescue
p0409 A81-34870
Applications of pyrotechniques in aviation
[SNIAS-792-422-103] p0023 N81-10025
Effect of thermal radiation on the integrity pressurized aircraft evacuation slides and slide materials
[AD-A098179] p0424 N81-24039
Emergency cabin lighting installations: An analysis of ceiling- versus lower cabin-mounted lighting during evacuation trials --- visibility
[AD-A103191] p0636 N81-33175

EVALUATION
NT TRAINING EVALUATION
Evaluation of a computer-generated perspective tunnel display for flight path following
[NASA-TP-1736] p0129 N81-13958
Landing flying qualities evaluation criteria for augmented aircraft
[NASA-CR-163097] p0130 N81-13969
Hydrographic applications of the global positioning system
[AD-A093750] p0206 N81-17029
Evaluation of the visual acquisition range of en-route air traffic from cockpit observations
[DFVLR-MITT-80-14] p0332 N81-20058
An investigation of the combustion behavior of solid fuel ramjets
[AD-A098481] p0445 N81-25240
Turbine bypass engine: A new supersonic cruise propulsion concept
[NASA-TM-82608] p0489 N31-26145
Design and evaluation of an integrated Quiet, Clean General Aviation Turbofan (QCGAT) engine and aircraft propulsion system

Mixer nozzle aeroacoustic characteristics for the energy efficient engine
[AIAA PAPER 81-1994] p0621 A81-48639

Shear layer instability noise produced by various jet nozzle configurations
[PNR-90018] p0088 N81-12825

An evaluation of wind tunnel test techniques for aircraft nozzle afterbody testing at transonic Mach numbers
[AD-A091775] p0126 N81-13931

Evaluation of wind tunnel nozzle afterbody test techniques utilizing a modern twin engine fighter geometry at Mach numbers from 0.6 to 1.2 --- YF-17 aircraft
[AD-A091545] p0126 N81-13932

Effects of sidewall gecmetry on the installed performance of nonaxisymmetric convergent-divergent exhaust nozzles
[NASA-TP-1771] p0185 N81-15976

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 1: Design layouts
[NASA-CR-159819-VOL-1] p0214 N81-17081

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 2: Tabulated aeroynamic data book 1
[NASA-CR-159819-VOL-2-BK-1] p0214 N81-17082

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 2: Tabulated aerodynamic data book 2
[NASA-CR-159819-VOL-2-BK-2] p0214 N81-17083

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 2: Tabulated aerodynamic data book 3
[NASA-CR-159819-VOL-2-BK-3] p0214 N81-17084

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 3: Graphical data book 1
[NASA-CR-159819-VOL-3-BK-1] p0214 N81-17085

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 3: Graphical data book 2
[NASA-CR-159819-VOL-3-BK-2] p0214 N81-17086

Aerodynamic/acoustic performance of YJ101/double bypass VCE with coannular plug nozzle
[NASA-CR-159869] p0220 N81-17846

QCGAT mixer compound exhaust system design and static big model test report
[NASA-CR-135386] p0274 N81-19119

Design of an exhaust mixer nozzle for the Avco-Lycoming Quiet Clean General Aviation Turbofan (QCGAT)
[NASA-CR-159426] p0274 N81-19120

Axisymmetric & non-axisymmetric exhaust jet induced-effects on a V/STOL vehicle design. Part 1: Data presentation --- conducted in Ames 11-foot transonic tunnel
[NASA-CR-166146] p0441 N81-25064

Design of a V/STOL propulsion system for a large-scale fighter model
[NASA-CR-166162] p0442 N81-25074

Mixing effectiveness test of an exhaust gas mixer in a high bypass turbofan at altitude
[NASA-TM-82663] p0496 N81-27095

Propulsive lateral control nozzle
[NASA-CASE-LAR-12136-1] p0639 N81-33210

EXHAUST SYSTEMS

The design and development of a mixer compound exhaust system for a quiet clean general aviation turbofan
[AIAA PAPER 81-1494] p0566 A81-45893

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions --- Lewis 8 by 6-foot supersonic wind tunnel tests
[NASA-CR-159818] p0093 N81-13057

Preliminary airworthiness evaluation AH-1S (PROD) helicopter equipped with a substitute straight exhaust pipe
[AD-A092614] p0194 N81-16045

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 1: Design layouts
[NASA-CR-159819-VOL-1] p0214 N81-17081

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 2: Tabulated aeroynamic data book 1
[NASA-CR-159819-VOL-2-BK-1] p0214 N81-17082

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 2: Tabulated aerodynamic data book 2
[NASA-CR-159819-VOL-2-BK-2] p0214 N81-17083

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 2: Tabulated aerodynamic data book 3
[NASA-CR-159819-VOL-2-BK-3] p0214 N81-17084

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 3: Graphical data book 1
[NASA-CR-159819-VOL-3-BK-1] p0214 N81-17085

Model aerodynamic test results for two variable cycle engine coannular exhaust systems at simulated takeoff and cruise conditions. Comprehensive data report. Volume 3: Graphical data book 2
[NASA-CR-159819-VOL-3-BK-2] p0214 N81-17086

EXPERIMENTAL DESIGN
The art of designing experimental aircraft - An overview
[AIAA PAPER 81-0944] p0363 A81-32939
European transonic wind tunnel ETW - Status of the project at the end of the predesign phase
[DGLR PAPER 81-027] p0609 A81-47563
Shielded enclosure test bed requirement
[AD-A092589] p0198 N81-16073
A rotating, wind tunnel balance and associated experimental techniques
[AAAF-NT-80-13] p0218 N81-17108
Experimental verification of turboblading aeromechanics
p0432 N81-24092
Methodological approaches to identifying relevant features for visual flight
[AD-A100199] p0541 N81-28108
EXPERIMENTATION
Modeling, acquisition and processing during large displacements --- associated with experiments in flight mechanics
[AAAF-NT-80-16] p0210 N81-17056
EXPLORATION
NT OIL EXPLORATION
EXPLOSIONS
Special Aviation Fire and Explosion Reduction (SAFER) advisory committee, volume 1
[AD-A092016] p0191 N81-16024
Flame tube and ballistic evaluation of Explosafe aluminum foil for aircraft fuel tank explosion protection --- suppressing combustion overpressure
[AD-A093542] p0208 N81-17046
Evaluation of explosafe. Explosion suppression system for aircraft fuel tank protection
[AD-A093125] p0209 N81-17047
EXPLOSIVE FORMING
Increasing the strength properties of sheet parts by explosive forming of them with optimization of the production parameters
p0365 A81-33174
EXPLOSIVE GASES
U FLAMMABLE GASES
EXPLOSIVES
Active control of an explosive wing-store flutter case --- Langley Research Center
p0082 N81-12117
Tool force evaluation of lathe machined high explosives
[NHSMP-80-20] p0144 N81-15148
EXPONENTIAL FUNCTIONS
Efficiency of the methods and algorithms used for estimating the reliability in aviation techniques
p0365 A81-33173
EXPOSURE
Noise exposure of civil aircarrier airplanes through the year 2000. Volume 1: Methods, procedures, results
[EPA-550/9-79-313-1] p0087 N81-12644
Noise exposure of civil aircarrier airplanes through the year 2000. Volume 2: Appendices A through F
[EPA-550/9-70-313-2] p0087 N81-12645
The effect of the in-service environment on composite materials (resume of the April 1980 Athens conference)
p0199 N81-16146
Test and evaluation of foam-in-place fuel tank container
[AD-A095747] p0334 N81-20073
The 737 graphite composite flight spoiler flight service evaluation
[NASA-CR-159362] p0343 N81-21131
Environmental exposure effects on composite materials for commercial aircraft
[NASA-CR-165765] p0550 N81-29165
EXTERNAL STORE SEPARATION
Store separation trajectory analysis
p0050 A81-13216
Analytical methods for store separation flight test
p0177 A81-22344
Conditions for safe separation of external stores
p0529 A81-43395
Topside weapons release - An analytical study
[AIAA PAPER 81-1655] p0533 A81-43939
A new approach to weapon separation aerodynamics
[AIAA PAPER 81-1654] p0616 A81-48416
Evaluation of aircraft interference effects on external stores at subsonic and transonic speeds
p0187 N81-15997
A theoretical method for the simulation of separation behavior of aircraft external stores --- applications to computerized wind tunnel tests
[MBB-FE-122/S/PUB/16] p0203 N81-16987
Store separation simulation in subsonic wind tunnels
[MBB-FE-123/S/PUB/20] p0203 N81-16988
Prediction of supersonic store separation characteristics including fuselage and stores of noncircular cross section. Volume 2: Users manual for the computer program
[AD-A099391] p0494 N81-27080
Prediction of supersonic store separation characteristics including fuselage and stores of noncircular cross section. Volume 1: Theoretical methods and comparisons with experiment
[AD-A099330] p0495 N81-27081
Prediction of supersonic store separation characteristics including fuselage and stores of noncircular cross section. Volume 3: Appendices A and B. Details of program 1
[AD-A099331] p0495 N81-27082
Prediction of supersonic store separation characteristics including fuselage and stores of noncircular cross section. Volume 4: Appendices C and D. Details of program 2
[AD-A099332] p0495 N81-27083
EXTERNAL STORES
Active suppression of aircraft flutter
p0059 A81-14397
A method for calculating the aerodynamic forces and moments on external stores of aircraft
p0226 A81-24006
Aerodynamic modeling of an oscillating wing with external stores
[AIAA 81-0648] p0307 A81-29501
Helicopter External Gondola System
p0576 A81-46642
In-flight measurement of aerodynamic loads on captive stores. Equipment and results
[NLR-MP-79013-U] p0022 N81-10012
Report on a cooperative programme on Active Flutter Suppression
[AGARD-R-689] p0082 N81-12115
Wind tunnel tests on a fighter aircraft wing/store flutter suppression system: The B.Ae control law
p0083 N81-12119
Active flutter suppression on an F-4F aircraft with external stores using already existing control surfaces
[MBB-FE-17/S/PUB/24] p0131 N81-13972
Effects of nonlinearities on wing store flutter
[MBB-FE-17/S/PUB/27] p0131 N81-13974
Transonic wind tunnel tests on an oscillating wing with external store. Part 4: The wing with underwing: Store
[AD-A077370] p0139 N81-14969
An economic and versatile panel method for aircraft and aircraft/store configurations. An outline of the principal features of the mathematical modeling and numerical implementation of the British Aerospace (Warton) Mk II Panel Method
p0144 N81-15311
Prospects for exploiting favourable and minimizing adverse aerodynamic interference in external store installations
p0187 N81-15996
Study of transonic flow fields about aircraft: Application to external stores
p0187 N81-15998
Demonstration of a method for determining critical store configurations for wing store flutter
[AD-A092257] p0197 N81-16068
Experimental and theoretical study of flow fields and store forces in close proximity to a triple ejection rack at transonic speeds
[AD-A094751] p0263 N81-19030
Unsteady airloads on a harmonically pitching wing with external store

[NLR-MP-80004-U] p0330 N81-20038
Aerodynamic analysis of a fighter aircraft with a higher order paneling method
[AD-A099404] p0483 N81-26082
A study of the effects of store aerodynamic on wing/store flutter
p0490 N81-26153
EXTERNAL SURFACE CURRENTS
Improving surface current injection techniques via one- and two-dimensional models
p0189 A81-19940
EXTERNALLY BLOWN FLAPS
NT UPPER SURFACE BLOWN FLAPS
Flap survey test of a combined surface blowing model: Flow measurements at static flow conditions
[NASA-CR-152124] p0423 N81-24023
EXTRACTION
NT SOLVENT EXTRACTION
EXTRAPOLATION
Examination of the vortex regime for highly swept wings by extrapolation of the Jones method
[AAAF-NT-80-25] p0204 N81-16992
Study of the vortex conditions of wings with large sweepback by extrapolation of the Jones method
[NASA-TM-75863] p0262 N81-19026
MEGA16 - Computer program for analysis and extrapolation of stress-rupture data
[NASA-TP-1809] p0393 N81-23406
EXTRATERRESTRIAL RADIATION
NT SUNLIGHT
EXTRAVEHICULAR ACTIVITY
Annual survey of spaceflight safety systems: 11th supplement. Survey period - July 1980-June 1981
[IAF PAPER 81-251] p0607 A81-47425
EXTREMA
U RANGE (EXTREMES)
EXTREMUM VALUES
Bounds for the additional cost of near-optimal controls
p0170 A81-21075

F

F-4 AIRCRAFT
Active flutter suppression design and test - A joint U.S.-F.R.G. program
p0009 A81-11621
A stability augmentation system which covers the complete flight envelope for a F-4c aircraft without gain scheduling
p0009 A81-11622
Design of disturbance-rejection controllers for linear multivariable discrete-time systems using entire eigenstructure assignment --- onboard digital flight system of F-4 aircraft
p0155 A81-20454
Use of flight simulators in developing design load spectra for new aircraft
[AIAA 81-0513] p0301 A81-29309
Fiberglass-reinforced rigid polyurethane expedient pavement subject to simulated F-4 aircraft traffic
[AD-A089266] p0030 N81-10079
Wind tunnel investigation of the aerodynamic hysteresis phenomenon on the F-4 aircraft and its effects on aircraft motion
[AD-A089851] p0033 N81-11016
Robust control system design
p0042 N81-11275
Application of vector performance optimization to a robust control loop design for a fighter aircraft
[DFVLR-FB-80-14] p0130 N81-13970
Active flutter suppression on an F-4F aircraft with external stores using already existing control surfaces
[MBB-FE-17/S/PUB/24] p0131 N81-13972
Investigation of high-angle-of-attack maneuver-limiting factors. Part 1: Analysis and simulation --- F-4J and F-14A aircraft
[AD-A101646] p0581 N81-30113
Investigation of high-angle-of-attack maneuver-limiting factors. Part 2: Piloted simulation assessment of Bihrle departure criteria
[AD-A101647] p0581 N81-30114
Investigation of high-angle-of-attack maneuver-limiting factors. Part 3: Appendices, aerodynamic models
[AD-A101648] p0581 N81-30115

Development of an aircraft maneuver load spectrum based on VGH data
[AD-A102750] p0628 N81-32102
F-5 AIRCRAFT
ORLA - An assessment of risks --- Optimum Repair Level Analysis
p0229 A81-24257
Integrated sensor control system for RF-5E demonstrator
p0462 A81-39838
Aerodynamic analysis of a fighter aircraft with a higher order paneling method
[AD-A099404] p0483 N81-26082
F-8 AIRCRAFT
Flight experience with flight control redundancy management
p0042 N81-11274
Ground and flight test experience with a triple redundant digital fly by wire control system --- installed in F-8C aircraft
p0259 N81-19006
F-8 digital fly-by-wire aircraft analytic redundancy management flight test experience
p0485 N81-26109
F-110 AIRCRAFT
U F-4 AIRCRAFT
F-14 AIRCRAFT
Robustness properties of a new multirate digital control system
[AIAA PAPER 81-0022] p0150 A81-20545
Development of large-area damage repair procedures for the F-14A horizontal stabiliser. Phase I - Repair development
p0559 A81-44395
Investigation of high-angle-of-attack maneuver-limiting factors. Part 1: Analysis and simulation --- F-4J and F-14A aircraft
[AD-A101646] p0581 N81-30113
Investigation of high-angle-of-attack maneuver-limiting factors. Part 2: Piloted simulation assessment of Bihrle departure criteria
[AD-A101647] p0581 N81-30114
Investigation of high-angle-of-attack maneuver-limiting factors. Part 3: Appendices, aerodynamic models
[AD-A101648] p0581 N81-30115
F-15 AIRCRAFT
A case study - Real time simulation and structured design
p0172 A81-21721
Reliability growth measured by AFM 66-1 data
p0230 A81-24286
Integrated flight and fire control development and demonstration of an F-15B aircraft
p0327 A81-30359
F-15 nose landing gear shimmy, taxi test and correlative analyses
[SAE PAPER 801239] p0406 A81-34237
Staring infrared mosaic observation of an F-15 aircraft
p0463 A81-39636
Flight test of a full authority Digital Electronic Engine Control system in an F-15 aircraft
[AIAA PAPER 81-1501] p0507 A81-40912
F100 engine diagnostic system status to date
[AIAA PAPER 81-1848] p0515 A81-42199
New roles for the F-15 eagle
p0518 A81-42629
The technical and managerial challenge of integrated flight/fire control
[AIAA PAPER 81-1706] p0527 A81-43162
An investigation of the impact of aerodynamic lags on dynamic flight characteristics
[AIAA PAPER 81-1892] p0561 A81-44581
Flight evaluation of a simplified gross thrust calculation technique using an F100 turbofan engine in an F-15 airplane
[NASA-TP-1782] p0143 N81-15000
Effect of simulated in-flight thrust reversing on vertical-tail loads of F-18 and F-15 airplane models --- conducted in the Langley 16-foot transonic tunnel
[NASA-TP-1890] p0579 N81-30086
F100 engine diagnostic system status to date
p0599 N81-31210
F-16 AIRCRAFT
A lightning protection program for the F-16 fly-by-wire system
p0056 A81-14254

A case study on the F-16 fly-by-wire flight control system --- Book
p0101 A81-16719
Environmental chemistry and management of hydrazine
p0240 A81-26770
F-16 improvement program - Making the digits count
p0241 A81-26931
Avionics computer system support at Ogden ALC
p0320 A81-30243
Integration of the F-16 Weapon System Trainer
p0325 A81-30332
Rapport tactical self protection systems design
p0349 A81-31113
F-16 variable-geometry inlet design and performance
[AIAA PAPER 81-1394] p0514 A81-42184
The F-16 Halon tank inerting system
[AIAA PAPER 81-1638] p0525 A81-43138
Finite element analysis of a bird-resistant monolithic stretched acrylic canopy design for the F-16A aircraft
[AIAA PAPER 81-1640] p0525 A81-43140
Manufacturing the F-16 composite horizontal tail
p0531 A81-43646
AFTI/F-16 advanced multimode control system design for task-tailored operations
[AIAA PAPER 81-1707] p0535 A81-43955
Aircraft ground mobility system for the F-16 aircraft
[AIAA PAPER 81-1735] p0536 A81-43960
More fight for the Fighting Falcon
p0622 A81-49075
Design to cost and the F-16 multirole fighter
p0046 N81-11911
Evaluation of AFTI/F-16 restraint concepts in the + or - 2Gy environment
[AD-AC94323] p0249 N81-18034
F-16 integrated logistics support: Still time to consider economical alternatives
[PB81-137473] p0389 N81-23079

F-17 AIRCRAFT
Evaluation of wind tunnel nozzle afterbody test techniques utilizing a modern twin engine fighter geometry at Mach numbers from 0.6 to 1.2 --- YF-17 aircraft
[AD-A091545] p0126 N81-13932
Active control of an explosive wing-store flutter case
[MBB-FE-17/S/PUB/25] p0131 N81-13973
Active controls for flutter suppression and gust alleviation in supersonic aircraft --- YF-17 flutter model
[NASA-CR-163934] p0216 N81-17097

F-18 AIRCRAFT
F/A-18's landing, launch and recovery system
p0005 A81-11244
RF compatibility-environment to component part
p0056 A81-14260
F/A-18 full scale development test
p0099 A81-16579
Designing the Hornet for improved R and M
[AIAA PAPER 81-0230] p0162 A81-20688
The new look in reliability - It works --- Operational Mission Environment test program for F/A-18 aircraft
p0229 A81-24268
Design and development of the control laws for the F-18 primary flight control system
p0320 A81-30245
F/A-18 horizontal situation display
p0327 A81-30353
F/A-18 Hornet Crew Station
p0327 A81-30355
Technology advances allow multiple role radar design for the F/A-18
[SAE PAPER 801163] p0399 A81-34179
The Northrop F/A-18L Mission Simulator
[AIAA 81-0968] p0414 A81-36557
F/A-18A Initial Sea Trials
p0458 A81-38857
F/A-18A inlet/engine compatibility flight test results
[AIAA PAPER 81-1393] p0503 A81-40860
Subsonic/supersonic nonvectored aeropropulsive characteristics of nonaxisymmetric nozzles installed on an F-18 model
[AIAA PAPER 81-1445] p0504 A81-40878
Titanium net shapes by a new technology. II - F-18A parts evaluation
p0511 A81-41650
Limb restraint F-18 style
p0567 A81-46325
The Hornet's operational mission environment
p0571 A81-46491
The F/A-18 Naval Strike Fighter: Progress has been made but problems and concerns continue
[AD-A095287] p0333 N81-20069
Operational and support costs of the Navy's F/A-18 can be substantially reduced
[PB81-160814] p0487 N81-26125
Effect of simulated in-flight thrust reversing on vertical-tail loads of F-18 and F-15 airplane models --- conducted in the Langley 16-foot transonic tunnel
[NASA-TP-1890] p0579 N81-30086

F-27 AIRCRAFT
Lasting friendship. A review of the F-27 fatigue evaluation program carried out by Fokker-VFW --- performance prediction
[NLR-TR-78150-U] p0495 N81-27086

F-100 AIRCRAFT
F-100s set to become target drones
p0614 A81-48067

F-101 AIRCRAFT
Developing a Fighter Engine Derivative of the B-1/F101 engine
[SAE PAPER 801156] p0407 A81-34246

F-106 AIRCRAFT
Electromagnetic measurement of lightning strikes to aircraft
[AIAA PAPER 81-0083] p0160 A81-20588
Design of a lateral stability augmentation system for the F106 to improve lateral handling qualities during tracking
[AD-AC91014] p0094 N81-13067
In flight direct strike lightning research --- Using an F-106B Aircraft
p0259 N81-19005

F-111 AIRCRAFT
Ejection experience in F/FB-111 aircraft - 1967-1978
p0176 A81-22098
Boundary layer stability analysis of a natural laminar flow glove on the F-111 TACT airplane
p0238 A81-26503
Air Force Integration Support Facilities - Their total utility
p0320 A81-30240
Augmenting ATE with dynamic simulation testing techniques
p0320 A81-30241
Natural laminar flow flight experiment --- Langley 8-Foot Transonic Pressure Tunnel
p0260 N81-19010
Application of a performance modeling technique to an airplane with variable sweep wings
[NASA-TP-1855] p0426 N81-24088

FAB (PROGRAMMING LANGUAGE)
U FORTRAN

FABRICATION
Design and fabrication of stabilized organic matrix composites
p0005 A81-11338
Graphite polyimide fabrication research for supersonic cruise aircraft
p0182 A81-22665
A new approach to thick-film resistors
p0232 A81-24968
NASA gas turbine stator vane ring
[ASME PAPER 81-GT-208] p0318 A81-30997
The possibility of single-impact riveting of flat-top countersunk-head rivets --- for aircraft structures
p0319 A81-30164
Classification of links of assembly units with respect to the character of their connections, and calculation of the accuracy of their execution --- in airframe construction
p0319 A81-30168
The titanium industry and the fabrication of semimanufactures for aeronautics
p0416 A81-36651
Fabrication problems related to the contamination of titanium alloys
p0417 A81-36660
Pilot installations for deposition techniques in the case of components exposed to heat and for diffusion joining of power plant components
p0449 A81-37634

A hybrid composite horizontal stabilizer for the XH-2/CCR Flight Demonstrator Aircraft
[AHS 80-35] p0476 A81-40164
Manufacturing technology for low temperature composite engine frames --- for TF-34 engine
[AIAA PAPER 81-1355] p0501 A81-40837
Factors influencing the selection of tooling and fabrication methods in building a composite fuselage
p0574 A81-46628
Waterjet trimming of cured composites
p0575 A81-46632
Development of advanced interceptor substructural material --- graphite epoxy missile structures
[AD-A090127] p0038 N81-11116
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159112] p0194 N81-16042
Fabrication and physical testing of graphite composite panels utilizing woven graphite fabric with current and advanced state-of-the-art resin systems
[NASA-CR-152292] p0218 N81-17175
Fabrication process development of boron/aluminum fan blades for high bypass engines
[NASA-CR-165252] p0442 N81-25076

FABRICS
NT DACRON (TRADEMARK)
NT PARACHUTE FABRICS
Potential use of geotechnical fabric in airfield runway design --- reinforced soil systems
[AD-A092686] p0198 N81-16071
Air Force Geophysics Laboratory aerodynamically tethered balloon, 45,000 cubic feet
[AD-A096758] p0372 N81-22023
Fabric installation to minimize reflection crack on taxiways at Thule Airbase, Greenland
[AD-A103737] p0639 N81-33214
Anti-symmetric elastic properties of composite plates of satin weave cloth
[NAL-TR-649T] p0639 N81-33238

FABRY-PEROT INTERFEROMETERS
Laser scattering applications development test in AEDC tunnel B at Mach number 8
[AD-A093929] p0217 N81-17105

FABRY-PEROT LASERS
U LASERS

FACTORIALS
An approximate factorization solution of the Navier-Stokes equations for transonic flow using body-fitted coordinates with application to NACA 64A010 airfoils
p0249 N81-18024

FADING
NT SIGNAL FADING

FAIL-SAFE SYSTEMS
Improved flight control performance and failure tolerance using modern control techniques
p0008 A81-11619
Failure Indication and Corrective Action for turboshaft engines
p0106 A81-17515
A correlated random numbers generator and its use to estimate false alarm rates of airplane sensor failure detection algorithms
p0453 A81-37822
Fly-by-wire Jaguar
p0614 A81-48064
Availability requirements of the future ATC system
p0617 A81-48558
Apparatus for sensor failure detection and correction in a gas turbine engine control system
[NASA-CASE-LEW-12907-2] p0273 N81-19115

FAILURE
NT ENGINE FAILURE
NT STRUCTURAL FAILURE
NT SYSTEM FAILURES
Detecting the failure of aircraft sensors using analytical redundancy
p0042 N81-11270

FAILURE ANALYSIS
The analysis of fatigue failures
p0006 A81-11603
Nonlinear incremental analysis up to failure of aeronautical structures
p0068 A81-16307
A correlated random numbers generator and its use to estimate false alarm rates of airplane sensor failure detection algorithms
p0154 A81-20448
ORLA - An assessment of risks --- Optimum Repair Level Analysis
p0229 A81-24257
Current and future concepts in FMEA --- Failure Modes and Effects Analysis
p0229 A81-24283
Determination of aircraft structural inspection intervals
p0230 A81-24285
Analysis of vibration related failures in aero turbo-shaft engines
p0291 A81-29057
The analytical ferrograph - Some factors affecting deposit formation
p0293 A81-29077
Failure detection and isolation for tactical aircraft using the generalized likelihood test
p0321 A81-30261
Digital computer simulation of generalised fault conditions on aircraft electrical power systems
p0322 A81-30285
BIT/FIT maturity before first flight --- in B-52 G/H Offensive Avionics System
p0324 A81-30320
Mechanical properties of aluminum coatings on heat-resistant steels
p0355 A81-31668
Orientation of measurement sensors for optimum end-of-life performance
p0360 A81-32697
Is it safe - The safety assessment of aircraft systems. IV - Methods, techniques, and organisation
p0366 A81-33789
Fatigue of fibrous composite materials; Proceedings of the Symposium, San Francisco, Calif., May 22, 23, 1979
p0418 A81-37126
Compression fatigue behavior of graphite/epoxy in the presence of stress raisers
p0418 A81-37136
Prevention of corrosion and fatigue failure of helicopter gas turbine compressors
p0469 A81-40107
Helicopter accidents
[SAE PAPER 810592] p0520 A81-42751
Sensor/actuator failure detection and isolation for airbreathing propulsion systems
p0564 A81-45551
Real-time estimation in advanced turbofan engines
p0564 A81-45553
A practical probabilistic method for evaluating the fail-safeness of structures that may fail due to fatigue
p0612 A81-47888
Computer based in-flight monitoring
p0042 N81-11269
Failure management techniques for high survivability
p0042 N81-11272
Failure management for the SAAB Viggen JA37 aircraft

LQG controls for highly maneuverable aircraft --- Linear quadratic Gaussian
[AIAA PAPER 81-1709] p0527 A81-43163
Effects of displacement and rate saturation on the control of statically unstable aircraft
[AIAA 81-1752] p0554 A81-44082
Autopilot design via improved discrete modal control
[AIAA 81-1777] p0554 A81-44095
Closed-loop criteria for assessing longitudinal-axis handling qualities of transports in final approach
[AIAA 81-1773] p0556 A81-44133
Low-order approaches to high-order systems - Problems and promises --- for analysis of aircraft pitch dynamics
[AIAA 81-1774] p0556 A81-44134
Optimal multirate flight control design
p0563 A81-45522
Model following control of gas turbine engines
p0624 A81-49900
Multivariable closed-loop analysis and flight control synthesis for air-to-air tracking
[AD-A090050] p0037 N81-11086
Closed loop control systems: Aircraft. Citations from the NTIS data base
[PB80-813710] p0082 N81-12114
Active flutter suppression on an F-4F aircraft with external stores using already existing control surfaces
[MBB-FE-17/S/PUB/24] p0131 N81-13972
A study of State Feedback Implicit Model following control for VSTOL aircraft
[AD-A093253] p0216 N81-17099
Research in multirate estimation and control
[AD-A094070] p0253 N81-18062
Design of multivariable feedback control systems via spectral assignment --- as applied to aircraft flight control
[NASA-CR-164189] p0345 N81-21064
F-8C adaptive control law refinement and software development
[NASA-CR-163093] p0377 N81-22059

Pilot-optimal multivariable control synthesis by
output feedback
[NASA-CR-163112] p0540 N81-28102
A study of the performance of an Olson type active
noise controller and the possibility of the
reduction of cabin noise
[UTIAS-TN-228] p0552 N81-29924
A program to evaluate a control system based on
feedback of aerodynamic pressure differentials,
part 1
[NASA-CR-164604] p0583 N81-30134
A program to evaluate a control system based on
feedback of aerodynamic pressure differentials.
Part 2: Data report for phase 1 wind tunnel test
[NASA-CR-164605] p0584 N81-30135
A method for obtaining reduced-order control laws
for high-order systems using optimization
techniques
[NASA-TP-1876] p0589 N81-30851
A model-following technique for insensitive
aircraft control systems
p0600 N81-31223

The method of superelements in the dynamics of complex structures
p0101 A81-16849
Variational principles and generalized variational principles for the hybrid aerodynamic problem of airfoil cascades on an arbitrary stream sheet of revolution
p0107 A81-17741
Structural analysis of fuselages with cutouts by finite element method
p0108 A81-17816
Spanwise distribution of control points in the method of finite elementary solutions
[AIAA PAPER 79-1879] p0160 A81-21811
Fatigue life evaluation of a helicopter main rotor hub
p0180 A81-22631
Analysis of a symmetric transonic aerofoil with the finite element method - A new upwinding technique
p0183 A81-22906
An aeronautical structural analysis system for static analysis /HAJIF-I/
p0224 A81-23728
Calculation of nonlinear compressibility effects of airfoils in subcritical conditions
p0225 A81-23853
Conforming element with out-element nodes
p0225 A81-23856
Prediction of structural fatigue response under aircraft loads from material stress-strain behavior
p0226 A81-24080
Subsonic cascade flow analysis by a finite element method
p0233 A81-25211
Finite element calculation of thin-wall reinforced shells of the fuselage type with account for physical nonlinearity and loss of stability of certain elements
p0235 A81-25670
Use of optimization in helicopter vibration control by structural modification
p0281 A81-26846
The sweep finite element method for calculating the flow field and performance of supersonic ejector nozzles
p0291 A81-29061
An application of the energy release rate concept to crack growth in attachment lugs
[AIAA 81-0491] p0302 A81-29829
Structures, Structural Dynamics and Materials Conference, 22nd, Atlanta, Ga., April 6-8, 1981, and AIAA Dynamics Specialists Conference, Atlanta, Ga., April 9, 10, 1981, Technical Papers. Part 2
p0303 A81-29830
Free-vibration analysis of rotating beams by a variable-order finite-element method
[AIAA 81-0614] p0306 A81-29479
Transient, nonlinear response analysis of soft bodied impact on flat plates including interactive load determination

[AIAA 81-0621] p0305 A81-29482
On some methods of supersonic unsteady lifting
surface analysis
[AIAA 81-0644] p0307 A81-29497
Dynamic stability of a rotor blade using finite
element analysis
[AIAA 81-0615] p0309 A81-29513
Finite element methods for transonic
blade-to-blade calculation in turbomachines
[ASME PAPER 81-GT-5] p0310 A81-29930
A time marching finite volume method for
blade-to-blade flows using a body-fitted
curvilinear mesh
p0347 A81-30717
Coriolis effect on the vibration of flat rotating
low aspect ratio cantilever plates
p0348 A81-30914
Numerical methods for studying the stress-strain
state and service life of aircraft gas-turbine
engine disks
p0351 A81-31258
Developments in the analysis and repair of cracked
and uncracked structures
p0354 A81-31561
A Galerkin type finite element method for
rotary-wing aeroelasticity in hover and forward
flight
p0364 A81-33050
Finite element analysis of asymmetric, lateral
natural vibrations of a deformable aeroplane
p0366 A81-33736
Finite element analysis of self-excited vibrations
of helicopter rotor blades
p0395 A81-34120
The CADAM system for aircraft structural design
[SAE PAPER 801208] p0403 A81-34216
Theory and application of finite element analysis
to structural crash simulation
p0416 A81-36614
A periodic problem in viscoelasticity with
variable coefficients
p0419 A81-37143
The calculation of lift and drag characteristics
of subsonic wings with winglets
p0480 A81-40442
Stress analysis of first turbine vane using a
3-dimensional model with non linear material
behavior subjected to transient temperatures
[AIAA PAPER 81-1437] p0504 A81-40873
Application of the Semi-Loof thin shell element to
the analysis of aircraft engine structures
p0518 A81-42704
Aircraft subfloor response to crash loadings
[SAE PAPER 810614] p0522 A81-42770
Finite element analysis of a bird-resistant
monolithic stretched acrylic canopy design for
the F-16A aircraft
[AIAA PAPER 81-1640] p0525 A81-43140
Calculation of the impingement of cloud droplets
in a cylinder by the finite-element method
p0533 A81-43890
Calculation of natural vibrations for thin-walled
irregular reinforced shells of the helicopter
fuselage type using the finite-element work method
p0614 A81-48097
Finite strip analysis of singly curved
skin-stringer structures
p0616 A81-48390
Structural synthesis - Its genesis and development
p0622 A81-49076
An iterative finite element-integral technique for
predicting sound radiation from turbofan inlets
[AIAA PAPER 81-1981] p0624 A81-49736
Stability of nonuniform rotor blades in hover
using a mixed formulation
[AD-A090756] p0076 N81-12071
Finite element analysis of inviscid subsonic
boattail flow
[NASA-TM-81650] p0140 N81-14977
Finite element method study of
wing-fuselage-nacelle interactions of a Falcon
20 type aircraft at Mach = 0.79
p0187 N81-15994
Nonlinear analysis of squeeze film dampers applied
to gas turbine helicopter engines
[AD-A091905] p0196 N81-16062
A conversational, topological grid method and
optimization of structural calculations
involving finite elements
[AAAF-NT-79-30] p0210 N81-17053
Application of the finite element method to rotary
wing aeroelasticity
p0251 N81-18083
Aeroelastic and dynamic finite element analyses of
a bladder shrouded disk
[NASA-CR-159728] p0278 N81-19479
Analysis of composite laminates and fiber
composite repair schemes
[AD-A099629] p0499 N81-27206
Adaptive finite element technology in integrated
design and analysis --- aircraft structures design
[NASA-CR-164560] p0543 N81-28810

FINITE VOLUME METHOD
An implicit finite volume method for elliptical
flow computation --- numerical integration,
aerothermodynamics
p0255 N81-18240

FINITE-STATE MACHINES
U TURING MACHINES

FINNED BODIES
Application of aerodynamic jump prediction theory
to supersonic, high fineness ratio, cruciform
finned bodies
[AIAA PAPER 81-0222] p0162 A81-20685
Aerodynamic estimation techniques for aerostats
and airships
[AIAA 81-1339] p0457 A81-38542
Theoretical determination of subsonic oscillatory
airforce coefficients for fin-tailplane
configurations
[RAE-TR-79125] p0022 N81-10016

FINS
NT COOLING FINS
Development of the A300 fin in modern composite
fibre construction
p0013 A81-11653
Application of a tip-fin controller to the Shuttle
Orbiter for improved yaw control
[AIAA PAPER 81-0074] p0159 A81-20582
Analytically determined fin-tip heat transfer
coefficients
p0234 A81-25585
Model 206L composite vertical fin
[AHS 80-34] p0478 A81-40175
Development of graphite-epoxy covers for L-1011
advanced composite vertical fin
p0530 A81-43627

FIRE CONTROL
Multivariable aircraft control by manoeuvre
commands - An application to air-to-ground gunnery
[ONERA, TP NO. 1980-127] p0009 A81-11623
IFFC fire control system mechanization - Firefly III
--- for fighter aircraft
p0324 A81-30327
Integrated Flight/Weapon Control system concepts
p0324 A81-30328
Implementation of target orientation angles in
improved Kalman filter based short range radar
tracking
p0326 A81-30346
Cybernetic airborne fire control - Issues and
potential
p0326 A81-30347
Fighter fire control requirements for air battles
of the future
p0326 A81-30348
Integrated flight and fire control development and
demonstration of an F-15B aircraft
p0327 A81-30359
Operator training systems/simulators
p0349 A81-31109
Aiming computation for fighter weapon aiming system
p0480 A81-40
The technical and managerial challenge of
integrated flight/fire control
[AIAA PAPER 81-1706] p0527 A81-4316
IFFC flying qualities simulation --- Integrated
Flight/Fire Control
[AIAA 81-1821] p0555 A81-44111
Origins of inertial navigation
p0567 A81-4627
Automatic handoff of multiple targets
[AD-A093483] p0217 N81-171
Integrated strike avionics study, volume 1
[AD-A094705] p0273 N81-191
Air-to-air gunnery systems test and evaluation
p0544 N81-290

- Gun harmonization using the sector acoustic miss distance indicator p0544 N81-29074

FIRE CONTROL CIRCUITS
- Integrated Flight and Weapon Control for improved tactical combat effectiveness p0324 A81-30329

FIRE DAMAGE
- Cabin fire simulator lavatory tests [NASA-CR-160909] p0190 N81-16020

FIRE FIGHTING
- Aircraft fire and overheat detection and extinguishment [SAE PAPER 800622] p0063 A81-15340
- Mission-dedicated vehicle for passenger rescue from burning aircraft p0412 A81-35772
- Airport Crash/Fire/Rescue CFR service cost and benefit analysis. Volume 2: Appendixes [AD-A091155] p0094 N81-13069

FIRE PREVENTION
- Aircraft fire and overheat detection and extinguishment [SAE PAPER 800622] p0063 A81-15340
- Fireworthiness of transport aircraft interior systems [AIAA PAPER 81-1142] p0459 A81-39131
- Fire-proof fuel p0480 A81-40456
- Fundamental studies of antimisting fuels [AIAA PAPER 81-1422] p0515 A81-42195
- Aircraft engine nacelle fire test simulator. Volume 1: Technical [AD-A089629] p0030 N81-10081
- Aviation safety: Interior compartment materials [GPO-50-300] p0126 N81-13933
- Testimony of Elwood T. Driver, Vice Chairman, National Transportation Safety Board, accompanied by Gerrit J. Walhout, Chief, Human Factors Division, and Matthew H. McCormick, Senior Air Safety Investigator, Human Factors Division p0126 N81-13934
- Testimony of a panel consisting of: Lloyd E. Frisbee, Vice President, Engineering and Operations, Lockheed California Company; Lyle A. Wright, Director, Powerplant Engineering, Douglas Aircraft Company, accompanied by Doctor H. C. Schjelderup, Chief Technology Engineer, Materials and Process Engineering, and F. E. Duskin, Senior Design Engineer, Interiors Engineering, Douglas Aircraft Company p0127 N81-13937
- Special Aviation Fire and Explosion Reduction (SAFER) advisory committee, volume 1 [AD-A092016] p0191 N81-16024
- Evaluation of EF anechoic chamber fire protection systems [AD-A092478] p0197 N81-16070
- Fireworthiness of transport aircraft interior systems p0267 N81-19061
- Study of materials performance model for aircraft interiors [NASA-CR-152370] p0333 N81-20063
- Crashworthiness design parameter sensitivity analysis [AD-A096550] p0374 N81-22081
- Study to develop improved fire resistant aircraft passenger seat materials [NASA-CR-152408] p0386 N81-23050
- Effect of thermal radiation on the integrity pressurized aircraft evacuation slides and slide materials [AD-A098179] p0424 N81-24039
- Testing of aircraft passenger seat cushion materials. Full scale, test description and results, volume 1 [NASA-CR-160995-VOL-1] p0448 N81-25051
- Special Aviation Fire and Explosion Reduction (SAFER) Advisory Committee, volume 2B [AD-A099176] p0493 N81-27064
- Special Aviation Fire and Explosion Reduction (SAFER) Advisory Committee, volume 2A [AD-A099187] p0493 N81-27065

FIREPROOFING
- Textile materials for commercial transportation vehicles --- passenger aircraft p0532 A81-43633
- Development of assembly techniques for fire resistant aircraft interior panels [NASA-CR-152119] p0254 N81-18097
- Wing spillage tests using antimisting fuel [AD-A096326] p0388 N81-2[illegible]
- Testing of aircraft passenger seat cushion material, full scale. Data, volume 2 [NASA-CR-160963] p0448 N81-25050

FIBERS
- Large-scale carbon fiber tests [NASA-TM-80218] p0198 N81-16137
- Study of aircraft crashworthiness for fire protection [NASA-CR-166159] p0424 N81-24035

FIREWORKS

Study of a crack propagation on the flap rail of a transport aircraft
p0181 A81-22633
Evaluation of the influence of local disturbances of flow past trailing and leading flaps from wind tunnel data on a rectangular wing section
p0299 A81-29307
Measurement of derivatives for an oscillating airfoil with flap
p0411 A81-35635
A fatigue study and an investigation on mechanically fastened joints for the development of a flap
p0481 A81-40581
Flap noise characteristics measured by pressure cross correlation techniques
p0259 N81-18808
Pressure distributions for the GA(W)-2 airfoil with 20% aileron, 25% slotted flap and 30% Fowler flap
[NASA-CR-2948] p0262 N81-19023
Pitch-flap-phase coupling. A preliminary analysis of an evolving concept of helicopter autostabilization
[NU-242] p0434 N81-24109
A program to evaluate a control system based on feedback of aerodynamic pressure differentials. Part 2: Data report for phase 1 wind tunnel test
[NASA-CR-164685] p0584 N81-30135
Investigation of unsteady airloads on wings with oscillating control for active control purposes
[AGARD-R-699] p0635 N81-33161
FLASHBACK
Ignition of lean fuel-air mixtures in a premixing-prevaporizing duct at temperatures up to 1000 K
[NASA-TM-81645] p0095 N81-13065
FLAT COAXIAL TRANSMISSION LINES
U MICROSTRIP TRANSMISSION LINES
FLAT PLATES
A new approach to the solution of the boundary layer equations of an ideal compressible flow over a flat plate
p0226 A81-24002
Drag reduction of an oscillating flat plate with an interface film
p0239 A81-26504
Film cooling performance by injection through discrete holes
p0293 A81-29074
Turbine blade cooling research at the von Karman Institute for Fluid Dynamics
p0293 A81-29076
Transient, nonlinear response analysis of soft bodied impact on flat plates including interactive load determination
[AIAA 81-0621] p0305 A81-29882
Study of noise reduction characteristics of multilayered panels and dual pane windows with Helmholtz resonators
[NASA-CR-164370] p0438 N81-24857
Aeroelastic flutter and divergence of graphite/epoxy cantilevered plates with bending-torsion stiffness coupling
[AD-A101726] p0587 N81-30476
FLAW DETECTION
U NONDESTRUCTIVE TESTS
FLAWS
U DEFECTS
FLEXIBILITY
Matrix load analysis method for flexible aircraft structures
[PAPER 810610] p0522 A81-42766
Multi-plane high speed balancing techniques and the use of a high specific stiffness Ti-Borsic material for vibration control
[AD-A093122] p0215 N81-17092
FLEXIBLE BODIES
Figure control of flexible structures - Optical surfaces of thin deformable primary mirrors
p0060 A81-14994
The balancing of flexible rotors - Theoretical relation of each balancing method and accuracies
p0228 A81-24008
Problem of rotor passing through critical speed with gyroscopic effect. III - Case of rotating shaft on flexible supports
p0228 A81-24009
LTA developments in Great Britain
[AIAA 81-1321] p0456 A81-38532
Influence of landing gear flexibility on aircraft performance during ground roll
p0622 A81-49375
Model and boundary aerodynamic data from high blockage two-dimensional airfoil tests in a shallow unstreamlined transonic flexible walled test section --- transonic self-streamlining wind tunnel
[NASA-CR-165685] p0343 N81-21087
A digital program for calculating the interaction between flexible structures, unsteady aerodynamics and active controls
[NASA-TM-80040] p0496 N81-27115
Handling qualities of large flexible aircraft
p0538 N81-28081
FLEXIBLE WINGS
Calculation of airloads for a flexible wing via NASTRAN
[AD-A094770] p0263 N81-19031
Flight safety of Rogallo hang gliders. Theoretical and experimental study of the flight envelope --- wind tunnel tests for flight characteristics
[ESA-TT-634] p0339 N81-21048
FLEXING
Finite element analysis of natural and forced flexural vibrations of rotor systems
p0017 A81-11938
FLEXURE
U FLEXING
FLIGHT ALTITUDE
The effect of oxygen concentration distribution on altitude relighting performance of a turbo-jet

engine combustor
p0295 N81-29089
Measurement of aircraft speed and altitude --- Book
p0357 A81-32401
Prediction of range and endurance of jet aircraft at constant altitude
p0611 A81-47725
The NASA digital VGH program, early results --- structural design criteria
p0268 N81-19069
Sidelooking laser altimeter for a flight simulator
[NASA-CASE-ARC-11312-1] p0270 N81-19439
Laser Doppler airspeed and altitude sensor
[AD-A096980] p0375 N81-22049
An investigation of reports of Controlled Flight Toward Terrain (CFTT)
[NASA-CR-166230] p0546 N81-29108
FLIGHT CHARACTERISTICS
Identification of longitudinal flying characteristics of an aeroplane and the effect of nonstationary aerodynamics
p0010 A81-11627
Development and application of a moving base visual flight simulator including the design of hydraulic actuators with hydrostatic bearings
p0010 A81-11633
Helicopter flight characteristics improvement through swept-tip rotor blades
[MBB-UD-275-79-0] p0018 A81-12097
Influence of a change in power at the propeller on the properties of the aircraft
p0059 A81-14754
Shipboard trials of the Quiet Short-Haul Research Aircraft /QSRA/
p0099 A81-16501
History of flight testing the L-1011 Tristar jet transport. I - The L-1011-1
p0110 A81-17976
Practical aerodynamics of the helicopter Mi-6A --- Russian book
p0116 A81-18600
Aircraft lateral parameter estimation from flight data with unsteady aerodynamic modelling
[AIAA PAPER 81-0221] p0162 A81-20684
Dynamics of longitudinal motion of a variable-sweepback aeroplane with a deformable control system
p0231 A81-24722
On the inter-relationship of the basic parameters and characteristics of various flight vehicles
p0236 A81-25694
Some characteristics of aircraft motion at large angles of attack
p0414 A81-36473
Development of a generic airplane response simulation
[AIAA 81-0980] p0415 A81-36560
Air data computer for the measurement and evaluation of data of flight physics
p0451 A81-37648
Effects of drive slots on parachute performance
p0453 A81-38020
Rotor blade aeroelastic stability and response in forward flight
p0467 A81-40089
Flight tests and statistical data analysis for flying qualities investigations
p0471 A81-40121
Preliminary evaluation of RSRA data comparing pure helicopter, auxiliary propulsion and compound helicopter flight characteristics --- Rotor Systems Research Aircraft
[AHS 80-10] p0473 A81-40143
Flight test results for task oriented flying qualities evaluation
[AHS 80-29] p0476 A81-40159
Evolution of transport wings - From C-130, C-141, and C-5 to C-XX
p0510 A81-41333
The indication of the characteristics of aircraft controllability with prediction in dynamic ergatic systems
p0517 A81-42603
Longitudinal equivalent systems analysis of Navy tactical aircraft
[AIAA 81-1775] p0534 A81-44094
IFFC flying qualities simulation --- Integrated Flight/Fire Control
[AIAA 81-1821] p0553 A81-44111
Flying qualities criteria and flight control design
[AIAA 81-1823] p0556 A81-44127
Closed-loop criteria for assessing longitudinal-axis handling qualities of transports in final approach
[AIAA 81-1773] p0556 A81-44133
Low-order approaches to high-order systems - Problems and promises --- for analysis of aircraft pitch dynamics
[AIAA 81-1774] p0556 A81-44134
Lateral-directional flying qualities of transport aircraft
[AIAA PAPER 81-1887] p0561 A81-44579
A unifying framework for longitudinal flying qualities criteria
[AIAA PAPER 81-1889] p0561 A81-44580
An investigation of the impact of aerodynamic lags on dynamic flight characteristics
[AIAA PAPER 81-1892] p0561 A81-44581
SR-71 impressive in high-speed regime
p0565 A81-45747
The aerodynamic influences of rotor blade airfoils, twist, taper and solidity on hover and forward flight performance
p0572 A81-46607
Helicopter trim by periodic shooting with Newton-Raphson iteration
p0573 A81-46621
Handling qualities of the SH-60B Seahawk
p0574 A81-46627
Improved aircraft cruise by periodic control
p0034 N81-11030
A multivariate approach to handling qualities rating scale development
[AD-A089825] p0037 N81-11047
Synthesis of test results obtained with Concorde at high incidences
[AAAF-NT-80-26] p0077 N81-12079
The flying qualities of aircraft with actively augmented pitch and yaw stability
[ARC-R/M-3848] p0083 N81-12113
Pseudosteady-state analysis of nonlinear aircraft maneuvers
[NASA-TP-1758] p0094 N81-13065
The collision course: Conditions, guidance laws and properties
[DFVLR-FB-80-06] p0127 N81-13982
A flight investigation of performance and loads for a helicopter with RC-SC2 main-rotor blade sections
[NASA-TM-81898] p0186 N81-15982
On the flight mechanics of remotely piloted vehicles
[BMVG-FBWT-79-28] p0209 N81-17089
First results obtained with a rotating construction --- used in measuring flying qualities of wind tunnel aircraft models
[AAAF-NT-80-14] p0210 N81-17100
Flying qualities design criteria applicable to supersonic cruise aircraft
p0244 N81-17993
Advanced aerodynamics and active controls. Selected NASA research
[NASA-CP-2172] p0258 N81-19001
Flight safety of Rogallo hang gliders. Theoretical and experimental study of the flight envelope --- wind tunnel tests for flight characteristics
[ESA-TT-634] p0330 N81-21046
Flying-qualities criteria for wings-level-turn maneuvering during an air-to-ground weapon delivery task
[NASA-TM-81266] p0342 N81-21083
Fatigue tests on the total structure of the Gazelle SA 341 helicopter
p0400 N81-26136
Flight control system analysis and design for a remotely piloted vehicle with thrust vectoring unit
[AD-A100008] p0480 N81-28031
An investigation of the linear and angular vibration environments of trainer aircraft
p0505 N81-29067
Applications of dynamic stability parameters to problems in aircraft dynamics
p0509 N81-31122
Captive aircraft testing at high angles of attack
[AD-A103108] p0636 N81-32108
Design of optimal inputs for the identification of characteristics of aircraft flights ---

parameter identification control theory
p0631 N81-33131
The impact of helicopter flight mechanics on mission performance
p0633 N81-33148

FLIGHT COMPUTERS
U AIRBORNE/SPACEBORNE COMPUTERS

FLIGHT CONDITIONS
Atmospheric disturbance models and requirements for the flying qualities Military Standard and Handbook
[AIAA PAPER 81-0302] A81-20739
Landings according to CAT II

In-flight direct-strike lightning research
p0266 N81-19054
Magnitude and frequency of wind speed shears and associated downdrafts
p0267 N81-19055
Analyses of shuttle orbiter approach and landing conditions
[NASA-CR-163108] p0498 N81-27113
Development for helicopter flight in icing conditions
p0545 N81-29082
Operational problems experienced by single pilots in instrument meteorological conditions
[NASA-CR-166236] p0581 N81-30106

FLIGHT CONTROL
NT AUTOMATIC FLIGHT CONTROL
NT AUTOMATIC LANDING CONTROL
NT FLY BY WIRE CONTROL
NT THRUST VECTOR CONTROL
The 767's flight-management system - A new generation of airborne avionics
p0005 A81-11242
Flying qualities criteria for advanced control technology transports
p0008 A81-11618
Improved flight control performance and failure tolerance using modern control techniques
p0008 A81-11619
Multivariable aircraft control by manoeuvre commands - An application to air-to-ground gunnery
[ONERA, TP NO. 1980-127] p0009 A81-11623
DFVLR-dynamic model testing in wind tunnels for active controls research
p0014 A81-11670
A method of helicopter low airspeed estimation based on measurement of control parameters
[MBB-UD-276-79-0] p0018 A81-12094
Computerized flight management for fuel saving
p0018 A81-12349
Flight management systems - Central ingredient of the 1980's avionics shipset
[SAE PAPER 800626] p0063 A81-15348
Display-control synthesis --- computer flight graphics for aircraft applications
p0064 A81-15680
The implications of current flight control research and development
p0099 A81-16578
A fault tolerant multiprocessor system with reconfiguration suitable for multiaxial flight stabilization and trimming
p0118 A81-19296
System considerations in the implementation of digital control
[AAS 80-032] p0120 A81-19375
Angle of attack - Its measurement and usage. I
p0149 A81-19799
Design of disturbance-rejection controllers for linear multivariable discrete-time systems using entire eigenstructure assignment --- onboard digital flight system of F-4 aircraft
p0155 A81-20454
Application of singular perturbation theory to onboard aircraft trajectory optimization --- for commercial jet transport aircraft
[AIAA PAPER 81-0019] p0158 A81-20543
Robustness properties of a new multirate digital control system
[AIAA PAPER 81-0022] p0158 A81-20545
Application of a tip-fin controller to the Shuttle Orbiter for improved yaw control
[AIAA PAPER 81-0074] p0159 A81-20582
A head-up display for low-visibility approach and landing
[AIAA PAPER 81-0130] p0161 A81-20623
Piloting techniques on the backside - Flight path angle control
p0171 A81-21673
Inverse problems of the dynamics of controlled flight - Lateral motion
p0236 A81-25903
The S3 transition --- flight control logic circuit analysis
p0240 A81-26617
Developments in aircraft power flying control hydraulics
p0282 A81-27802
An objective method of assessing the realism of a simulation of a simple control system
p0284 A81-27898
The impact of active controls on general aviation airplanes of the late 1980s
p0285 A81-28295
Boeing 757 and 767 Flight Management System
p0286 A81-28299
Suboptimal constant output feedback and its application to modern flight control system design
p0288 A81-28740
Sensitivity reduction in aircraft control systems by double Perfect Model Following
p0299 A81-29205
Design and development of the control laws for the F-18 primary flight control system
p0320 A81-30245
YC-14 digital flight control experience
p0320 A81-30246
Dispersed flight control computer systems
p0321 A81-30258
Failure detection and isolation for tactical aircraft using the generalized likelihood test
p0321 A81-30261
The use of finite-state machines for describing and validating flight control systems
p0322 A81-30268
Integrated Flight/Weapon Control system concepts
p0324 A81-30328
Methods for the verification and validation of digital flight control systems
[SAE PAPER 801134] p0397 A81-34165
Flight control systems go digital - More than a binary mechanization of analog predecessors
[SAE PAPER 801166] p0399 A81-34187
757/767 flight management system
[SAE PAPER 801169] p0399 A81-34188
The use of power-adaptive and power-reversible flight control actuation systems to achieve hydraulic power and system weight savings
[SAE PAPER 801190] p0401 A81-34201
Evolution of an optical control system for aircraft hydraulics

[SAE PAPER 801195] p0402 A81-34205
Evaluation of several control/display concepts for
V/STOL shipboard landing
[SAE PAPER 801205] p0403 A81-34213
Velocity command/position hold - A new flight
control concept for hovering VTOL aircraft
[SAE PAPER 801206] p0403 A81-34214
AIRCAT 500 ATC systems for Australia and Mexico
p0407 A81-34329
Electronic displays and computerized NAV systems
for commuters and business aircraft

Flight control and display computation - A 25-year
perspective
[AIAA PAPER 81-0865] p0408 A81-34354
A-10A Operational Flight Trainer simulator flight
control system and aerodynamics
[AIAA 81-0964] p0414 A81-36555
Flight-management system - Key to the
advanced-technology fighter
p0421 A81-37523
Goals of flight management system integration for
a forward-swept-wing demonstrator aircraft
p0421 A81-37524
Experimental aircraft of the DFVLR for in-flight
simulation and flight control technology
p0452 A81-37654
The Shenandoah flies again - A computer simulation
[AIAA 81-1325] p0456 A81-38534
A half-model free-oscillation rig for
pitch-damping measurements in high speed wind
tunnels
p0461 A81-39263
Flight investigations of a helicopter low airspeed
estimation system based on measurement of
control parameters
p0470 A81-40111
A pilot's assessment of helicopter
handling-quality factors common to both agility
and instrument flying tasks
p0471 A81-40120
Flight control strategies for performance computers
p0512 A81-41759
Impact of EFIS on navigation --- Electronic Flight
Instrument System
p0517 A81-42835
The technical and managerial challenge of
integrated flight/fire control
[AIAA PAPER 81-1706] p0527 A81-43162
Modern control synthesis applied to the
longitudinal decoupled motion of an aircraft
[AIAA 81-1839] p0555 A81-44123
Flying qualities criteria and flight control design
[AIAA 81-1823] p0556 A81-44127
A flight investigation of static stability,
control augmentation, and flight director
influences on helicopter IFR handling qualities
p0574 A81-46623
Future challenges in helicopter flight/propulsion
control integration
p0575 A81-46633
Onboard procedure for the measurement of wind
shear gradients
[DGLR PAPER 81-060] p0610 A81-47612
A fail-operational duplex sensor concept for
flight control systems on the basis of
analytical redundancy
[DGLR PAPER 81-066] p0610 A81-47616
Ten years activity in the area of flight control
for helicopters at night and in bad weather
[DGLR PAPER 81-064] p0611 A81-47620
Recommended short-term ATC improvements for
helicopters. Volume 3: Operational description
of experimental LORAN-C flight following (LOFF)
in the Houston area
[AD-A089385] p0026 N81-10030
Fitment of TARAN standby attitude indicators to
Macchi aircraft
[AD-A089378] p0035 N81-11036
Simulating study of the interaction between the
propulsion and flight control systems of a
subsonic lift fan VTOL
[NASA-TM-81239] p0036 N81-11043
Flight termination receiver/decoder design,
performance and certification
[AD-A089746] p0037 N81-11045
Multivariable closed-loop analysis and flight
control synthesis for air-to-air tracking
[AD-A090050] p0037 N81-11046
Computer based in-flight monitoring
p0042 N81-11369
Detecting the failure of aircraft sensors using
analytical redundancy
p0042 N81-11370
Robust control system design
p0042 N81-11375
Practical optimal flight control system design for
helicopter aircraft. Volume 2: Software user's
guide
[NASA-CR-152306] p0081 N81-12110
Closed loop control systems: Aircraft. Citations
from the NTIS data base
[PB80-813710] p0082 N81-12114
Evaluation of a computer-generated perspective
tunnel display for flight path following

Landing flying qualities evaluation criteria for
augmented aircraft
[NASA-CR-163097] p0130 N81-13960
Validation Methods Research for Fault-Tolerant
Avionics and Control Systems Sub-Working Group
Meeting. CARE 3 peer review
[NASA-CP-2167] p0196 N81-15702
The effects of the direction of control loading on
a one-dimensional tracking task
[AD-A092459] p0197 N81-16067
Display concepts for control configured vehicles
p0213 N81-17076
Research in multirate estimation and control
[AD-A094070] p0253 N81-18042
Evaluation of factors unique to multifunction
controls/displays devices
[AD-A094227] p0258 N81-18783
The 1980 Aircraft Safety and Operating Problems,
part 1
[NASA-CP-2170-PT-1] p0264 N81-19035
Guidance and control system research for improved
terminal area operations --- terminal controlled
vehicle
p0264 N81-19038
An analytical study of the longitudinal response
of airplanes to positive wind shear
[NASA-TP-1765] p0335 N81-20082
Flying-qualities criteria for wings-level-turn
maneuvering during an air-to-ground weapon
delivery task
[NASA-TM-81266] p0342 N81-21083
Fly-by-wire versus dual mechanical controls for
the Advanced Scout Helicopter: Quantitative
comparison
[AD-A096089] p0343 N81-21085
Design of multivariable feedback control systems
via spectral assignment --- as applied to
aircraft flight control
[NASA-CR-164189] p0345 N81-21086
Investigation of air transportation technology at
Princeton University, 1980
p0371 N81-22060
Aircraft body-axis rotation measurement system
[NASA-CASE-FRC-11042-1] p0375 N81-22046
Flight evaluation of the concept of the stage A
Peripheral Vision Horizon Device (PVHD) using
the CH 135 aircraft of 403 Squadron - CFB Gagetown
[AD-A096870] p0378 N81-22058
Total energy and flight control --- energy vectors
as part of piloting schemes
[SNIAS-882-111-102] p0434 N81-24118
A pilot training manual for the terminal
configured vehicle electronic attitude director
indicator
[NASA-CR-159195] p0438 N81-24111
New Navy programs for development of integrated
inertial sensors
p0445 N81-26100
Validation study of the V/STOL aerodynamics and
stability and control manual
[AD-A099236] p0446 N81-26119
Correlation of predicted and flight derived
stability and control derivatives with
particular application to tailless delta wing
configurations --- application to the space
shuttle orbiter
[NASA-TM-81361] p0450 N81-26154
The 707 primary flight control systems reliability
and maintenance study
[NASA-CR-159010] p0458 N81-27136
Development of handling quality criteria for
aircraft with independent control of six degrees

of freeson
[AD-A100045] p0498 N81-27117
AH-1S(Prod) airworthiness and flight characteristics for instrument flight
[AD-A100986] p0548 N81-29121
Direct digital design method for reconfigurable multivariable control laws for the A-7D Digital 2 aircraft
[AD-A100794] p0549 N81-29136
A continuously reconfiguring multi-microprocessor flight control system
[AD-A101412] p0584 N81-30138
Definition, analysis and development of an optical data distribution network for integrated avionics and control systems
[NASA-CR-159370] p0590 N81-30962
Transition and conversion trim-maps for the AV-8A VTOL aircraft
[AD-A102155] p0596 N81-31188
A model-following technique for insensitive aircraft control systems
p0600 N81-31223
The control anticipation parameter for augmented aircraft
[AD-A102626] p0629 N81-32152
Investigation of unsteady airloads on wings with oscillating control for active control purposes
[AGARD-R-699] p0635 N81-33161
An experimental investigation of VTOL flying qualities requirements or shipboard landings
[AD-A104137] p0638 N81-33199

FLIGHT CREWS
NT SPACECREWS
The influence of beards on the efficiency of aviators' oxygen masks
p0176 A81-22100
A study of factors affecting aircrew survivability following emergency escape over water
p0409 A81-34697
Investigation of the physical working environment for cabin attendants within Scandinavian Airlines System /SAS/ --- noise conditions and aircraft vibration
p0568 A81-46357
Aircrew compliance with standard operating procedures as a component of airline safety
[AD-A092443] p0191 N81-16023
An investigation of the five point restraint system for aviators
[AD-A093065] p0205 N81-16998
Test and evaluation of improved aircrew restraint systems for combat helicopers
p0205 N81-17017
Special Aviation Fire and Explosion Reduction (SAFER) Advisory Committee, volume 2B
[AD-A099176] p0493 N81-27064
Information transfer within the cockpit: Problems in intracockpit communications
p0595 N81-31167
An active noise reduction system for aircrew helmets
p0604 N81-31470

FLIGHT FATIGUE
The apparent ignoring of pilot fatigue by the NTSB in airline crashes
p0177 A81-22104
Plans for control of the noise exposure produced by military aircraft in the 1980's - Aircraft noise

On the use of approximate models in helicopter flight mechanics
p0471 A81-40122
Helicopter theory --- Book
p0513 A81-41823
From paleoaeronautics to altostratus - A technical history of soaring
[AIAA PAPER 81-1611] p0533 A81-43933
Inverse problems of guided-flight dynamics - Longitudinal motion
p0577 A81-46789
Estimation of kinetic quantities of flight mechanics with a nonlinear observer
[DGLR PAPER 81-067] p0608 A81-47562
Laboratory studies of flight mechanics using catapult launched models
[AAAF-NT-80-15] p0210 N81-17055
Modeling, acquisition and processing during large displacements --- associated with experiments in flight mechanics
[AAAF-NT-80-16] p0210 N81-17056
The impact of helicopter flight mechanics on mission performance
p0633 N81-33148

FLIGHT OPERATIONS
Problems of flight mechanics involved in all-weather helicopter operation
p0104 A81-17067
Micro-wave landing system - An operational point of view
p0111 A81-18055
RNAV benefits today - Today and future requirements
p0111 A81-18056
The introduction of STOL and RNAV to large commercial operations
p0111 A81-18057
The problems of helicopter ditching
p0112 A81-18071
Human Factors of Flight-Deck Automation: NASA/Industry Workshop
[NASA-TM-81260] p0191 N81-16022
Information transfer between air traffic control and aircraft: Communication problems in flight operations
p0595 N81-31166
Information transfer during contingency operations: Emergency air-ground communications
p0595 N81-31168

FLIGHT OPTIMIZATION
L-1011 Flight Management System design considerations
p0113 A81-18078
Drag reduction through formation flight
[DGLR PAPER 80-106] p0120 A81-19393
Delco Electronics Flight Management System for Air Force C-141 aircraft
p0321 A81-30249
Fuel conservation integrated into airline economics
[AIAA PAPER 81-0831] p0368 A81-33880
Minimum fuel paths for a subsonic aircraft
p0411 A81-35636
Flight-management system - Key to the advanced-technology fighter
p0421 A81-37523
Goals of flight management system integration for a forward-swept-wing demonstrator aircraft
p0421 A81-37524
Pilot guidance and display considerations for energy efficient flight profiles
p0513 A81-41926
Optimizing complex runway use programs for airport noise abatement
p0569 A81-46369
Optimization of takeoff flight paths with respect to FAR Part 36 noise using dynamic programming
p0569 A81-46371
Choice of the optimal angular velocity of the twist of a flight vehicle
p0625 A81-49046
Generation of optimum vertical profiles for an advanced flight management system
[NASA-CR-165674] p0331 N81-20051

FLIGHT PATHS
NT GLIDE PATHS
Simple method for prediction of aircraft noise contours
p0050 A81-13217
Specifications for short instrument and precision approach path trajectories
p0051 A81-13314
Piloting techniques on the backside - Flight path angle control
p0171 A81-21673
The evaluation of aircraft collision probabilities at intersecting air routes
p0174 A81-21687
Optimization of airplane time to reach a given flight altitude and speed
p0235 A81-23685
Energy modeling for aviation fuel efficiency
[AIAA PAPER 81-0789] p0368 A81-33883
Minimum fuel paths for a subsonic aircraft
p0411 A81-35636
Precision flight path control in carrier landing approach - A case for integrated system design
[AIAA PAPER 81-1710] p0535 A81-43956
Boost-glide range-optimal guidance
[AIAA 81-1781] p0554 A81-44006
A comparison of actual and simulated horizontal flight paths - RNAV /Area Navigation/ system
p0562 A81-44761
Optimization of takeoff flight paths with respect to FAR Part 36 noise using dynamic programming

p0569 A81-46371
A novel airborne technique for free-field measurements of aircraft noise above the flight path with application to noise-shielding studies
[AIAA PAPER 81-2028] p0621 A81-48647
Recommended short-term ATC improvements for helicopters. Volume 3: Operational description of experimental LORAN-C flight following (LOFF) in the Houston area
[AD-A089385] p0024 N81-10030
Synthesis of test results obtained with Concorde at high incidences
[AAAF-NT-80-26] p0077 N81-12079
Investigation of landing flare in the presence of wind shear
[ESA-TT-631] p0077 N81-12080
Midair and near midair collisions on two- and three-dimensional curvilinear flight paths
[DFVLR-FB-80-13] p0128 N81-13944
Flight evaluation of the terminal guidance system
[NASA-CR-163859] p0142 N81-14991
Conflict monitoring analysis of parallel route spacing in the high altitude airspace, volume 2
[AD-A094152] p0250 N81-18038
Conflict monitoring analysis of parallel route spacing in the high altitude conus airspace, volume 1
[AD-A094071] p0250 N81-18041
Development and evaluation of automatic landing control laws for power lift STOL aircraft
[NASA-CR-152399] p0253 N81-18060
Test results of flight guidance for fuel conservative descents in a time-based metered air traffic environment --- terminal configured vehicle
p0264 N81-19036
Operational considerations in utilization of microwave landing system approach and landing guidance --- terminal configured vehicle
p0264 N81-19039
Generation of optimum vertical profiles for an advanced flight management system
[NASA-CR-165674] p0331 N81-20051
Evaluation of the visual acquisition range of en-route air traffic from cockpit observations
[DFVLR-MITT-80-14] p0332 N81-20058
An investigation of two safe escape from base flight profiles
[AD-A096571] p0373 N81-22034
The reconstruction of flight paths from AIDS data with the aid of modern filtering methods --- kalman filters
p0383 N81-23021
Cockpit simulation study of use of flight path angle for instrument approaches
[NASA-CR-165708] p0425 N81-24040
The FAA plans and programs for the future airport and air traffic control system
[AD-A100370] p0537 N81-28077
Minimum fuel horizontal flightpaths in the terminal area
[NASA-TM-81313] p0549 N81-29133
Minimum noise impact aircraft trajectories
[NASA-CR-164719] p0594 N81-31159

FLIGHT PERFORMANCE
U FLIGHT CHARACTERISTICS

FLIGHT PLANS
Airline navigation planning
p0174 A81-21966
Solo navigation in a light aircraft
p0407 A81-34337
IFR aircraft handled forecast by air route traffic control center, fiscal years 1980-1991
[AD-A090803] p0074 N81-12048
Operation free flight: An operational evaluation of direct route flight plan filing in today's National Aerospace System
[AD-A104150] p0636 N81-33184

FLIGHT RECORDERS
A six-channel quick-look unit for the aerodynamics division MKI airborne data acquisition package
[AD-A089975] p0043 N81-11364
Helicopter In-flight Validation System (HELIVALS)
[AD-A091129] p0092 N81-13050
An improved flight data transcriber
[AD-A091981] p0201 N81-16430
flight data recording and data processing for light airplanes and gliders
p0328 N81-20008
Experiences with flight recorders obtained by analyzing aircraft accidents
p0328 N81-20019
A technique for recovering nonsynchronized data from a digital flight data recorder
p0328 N81-20020
A quick-look system for the processing of flight data recordings
p0329 N81-20021
Contributions to the 9th Symposium on aircraft integrated data systems --- Conferences
[ESA-TT-532] p0382 N81-23008
Experiences with a Flight Data Recording System (FDRS) in a German Airforce fighter bomber wing after field trials --- digital equipment
p0382 N81-23009
Engine parameter trend analysis with LEADS 200: Possibilities and limitations --- using flight recorder data
p0382 N81-23010
The engine usage monitoring system: An heuristic approach to cost effective data monitoring and analysis --- onboard fatigue monitoring
p0382 N81-23013
Description of the British Civil Aviation Airworthiness Data Recording Programme (CAADRP) --- analysis of flight recorder data
p0383 N81-23017
The SYDAS flight data processing system
p0383 N81-23018
The use of aircraft integrated data system at KLM --- performance monitoring
p0383 N81-23019
Detection and location of faults in onboard aircraft systems with the aid of the Automatic Fault Identification System (AFIS)
p0383 N81-23022
Processing of AIDS flight recorder data for a quick look with the aid of a hybrid computer system
p0384 N81-23023
Requirements, technology and configuration evaluation for Crash Survivable Flight Data Recording (CSFDR) system
[AD-A097863] p0427 N81-24059
Requirements, technology and configuration evaluation for Crash Survivable Flight Data Recording (CSFDR) system
[AD-A098584] p0442 N81-25072
Crash survivable flight data recording system study
[AD-A101503] p0583 N81-30127

FLIGHT RULES
NT INSTRUMENT FLIGHT RULES
NT VISUAL FLIGHT RULES
Summary of Federal Aviation Administration responses to National Transportation Safety Board safety recommendations
[AD-A089971] p0033 N81-11022

FLIGHT SAFETY
Procedures to improve flight safety in wind shear conditions
p0014 A81-11666
Ground testing of aircraft antistatic protection
[ONERA, TP NO. 1980-126] p0015 A81-11674
Civil aviation safety. III - Prospects of improvement
p0017 A81-11900
Damage tolerance concept for transport aircraft structures
p0050 A81-12970
Aircraft collision avoidance and separation assurance
[SAE PAPER 800616] p0062 A81-15336
Flight management systems - Central ingredient of the 1980's avionics shipset
[SAE PAPER 800626] p0063 A81-15342
Flying safely /Revised and enlarged edition/ --- Book
p0068 A81-16198
Civil aviation safety. IV - Accident severity
p0068 A81-16422
Operational radar display of the structure of thunderstorm hail clouds
p0069 A81-16478
Micro-wave landing system - An operational point of view
p0111 A81-18055
RNAV benefits today - Today and future requirements
p0111 A81-18056

Satellites to aid flight safety
[IAF PAPER 80-IAA-17] p0115 A81-18410
Pyrotechnics serving safety --- in aircraft air and ground escape systems
p0120 A81-19348
Improved secondary radar antennas for flight safety installations
p0151 A81-20083
Survival and Flight Equipment Association, Annual Symposium, 17th, Las Vegas, Nev., December 2-6, 1979, Proceedings
p0174 A81-22076
Computer analysis of bird-resistant aircraft transparencies
p0175 A81-22087
Atmospheric electricity hazards protection for advanced technology flight vehicles
[AIAA PAPER 81-1642] p0525 A81-43141
Annual survey of spaceflight safety systems: 11th supplement. Survey period - July 1980-June 1981
[IAF PAPER 81-251] p0607 A81-47425
Availability requirements of the future ATC system
p0617 A81-48558
NASA Aviation Safety Reporting System
[NASA-TM-81225] p0023 N81-10021
Aviation safety and noise abatement
[GPO-50-923] p0032 N81-10578
Failure management for the SAAB Viggen JA37 aircraft
p0042 N81-11273
Midair and near midair collisions on two- and three-dimensional curvilinear flight paths
[DFVLR-FB-80-13] p0128 N81-13944
Measuring weather for aviation safety in the 1980's
p0136 N81-14568
Commuter airline safety
[PB81-104267] p0141 N81-14988
Lightning. Citations from the International Aerospace abstracts data base
[NASA-CR-163857] p0146 N81-15648
Cabin fire simulator lavatory tests
[NASA-CR-160909] p0190 N81-16020
Annual report to the NASA Administrator by the Aerospace Safety Advisory Panel on the space shuttle program. Part 2: Summary of information developed in the panel's fact-finding activities
[NASA-TM-82252] p0198 N81-16114
Test and evaluation of improved aircrew restraint systems for combat helicopers
p0205 N81-17017
Spin recovery training
[GPO-67-439] p0216 N81-17098
Application of the epidemiological model in studying human error in aviation
p0265 N81-19046
Summary of flight tests of an airborne lighting locator system and comparison with ground-based measurements of precipitation and turbulence
p0266 N81-19048
Wallops severe storms measurement capability
p0266 N81-19049
Initial design and experimental implementation of the traffic advisory service of ATARS
[AD-A095462] p0331 N81-20055
Flight safety of Rogallo hang gliders. Theoretical and experimental study of the flight envelope --- wind tunnel tests for flight characteristics
[ESA-TT-634] p0339 N81-21046
An update of the Discrete Address Beacon System (DABS) alternatives study
[AD-A096264] p0340 N81-21052
Results of an active beacon collision avoidance experiment conducted in the Los Angeles airspace
[AD-A096285] p0340 N81-21053
Fly-by-wire versus dual mechanical controls for the Advanced Scout Helicopter: Quantitative comparison
[AD-A096089] p0343 N81-21085
An investigation of two safe escape from base flight profiles
[AD-A096571] p0373 N81-22034
Study to develop improved fire resistant aircraft passenger seat materials
[NASA-CR-152408] p0386 N81-23058
Special Aviation Fire and Explosion Reduction (SAFER) Advisory Committee, volume 2B
[AD-A099176] p0493 N81-27064
Special Aviation Fire and Explosion Reduction (SAFER) Advisory Committee, volume 2A
[AD-A099147] p0493 N81-27065
A compendium of aircraft cockpit vision surveys, 1950 through 1980, volume 1
[AD-A101473] p0500 N81-28104
Second language speech comprehension in noise: A hazard to aviation safety
p0604 N81-31463
Takeoff and missed approach under the influence of wind shear --- flight safety considerations
[TUBS/SFB-58-80-05-01] p0628 N81-32131

FLIGHT SIMULATION
Piloted simulation studies of helicopter agility
p0003 A81-10767
Identification of longitudinal flying characteristics of an aeroplane and the effect of nonstationary aerodynamics
p0010 A81-11627
The role of flight simulation in the design and development of the Sea Harrier Nav-Attack System
p0010 A81-11635
Visual cue augmentation in contact flight simulation
p0064 A81-15696
Prediction methods for fatigue crack growth in aircraft material
p0118 A81-18777
A new concept for dynamic stability testing --- for aircraft model in orbital path
[AIAA PAPER 81-0158] p0161 A81-20638
Operation and evaluation of the Terminal Configured Vehicle Mission Simulator in an automated terminal area metering and spacing ATC environment
p0171 A81-21709
Effect of gust load alleviation on fatigue and crack growth in ALCLAD 2024-T3
p0172 A81-21739
The flight assessment and applications of DNI/DNE. I, II
p0174 A81-21968
Qualification of HiMAT flight systems
p0179 A81-22603
Simulation of apparent acceleration --- on flight test stands
p0223 A81-23405
Comparison of 2024 and 7475 aluminum alloy sheet for tension-critical aircraft structures
p0232 A81-24942
A modular low-cost raster-scan colour visual system
p0283 A81-27892
Flight simulation at Cranfield Institute of Technology
p0283 A81-27893
The role of simulation in automatic flight control systems research
p0283 A81-27894
An experimental study of transmission, reflection and scattering of sound in a free jet flight simulation facility and comparison with theory
p0289 A81-28943
An approach to ramjet trajectory simulation test
p0292 A81-29065
Aeroservoelasticity in the time domain --- for YF-16 aircraft
[AIAA 81-0635] p0306 A81-29489
B-52 Offensive Avionics System /OAS/ control and display design, using a Dynamic Mockup
p0327 A81-30354
Mathematical model of the linear unsteady aerodynamics of the entire aircraft
p0349 A81-31039
Flight Simulation Technologies Conference, Long Beach, Calif., June 16-18, 1981, Technical Papers
p0414 A81-36554
Microcomputer based engine model used in flight simulation applications
[AIAA 81-0973] p0415 A81-36562
Versatile and economical real-time simulation for digital flight control systems
[AIAA 81-0974] p0415 A81-36563
Design verification by emulation --- computer image generation for aircrew training simulation
[AIAA 81-0975] p0415 A81-36564
Development of a flight simulation capability in the dynamic environment simulator
[AIAA 81-0978] p0415 A81-36566
Development of a generic airplane response simulation

[AIAA 81-0980] p0415 A81-36568
Low-visibility visual simulation with real fog
[AIAA 81-0982] p0415 A81-36569
Improved G-Cueing System
[AIAA 81-0987] p0416 A81-36572
Experimental aircraft of the DFVLR for in-flight simulation and flight control technology
p0452 A81-37654
On the use of approximate models in helicopter flight mechanics
p0471 A81-40122
JT9D performance deterioration results from a simulated aerodynamic load test
[AIAA PAPER 81-1588] p0507 A81-40963
TELS - A facility to observe the effect of simulated flight maneuver loads on turbine engines
[AIAA PAPER 81-1591] p0508 A81-40966
Engine duty cycle estimation for conceptual design aircraft
[AIAA PAPER 81-1368] p0514 A81-42179
Status of dynamic flight test technology - Model identification for flight simulation
[SAE PAPER 810597] p0521 A81-42755
Motion-base simulator results of advanced supersonic transport handling qualities with active controls
[AIAA 81-1819] p0555 A81-44109
Investigation of control, display, and crew-loading requirements for helicopter instrument approach
[AIAA 81-1820] p0555 A81-44110
IFFC flying qualities simulation --- Integrated Flight/Fire Control
[AIAA 81-1821] p0555 A81-44111
Equivalent system analysis of translation rate command systems for hover and low speed flight
[AIAA PAPER 81-1858] p0560 A81-44557
A comparison of actual and simulated horizontal flight paths - RNAV /Area Navigation/ system
p0562 A81-44741
CH-53 Helicopter Night Vision System simulation experiments
p0573 A81-46617
A preliminary flight investigation of cross-coupling and lateral damping for nap-of-the-earth helicopter operations
p0574 A81-46626
The influence of the airspeed on jet turbulence and the consequences for the jet noise
[DGLR PAPER 81-021] p0609 A81-47595
The evolution of real-time digital simulation of aircraft for training applications
p0615 A81-48358
Time delays in flight simulator visual displays
p0615 A81-48369
Optimization of simulation models for avionics software verification
p0615 A81-48373
Acoustic and turbulence measurements of a tone-excited jet with and without flight simulation
[AIAA PAPER 81-2007] p0621 A81-48640
Noise radiated from inverted velocity profile jets under simulated flight
[AIAA PAPER 81-2026] p0623 A81-49729
Recommendations for short-term simulation of ATC concepts. Helicopter operations development program
[AD-A089435] p0025 N81-10038
A piloted simulator investigation of static stability and stability/control augmentation effects on helicopter handling qualities for instrument approach
[NASA-TM-81188] p0029 N81-10077
Pilot-aircraft system response to wind shear
[NASA-CR-3342] p0031 N81-10636
Flight simulation environmental fatigue crack propagation in 2024-T3 and 7475-T761 aluminum --- wing panels for transport aircraft
[NLR-MP-80003-U] p0043 N81-11415
A simulator study for the development and evaluation of operating procedures on a supersonic cruise research transport to minimize airport-community noise
[NASA-TP-1742] p0073 N81-12043
A mathematical model of the CH-53 helicopter
[NASA-TM-81238] p0075 N81-12065
Flight simulation environmental fatigue crack propagation in 2024-T3 and 7475-T761 aluminum
[NLR-MP-80003-U] p0086 N81-12477
Design of a lateral stability augmentation system for the F106 to improve lateral handling qualities during tracking
[AD-A091014] p0094 N81-13067
Evaluation of wind tunnel nozzle afterbody test techniques utilizing a modern twin engine fighter geometry at Mach numbers from 0.6 to 1.2 --- YF-17 aircraft
[AD-A091545] p0126 N81-13932
Development of a computer program data base of a navigation aid environment for simulated IFR flight and landing studies
[NASA-TM-80064] p0129 N81-13959
Simulator study of conventional general aviation instrument displays in path-following tasks with emphasis on pilot-induced oscillations
[NASA-TP-1776] p0142 N81-14997
Computer Generated Imagery (CGI) current technology and cost measures feasibility study
[AD-A091636] p0146 N81-15729
Simulator investigation of arrow-wing low-speed handling qualities
p0244 N81-17993
Helicopter icing review
[AD-A094175] p0252 N81-18053
The role of the research simulator in the systems development of rotorcraft
[NASA-TM-81276] p0272 N81-19101
Wind tunnel tests to determine the behavior during ejection of exterior stores at high and low speeds
[DLGR-79-096] p0272 N81-19102
Real-time feasibility for generation of nonlinear textured terrain
[AD-A095070] p0277 N81-19141
Study of oscillatory and flight dynamic behavior of helicopters in atmospheric turbulence
[BMVG-FBWT-80-4] p0342 N81-21074
Exhaust emission survey of an F100 afterburning turbofan engine at simulated altitude flight conditions
[NASA-TM-81656] p0342 N81-21078
Training effectiveness of platform motion: Review of motion research involving the advanced simulator for pilot training and the simulator for air-to-air combat
[AD-A095930] p0343 N81-21089
Performance deterioration based on simulated aerodynamic loads test, JT9D jet engine diagnostics program
[NASA-CR-165297] p0390 N81-23086
User's manual for flight Simulator Display System (FSDS)
[NASA-CR-164295] p0391 N81-23095
Airplane wing vibrations due to atmospheric turbulence
[NASA-CR-3431] p0438 N81-24679
ATC simulation of helicopter IFR approaches into major terminal areas using RNAV, MLS, and CDTI
[NASA-TM-81301] p0492 N81-27061
Characteristics of flight simulator visual systems
[AGARD-AR-164] p0541 N81-28107
Methodological approaches to identifying relevant features for visual flight
[AD-A100199] p0541 N81-28108
Fatigue crack growth in 7475-T7651 material under flight simulation loading. Information from a Douglas report --- effect of transport/bomber loads spectrum on crack growth
[VTH-M-392] p0542 N81-28493
Guidelines for line-oriented flight training, volume 1
[NASA-CP-2184] p0580 N81-30101
Investigation of high-angle-of-attack maneuver-limiting factors. Part 2: Piloted simulation assessment of Bihrle departure criteria
[AD-A101647] p0581 N81-30114
Digital data bases for visual and radar simulation
[MBB-UA-549/80-OE] p0585 N81-31143
Simulator evaluation of the effects of reduced spoiler and thrust authority on a decoupled longitudinal control system during landings in wind shear
[NASA-TM-83188] p0639 N81-33211
FLIGHT SIMULATORS
NT COCKPIT SIMULATORS
Development and application of a moving base visual flight simulator including the design of hydraulic actuators with hydrostatic bearings

A nonlinear propulsion system simulation technique for piloted simulators
p0454 A81-38064
Results of a simulator investigation of control system and display variations for an attack helicopter mission
[AHS 80-28] p0475 A81-40156
A piloted simulator investigation of static stability and stability/control augmentation effects on helicopter handling qualities for instrument approach
[AHS 80-30] p0476 A81-40160
Some experimental study on parachute dynamics by utilizing a deceleration system simulator
p0481 A81-40471
Employment of development simulation for the realization of direct side force control in the case of an attack aircraft
[DGLR PAPER 81-063] p0609 A81-47580
Probe protection in camera/model visual systems --- for helicopter flight simulators
p0615 A81-48359
The turbulent wind and its effect on flight
[UTIAS-REVIEW-44] p0033 N81-11020
Microprocessor software applications for flight training simulators
p0044 N81-11658
An equipment for testing and measuring a Helmet Mounted Sight and Display system with a coupled TV-camera in the flight simulator for research of the DFVLR
[DFVLR-MITT-80-04] p0092 N81-13052
Equipment for testing and measuring a "helmet mounted sight and display" system with a coupled movable television camera in the flight-simulator for research of the DFVLR
[DFVLR-MITT-80-04] p0129 N81-13960
Critical research issues and visual system requirements for a V/STOL training research simulator
[AD-A092561] p0198 N81-16072
The use of total simulator training in transitioning air-carrier pilots: A field evaluation
[NASA-TM-81250] p0204 N81-16994
Optical infinity lens development for flight simulator visual displays
p0212 N81-17071
Advanced flight simulator: Utilization in A-10 conversion and air-to-surface attack training
[AD-A094608] p0254 N81-18066
The role of the research simulator in the systems development of rotorcraft
[NASA-TM-81276] p0272 N81-19101
Sidelooking laser altimeter for a flight simulator
[NASA-CASE-ARC-11312-1] p0278 N81-19439
Characteristics of flight simulator visual systems
[NASA-TM-81278] p0340 N81-21060
Optical Fiber Illumination System for visual flight simulation
[NASA-CR-3409] p0343 N81-21086
Training effectiveness of platform motion: Review of motion research involving the advanced simulator for pilot training and the simulator for air-to-air combat
[AD-A095930] p0343 N81-21089
Application of computer colour raster displays in the cockpit in research flight simulation
[AD-A096542] p0377 N81-22063
A nonlinear propulsion system simulation tehnique for piloted simulators
[NASA-TM-82600] p0390 N81-23085
Development and evaluation of a prototype in-flight instrument flight rules (IFR) procedures trainer
[NASA-TM-73292] p0490 N81-26156
Assessment of scene complexity and cue validity in visual flight simulation
[AD-A100200] p0541 N81-28109
The effects of various fidelity factors on simulated helicopter hover
[AD-A102028] p0601 N81-31232
BIOCOMAID system (bionic control of acceleration induced dimming)
[AD-A102510] p0601 N81-31234
Flight simulator: Use of spacegraph display in an instructor/operator station
[AD-A101951] p0602 N81-31235
The role of the research simulator in the systems development of rotorcraft
p0633 N81-33146
FLIGHT STABILITY TESTS
Missile motion sensitivity to dynamic stability derivatives
[AD-A089750] p0038 N81-11093
Influence of light aircraft architecture on its spin characteristics
[AAAF-NT-80-11] p0081 N81-12111
Some new research approaches to aircraft spin studies
[AAAF-NT-80-12] p0082 N81-12112
In-flight handling qualities investigation of A310 Airbus DLC-configurations on landing approach, using the DFVLR-HFB 320 in-flight simulator (variable stability aircraft) --- instrument flight
[ESA-TT-630] p0276 N81-19135
Maximum likelihood identification of aircraft lateral parameters with unsteady aerodynamic modelling
p0376 N81-22057
Analytical testing
[NASA-CR-3429] p0393 N81-23487
Dynamic Stability Parameters --- conferences
[AGARD-LS-114] p0590 N81-31105
FLIGHT STRESS
Flight simulation environmental fatigue crack propagation in 2024-T3 and 7475-T761 aluminium
p0013 A81-11657
Effects of fighter attack spectrum on crack growth
p0172 A81-21741
FLIGHT TECHNICAL ERROR
J PILOT ERROR
FLIGHT TEST INSTRUMENTS
A mobile emissions laboratory for on-line analysis of combustion products from gas turbine engines
p0361 A81-32872
FLIGHT TEST VEHICLES
AD-1 oblique wing aircraft program
[SAE PAPER 801180] p0400 A81-34193
A single gimbal/strapdown inertial navigation system for use on spin stabilized flight test vehicles
[SAND-80-2479C] p0193 N81-16037
FLIGHT TESTS
NT FLIGHT STABILITY TESTS
NT SPACE TRANSPORTATION SYSTEM 1 FLIGHT
Active flutter suppression design and test - A joint U.S.-F.R.G. program
p0009 A81-11621
Reduction of the take-off ground run distance to a given set of atmospheric condition
p0010 A81-11634
Design and tests of an helicopter rotor blade with evolutive profile
[ONERA, TP NO. 1980-125] p0011 A81-11636

FLIGHT TESTS CONTD

Structural flight load testing, calibration and analysis p0013 A81-11656

Investigation of the stalling characteristics of a general aviation aircraft p0014 A81-11665

Initial experience with methods to evaluate flight test characteristics with operational flight maneuvers p0017 A81-11782

Helicopter flight characteristics improvement through swept-tip rotor blades [MBB-UD-275-79-0] p0018 A81-12097

Store separation trajectory analysis p0050 A81-13216

The technical contributions of the Wright brothers to aviation p0058 A81-14388

Active suppression of aircraft flutter p0059 A81-14397

Research on mechanical flight problems in aircraft parachute systems p0065 A81-15706

F/A-18 full scale development test p0099 A81-16579

Head-Up-Display flight tests p0099 A81-16582

The PZL-Sokol - New Polish helicopter p0103 A81-17325

Development and operational flight test of the model 250-C28B gas turbine engine p0105 A81-17512

Engine-airframe transient compatibility - Analysis and test p0106 A81-17517

Exhaust gas reingestion measurements --- in helicopters p0106 A81-17521

History of flight testing the L-1011 Tristar jet transport. I - The L-1011-1 p0110 A81-17976

Testing model rotorcraft for overwater operations p0111 A81-18058

Circulation Control Wing /CCW/ flight tests p0122 A81-19469

A status report on NASA general aviation stall/spin flight testing p0122 A81-19471

Development and demonstration of an automatic control and recovery system for remotely piloted vehicles p0156 A81-20476

The XV-15 - An initial Navy look [AIAA PAPER 81-0155] p0161 A81-20635

Flight experiments with a slender cone at angle of attack [AIAA PAPER 81-0337] p0165 A81-20761

Low level, adverse attitude escape using a vertical seeking ejection seat p0176 A81-22094

Analytical methods for store separation flight test p0177 A81-22344

Flight test evaluation of a digital controller used in a VTOL automatic approach and landing system p0179 A81-22549

Pulsed laser mapping system for light aircraft p0223 A81-23671

On the application of self-adaptive flight control system based on energy balance theory p0224 A81-23733

Helicopter-ship qualification testing p0232 A81-24941

Back to basics - The philosophy adopted for the flight testing of the Panavia Tornado avionics system in hack aircraft p0282 A81-27881

Building the Gossamer Albatross p0286 A81-28461

In-flight structural dynamic characteristics of the XV-15 tilt rotor research aircraft [AIAA 81-0612] p0304 A81-29474

Comparison of analysis and flight test data for a drone aircraft with active flutter suppression [AIAA 81-0640] p0306 A81-29495

Flight test results of an active flutter suppression system installed on a remotely piloted research vehicle [AIAA 81-0655] p0308 A81-29507

Application of a flight test and data analysis technique to flutter of a drone aircraft [AIAA 81-0652] p0308 A81-29511

BIT/FIT maturity before first flight --- in B-52 G/H Offensive Avionics System p0324 A81-30320

The reconstruction/refiltering approach to Kalman filter evaluation --- in long-range aircraft avionics p0326 A81-30339

Integrated flight and fire control development and demonstration of an F-15B aircraft p0327 A81-30359

Design and testing of float landing gear systems for helicopters p0356 A81-32007

Modern techniques of conducting a flight loads survey based on experience gained on the Black Hawk helicopter p0356 A81-32014

Microprocessor-based digital air data computer for flight test p0361 A81-32858

A flight test real-time GW-CG computing system p0361 A81-32860

Sun powered aircraft design [AIAA PAPER 81-0916] p0363 A81-32932

A review of the installation, performance and economic aspects of a high altitude facility for small gas turbines [SAE PAPER 801121] p0396 A81-34157

HiMAT systems development results and projections [SAE PAPER 801175] p0400 A81-34188

Flight test reliability demonstration of electronic engine controls [SAE PAPER 801201] p0403 A81-34211

Flight test experience using advanced airborne equipment in a time-based metered traffic environment [SAE PAPER 801207] p0403 A81-34215

Multi service applications for advancing blade concept aircraft [SAE PAPER 801226] p0405 A81-34229

Estimation of dynamic stability parameters from drop model flight tests p0410 A81-35551

Wake vortex alleviation [AIAA PAPER 81-0798] p0412 A81-35723

Supersonic aircraft test experience - Test techniques and data analysis methods p0419 A81-37299

The biparametric cycle count method and the principle of simplification --- in determination of aircraft structural fatigue life p0419 A81-37337

Wing of new technology test specimen - Structural design and method of wing construction p0450 A81-37639

Aerodynamic efficiency of the wing of new technology, a comparison of design expectation and flight test result p0450 A81-37645

Fiber optic system test results in a tactical military aircraft p0452 A81-37659

Not all student design projects end on paper - Chronology of the Chrysalis --- test procedure of human powered aircraft p0455 A81-38332

Design and engineering of solar balloons p0455 A81-38333

Effect of acceleration switching during INS in-flight alignment p0458 A81-38897

ABC aircraft development status p0467 A81-40084

Analysis and application of compliant rotor technology p0467 A81-40086

Aerodynamic design of the Aerospatiale SA 365 N Dauphin 2 helicopter p0468 A81-40099

The dominant acoustic radiation surfaces of a helicopter cabin p0468 A81-40102

U.K. development of a rotor de-icing system p0469 A81-40103

Real time analysis for helicopter flight testing p0470 A81-40112

A new approach to low speed-low height testing and
flight manual data presentation
p0471 A81-40119
Flight tests and statistical data analysis for
flying qualities investigations
p0471 A81-40121
Parameter identification of a hingeless rotor
helicopter in flight conditions with increased
instability
p0471 A81-40123
Research into a helicopter rotor's speed and load
factor limits
p0471 A81-40124
Flight evaluation of a helmet mounted LED matrix
display in a Lynx helicopter
p0472 A81-40129
ABC development status and design considerations
for several military applications --- Advancing
Blade Concept for helicopter
[AHS 80-12] p0474 A81-40145
Navigation errors encountered using
weather-mapping radar for helicopter IFR
guidance to oil rigs
[AHS 80-16] p0474 A81-40147
Flight test results for task oriented flying
qualities evaluation
[AHS 80-29] p0476 A81-40159
Composite flight service evaluation program for
helicopters
[AHS 80-46] p0477 A81-40173
NASA/FAA flight-test investigation of helicopter
microwave landing system approaches
[AHS 80-55] p0478 A81-40180
Advancing blade concept /ABC/ high speed development
p0478 A81-40182
F/A-18A inlet/engine compatibility flight test
results
[AIAA PAPER 81-1393] p0503 A81-40860
Flight test of a full authority Digital Electronic
Engine Control system in an F-15 aircraft
[AIAA PAPER 81-1501] p0507 A81-40912
Flight test investigation of LORAN-C for civil
aviation applications
p0512 A81-41762
Evaluation of LORAN-C for non-precision approach
applications
p0512 A81-41763
F100 engine diagnostic system status to date
[AIAA PAPER 81-1448] p0515 A81-42139
Evaluation of Loran-C for enroute navigation and
non-precision approach within the state of Vermont
p0516 A81-42433
Development of a simple, self-contained flight
test data acquisition system
[SAE PAPER 810596] p0520 A81-42754
Status of dynamic flight test technology - Model
identification for flight simulation
[SAE PAPER 810597] p0521 A81-42755
Analytical techniques for the analysis of
stall/spin flight test data
[SAE PAPER 810599] p0521 A81-42756
Investigation of a flight test method for the
measurement of propeller thrust
[SAE PAPER 810603] p0521 A81-42760
Vortex drag reduction by diffusing vanes - Design
for the 'Thrush' agricultural aircraft
[SAE PAPER 810605] p0521 A81-42762
Avco Lycoming's ALF 502 high bypass fan engine
[SAE PAPER 810618] p0523 A81-42773
Development of simplified airborne computations
for fuel conservative descents in a time-based
metered air traffic environment
[SAE PAPER 810642] p0524 A81-42785
Flight test evaluation of advanced symbology for
general aviation approach to landing displays
[AIAA PAPER 81-1643] p0526 A81-43142
Standard Avionics Testbeds
[AIAA PAPER 81-1734] p0528 A81-43172
Application of pulse code modulation technology to
aircraft dynamics data acquisition
[AIAA PAPER 81-1736] p0528 A81-43173
NASA service experience with composite components
--- for aircraft structures
p0529 A81-43607
Spin research on a twin-engine aircraft
[AIAA PAPER 81-1667] p0534 A81-43903
Flight test results for the F-8 digital
fly-by-wire aircraft control sensor analytic
redundancy management technique
[AIAA 81-1796] p0546 A81-44135
An economical approach to automated flight test
data reduction
p0576 A81-46693
Instrumentation for measurement of flow properties
on a swept wing in flight
[DGLR PAPER 81-034] p0608 A81-47585
Flight test of the 747-JT9D for airframe and
jet-flap interaction noise
[AIAA PAPER 81-2037] p0620 A81-48629
The effect of flight and the presence of an
airframe on engine exhaust noise
[AIAA PAPER 81-2029] p0623 A81-49727
In-flight measurement of aerodynamic loads on
captive stores. Equipment and results
[NLR-MP-79013-U] p0022 N81-10012
The use of data items on aircraft performance
measurement
[ESDU-80009] p0026 N81-10053
Flight test results of the HFB 320 model following
control system for the in-flight simulation of
Airbus A 130
[DFVLR-MITT-79-13] p0030 N81-10078
Aircraft turbine engine monitoring experience. An
overview and lessons learned from selected case
studies
[AD-A089752] p0036 N81-11082
Constant-amplitude and flight-by-flight tests on
CFRP specimens
p0039 N81-11133
Flight evaluation of the effect of winglets on
performance and handling qualities of a
single-engine general aviation airplane
[NASA-TM-81892] p0071 N81-12012
Pilatus porter: Provision of revised take-off and
landing performance data
[AD-A089964] p0076 N81-12068

Flight test evaluation of a nonlinear hub spring on a UH-1H helicopter
[AD-A098794] p0486 N81-26121
Subsonic tests of an all-flush-pressure-orifice air data system
[NASA-TP-1871] p0489 N81-26144
Development and evaluation of a prototype in-flight instrument flight rules (IFR) procedures trainer
[NASA-TM-73292] p0490 N81-26156
Thunderstorm hazards flight research: Storm hazards 1980 overview
[NASA-TM-81974] p0493 N81-27062
Flight test evaluation of predicted light aircraft drag, performance, and stability
[NASA-CR-159062] p0494 N81-27078
Development of handling quality criteria for aircraft with independent control of six degrees of freedom
[AD-A100045] p0498 N81-27117
Flight testing and instrumentation of aircraft navigation systems
p0544 N81-29067
Systems integration of automatic flight control, navigational calculations, and visual control (caravelle alis)
p0544 N81-29068
Onboard and ground test of an autonomous navigation system based on terrain correlation
p0544 N81-29069
Alignment of a navigation and attack system for the alpha jet aircraft
p0544 N81-29070
Air-to-air gunnery systems test and evaluation
p0544 N81-29073
Methods of testing aircraft performance under icing conditions and ice tection systems
p0545 N81-29083
Programmable multipurpose flight test instrumentation system
p0545 N81-29085
A method for measuring take-off and landing performance of aircraft, using an inertial sensing system
p0545 N81-29088
Some experiences with active control of aeroelastic response
[NASA-TM-83179] p0587 N81-30469
Recent progress in V/STOL aircraft technology
p0633 N81-33144
A flight test evaluation of the Ball-Bartoe jetwing propulsive lift concept
[AD-A103579] p0637 N81-33195
Flight test of a pure-tone acoustic source --- aircraft noise
[NASA-TP-1898] p0641 N81-33945

FLIGHT TIME
Prediction of range and endurance of jet aircraft at constant altitude
p0611 A81-47725
Method for computation of structural failure probability for an aircraft
[AD-AC98294] p0426 N81-24050

FLIGHT TRAINING
Transfer and cost effectiveness of ground-based flight trainers
p0064 A81-15693
Recommended short-term ATC improvements for helicopters. Volume 2: Recommended helicopter ATC training material
[AD-A089441] p0024 N81-10029
Fitment of TAMAM standby attitude indicators to Macchi aircraft
[AD-A089378] p0035 N81-11036
Flight test handbook: Flying qualities theory and flight test techniques
[AD-A090525] p0076 N81-12073
Advanced flight simulator: Utilization in A-10 conversion and air-to-surface attack training
[AD-A094608] p0254 N81-18066
Air Force and Navy plans to acquire trainer aircraft
[AD-A096237] p0342 N81-21072

FLIGHT VEHICLES
Investigation of high-manoeuvrability flight vehicle dynamics
p0009 A81-11625
Optimal flight vehicle design and linear vector spaces
p0014 A81-11668
Gyrostabilizers for inertial control systems --- Russian book

p0017 A81-12028
Roll stabilization of flight vehicles by means of rollerons
p0290 A81-29016
Complex computation of flywheel power systems for flight vehicles
p0319 A81-30158
Flight-vehicle production technology --- Russian book
p0564 A81-45603
Choice of the optimal angular velocity of the twist of a flight vehicle
p0625 A81-49946
FLIR DETECTORS
Forward-looking infrared /FLIR/ sensor for autonomous vehicles
p0357 A81-32490
Advanced target tracking by dynamic scene analysis
p0358 A81-32499
Forward looking infrared /FLIR/ image enhancement for the automatic target cuer system
p0461 A81-39335
Feature extraction from forward locking infrared /FLIR/ imagery
p0461 A81-39338
Design considerations for U.S. Coast Guard search and surveillance Forward Looking Infrared /FLIR/ system
p0463 A81-39647
French Army testing of Forward Looking Infra-Red System /FLIR/ on helicopters /November 1976-June 1977/
p0464 A81-39680
An assessment of technical factors influencing the potential use of RPVS for minefield detection
[AD-A092682] p0194 N81-16047
Survivability study of a FLIR equipment fighter on a night penetration of a Soviet army
[AD-A101186] p0547 N81-29120
FLOATS
Development of retardation and automatic flotation system (R.A.F.T.)
[AD-A096828] p0439 N81-25047
CH-53E emergency flotation system design study
[AD-A101640] p0548 N81-29124
FLOORS
Floor and fuel vibration isolation systems for the Boeing Vertol commercial Chinook
p0356 A81-32016
Energy absorption studied to reduce aircraft crash forces
[NASA-NEWS-RELEASE-81-96] p0492 N81-27060
FLOTATION
Testing model rotorcraft for overwater operations
p0111 A81-18058
The problems of helicopter ditching
p0112 A81-18071
Design and testing of float landing gear systems for helicopters
p0356 A81-32007
FLOTATION SYSTEMS
U FLOATS
FLOW
Adaptive-wall wind-tunnel investigations
[AD-A096325] p0343 N81-21088
FLOW CHARACTERISTICS
NT BOUNDARY LAYER STABILITY
NT FLAME STABILITY
NT FLOW DISTRIBUTION
NT FLOW STABILITY
NT FLOW VELOCITY
Transonic flow past a wing profile in channels with permeable walls
p0054 A81-13533
Solutions for slightly over- or under-expanded hot supersonic jets exhausting into cold subsonic mainstreams
[AIAA PAPER 81-0257] p0163 A81-20705
Characteristics of nonequilibrium flow with ionization in a region perturbed by a thin blunt body
p0231 A81-24732
Calculation of circular flow inhomogeneities downstream of the turbine wheel
p0281 A81-27372
Flowfield studies of dump combustors
p0292 A81-29064
Cooling air flow characteristics in gas turbine components
[ASME PAPER 81-GT-76] p0313 A81-29986
An experimental and theoretical investigation of a twin-entry radial flow turbine under non-steady flow conditions
[SAE PAPER 801136] p0397 A81-34167
Strong pressure waves in air-breathing engines
[AIAA PAPER 81-1475] p0505 A81-40895
Some ejector characteristics
[AIAA PAPER 81-1679] p0534 A81-43940
Analytical estimation on nonlinear longitudinal characteristics of wings with small and moderate aspect ratio by the vortex lattice method in incompressible flow
[ESA-TT-585] p0022 N81-10010
The European Transonic Wind tunnel ETW
p0030 N81-11064
Time dependent Navier-Stokes solution of a turbulent gas jet ejected from a rectangular orifice into a high-subsonic crossflow
p0138 N81-14964
An investigation of the reacting and non-reacting flow characteristics of solid ramjets
[AD-A094567] p0253 N81-18059
On the influence of steady state temperature and pressure distortion on the flow characteristics in an installed multistage jet engine compressor --- heated intake air
[PNR-90022] p0275 N81-19126
Description of 0.186-scale model of high-speed duct of national transonic facility
[NASA-TM-81949] p0377 N81-22061
Some remarks on the unsteady airloads on oscillating control surfaces in subsonic flow
p0386 N81-23055
Aeroacoustics of a porous plug jet noise suppressor
[NASA-CR-164549] p0500 N81-27884
FLOW CHARTS
A survey of computer simulations of digital avionics systems
[AD-A091943] p0195 N81-16049
FLOW COEFFICIENTS
NT DISCHARGE COEFFICIENT
FLOW DEFLECTION
Effects of design variables on spoiler control effectiveness, hinge moments, and wake turbulence
[AIAA PAPER 81-0072] p0159 A81-20501
FLOW DIRECTION INDICATORS
Experimental investigations on the V/STOL tunnel at NASA/Langley Research Center
[NASA-CR-165655] p0329 N81-20028
FLOW DISTORTION
Flow past a slender profile in a channel with permeable walls
p0004 A81-10916
Lift effect on transonic wind-tunnel blockage
p0066 A81-15883
Steady flow past a rectangular wing with circulation that is variable along the span
p0099 A81-16551
A preliminary experimental investigation of the response of a turbojet engine to inlet pressure distortion
p0108 A81-17824
Inlet flow distortion in turbomachinery
[ASME PAPER 80-GT-20] p0109 A81-17952
Characteristics of the velocity field near a wing-body combination located at an angle of attack to an oncoming supersonic flow
p0119 A81-19337
The practical application of the Wake Blocking Corrections according to Maskell --- for large wind tunnel models
[DGLR PAPER 80-112] p0121 A81-19396
The numerical solution of incompressible turbulent flow over airfoils
[AIAA PAPER 81-0047] p0158 A81-20563
Dynamic pressure response with stall on axial flow compressor rotor blades
[AIAA PAPER 81-0069] p0159 A81-20578
Characteristics of nonequilibrium flow with ionization in a region perturbed by a thin blunt body
p0231 A81-24732
Effect of contraction on screen-generated turbulence
p0284 A81-27900
Evaluation of the influence of local disturbances of flow past trailing and leading flaps from wind tunnel data on a rectangular wing section
p0299 A81-29307

Roll length of an annular underexpanded jet formed by a sonic nozzle with cylindrical rod on its axis
p0309 A81-29867
Subsonic gas flow past a wing profile
p0349 A81-31034
Investigation of instantaneous distortions in air intakes at high angles of attack
[AAAF PAPER NT 80-38] p0369 A81-33931
Tests for inlet distortion in a two-spool turbojet engine on the ground test bed
p0419 A81-37340
Inlet distortion and blade vibration in turbomachines
p0421 A81-37631
A perspective on developing new inlet distortion measurement and predictive methods
[AIAA PAPER 81-1589] p0507 A81-40964
Assessment of inflow control structure effectiveness and design system development
[AIAA PAPER 81-2048] p0620 A81-48637
Discussion of test results in the design of laminar airfoils for competition gliders
[NASA-TM-75402] p0186 N81-15984
On the influence of steady state temperature and pressure distortion on the flow characteristics in an installed multistage jet engine compressor --- heated intake air
[PNR-90022] p0275 N81-19126
Computer analysis of flow perturbations generated by placement of choke bumps in a wind tunnel
[NASA-TP-1892] p0579 N81-30088

FLOW DISTRIBUTION
Calculation of the flow field around engine-wing-configurations
p0007 A81-11613
Experimental investigations to fully map the flow field around a wind tunnel model of a transport airplane
[SAE PAPER 800630] p0063 A81-15345
The supercritical profile of the supercritical wing
p0107 A81-17522
The measurement and analysis of station parameters of a turbojet engine
p0109 A81-17825
The coordinate-deformation method in the problem of a supersonic gas flow over an airfoil --- delta wings
p0123 A81-19631
Particle dynamics of inlet flow fields with swirling vanes
[AIAA PAPER 81-0001] p0156 A81-20526
Numerical study of a scramjet engine flow field
[AIAA PAPER 81-0186] p0162 A81-20659
Higher-accuracy finite-difference schemes for transonic airfoil flowfield calculations
[AIAA PAPER 81-0381] p0166 A81-20794
Flow visualization through the use of the smoke-wire technique
[AIAA PAPER 81-0412] p0168 A81-20816
A discrete vortex method for the non-steady separated flow over an airfoil
p0179 A81-22568
Transonic flow calculations over two-dimensional canard-wing systems
[AIAA PAPER 79-1565] p0183 A81-23367
Calculation of internal and external flow field and cowl pressure drag in the supersonic axisymmetric nose inlets
p0224 A81-23730
A contribution to the computation of transonic supersonic flows over blunt bodies
p0230 A81-24423
The effect of sound on the vortex-shedding from a circular cylinder - Acoustical vibrations directed along axis of cylinder
p0233 A81-25312
Linearized analysis of the three-dimensional compressible flow through a rotating annular blade row
p0234 A81-25446
Partially confined multiple jet mixing
p0234 A81-25513
The sweep finite element method for calculating the flow field and performance of supersonic ejector nozzles
p0291 A81-29061
Flowfield studies of dump combustors
p0292 A81-29064
Three dimensional flow in annular diffusers with two vortex distributions at entry
p0297 A81-29112
Flow separation in inlets at incidence angles
p0297 A81-29114
A diagonal form of an implicit approximate-factorization algorithm
p0300 A81-29363
Experimental investigation into the reaction of a boundary layer to external periodic disturbances
p0309 A81-29866
Improved particle trajectory calculations through turbomachinery affected by coal ash particles
[ASME PAPER 81-GT-53] p0312 A81-29965
Rotor-tip leakage. I - Basic methodology
[ASME PAPER 81-GT-71] p0313 A81-29980
A simple model for compressor stall cell propagation
[ASME PAPER 81-GT-73] p0313 A81-29982
Streamwise flow and heat transfer distributions for jet array impingement with crossflow
[ASME PAPER 81-GT-77] p0313 A81-29985
The present role of high speed cascade testing
[ASME PAPER 81-GT-95] p0314 A81-30002
Experimental investigation of a low hub-to-tip ratio single stage transonic fan
[ASME PAPER 81-GT-209] p0318 A81-30098
Calculation of the flow pattern behind an aircraft wing
p0349 A81-31041
Analysis of stalled airfoils by simultaneous perturbations to viscous and inviscid equations
[AIAA PAPER 81-1239] p0454 A81-38096
Numerical simulation for the design of a supersonic cruise nozzle with a fluid noise shield
[AIAA PAPER 81-1218] p0458 A81-39006
Improved combustor domes designed for hot streak reduction
[AIAA PAPER 81-1352] p0501 A81-40835
Assessment of inflow control structure effectiveness and design system development
[AIAA PAPER 81-2048] p0620 A81-48637
Analysis of calculated three-dimensional inviscid flow fields with embedded shock waves (presentation of a field solution), part 1
[ESA-TT-558] p0022 N81-10017
Effects of boundary-layer treatment on cryogenic wind-tunnel controls
[NASA-CR-159372] p0083 N81-12120
An investigation into grid patching techniques
p0137 N81-14708
Study of transonic flow fields about aircraft: Application to external stores
p0187 N81-15998
Aerodynamic subsonic/transonic aircraft design studies by numerical methods
p0187 N81-15999
Aerodynamic interaction between a close-coupled canard and a sweptback wing in transonic flow
p0189 N81-16013
Validation of a two dimensional primitive variable computer code for flow fields in jet engine test cells
[AD-A092138] p0196 N81-16060
Three dimensional internal flows in turbomachinery, volume 1
[AD-A092737] p0197 N81-16065
ZDEAPT-A graphite code for VTOL aircraft ground footprint visualization
[AD-A093311] p0208 N81-17042
Laser scattering applications development test in AEDC tunnel B at Mach number 8
[AD-A093929] p0217 N81-17105
The influence of the compressibility in simulating the conduct of exterior loads of a carrier
[MBB-FE-122/S/PUB/17] p0220 N81-17483
Prediction of particle paths for flow of a gas/solids suspension through a cascade of flat plates
p0256 N81-18352
Investigation of impingement region and wall jets formed by the interaction of high aspect ratio lift jets and a ground plane
[NASA-CR-152174] p0261 N81-19017
Measurement of canard wakes
[AD-A095063] p0263 N81-19029
Experimental and theoretical study of flow fields and store forces in close proximity to a triple ejection rack at transonic speeds
[AD-A094751] p0263 N81-19030

An interactive computational aerodynamics analysis program
[AD-A094765] p0263 N81-19033
Experimental investigation of the flow on the suction side of a thin Delta wing
[NASA-TM-75897] p0330 N81-21024
Application of holography to the study of helicopter rotor flow fields
[NASA-CR-164293] p0392 N81-23433
An experimental investigation of a large delta P settling chamber for a supersonic pilot quiet tunnel
[NASA-CR-3436] p0434 N81-24112
A review of the wall pressure signature and other tunnel constraint correction methods for high angle-of-attack tests
p0435 N81-24122
An engineering method for estimating the induced lift on V/STOL aircraft hovering in and out of ground effect
[AD-A098509] p0441 N81-25069
The criticality of engine exhaust simulations on VSTOL model-measured ground effects
p0486 N81-26115
Some qualitative experiments on the local flow about spoilers in unsteady motion at low speeds
[PB81-166159] p0487 N81-26124
The supercritical profile of the supercritical wing
[NASA-TM-76605] p0494 N81-27075
Unpowered aerodynamic characteristics of a 15-percent scale model of a twin-engine commuter aircraft
[NASA-TM-81284] p0537 N81-28055
Study of an engine flow diverter system for a large scale ejector powered aircraft model
[NASA-CR-166163] p0540 N81-28096
End wall flows in rotors and stators of a single stage compressor
[NASA-CR-164635] p0540 N81-28097
An investigation of engine influence on inlet performance --- conducted in the Ames 40- by 80-foot wind tunnel
[NASA-CR-166136] p0579 N81-30084
Three-dimensional transonic flow analysis
[AD-A101944] p0593 N81-31153
Basic studies of body vortices at high angles of attack and supersonic speeds
[AD-A102241] p0594 N81-31154
Program of research in laminar flow control in the JIAFS at NASA Langley Research Center
[NASA-CR-164843] p0627 N81-32121
Evaluation of pressure and thermal data from a wind tunnel test of a large-scale, powered, STOL fighter model
[NASA-CR-166170] p0635 N81-33162
FLOW EQUATIONS
NT VORTICITY EQUATIONS
Numerical solutions of transonic flows by parametric differentiation and integral equation techniques
p0067 A81-15896
Body-fitted 3-D full-potential flow analysis of complex ducts and inlets
[AIAA PAPER 81-0002] p0156 A81-20527
New approach to the solution of large, full matrix equations --- Neumann problem for inviscid incompressible flow past airfoils
p0171 A81-21552
Numerical solution of the direct one-dimensional problem of a critical flow in nozzles
p0288 A81-28578
An investigation into grid patching techniques
p0137 N81-14708
FLOW FIELDS
U FLOW DISTRIBUTION
FLOW GEOMETRY
Asymmetric flow of subsonic and sonic jets over an infinite wedge
p0004 A81-10919
An example of the transonic flow past a body with a discontinuity in the contour curvature
p0019 A81-12367
Attainability of an attached flow in a nozzle with heavily curved walls
p0054 A81-13548
Sound generation by vortex shedding from a profile within a channel
p0054 A81-13570
A numerical simulation of hypersonic viscous flow over arbitrary geometries at angle of attack
[AIAA PAPER 81-0050] p0158 A81-20546
Generation of vortex noise in flow past a profile in a channel
p0230 A81-24134
Curved-flow, rolling-flow, and oscillatory pure-yawing wind-tunnel test methods for determination of dynamic stability derivatives
p0241 A81-26933
On a generalization of Kaden's problem --- of initially planar semi-infinite vortex sheet rollup
p0280 A81-28676
Sudden expansion injection for ram-rockets
p0293 A81-29071
A geometrical study of the steady-state spin for a typical low-wing general aviation aircraft
p0454 A81-38023
Development of finite-volume methods for three-dimensional transonic flows
[AD-A090829] p0141 N81-14986
Turbine modeling technique to generate off-design performance data for both single and multistage axial-flow turbines
[NASA-CR-165244] p0213 N81-17078
A design of multi-element aerofoils for high lift
[NAL-TR-631] p0337 N81-21012
FLOW MEASUREMENT
High-lift investigations on some small aspect ratio wings
p0011 A81-11643
Instantaneous velocity measurements in a periodically pulsed plane turbulent jet
p0066 A81-15895
Vector and scalar characteristics of opposing jets discharging normally into a cross-stream
p0110 A81-17997
Measurements of flow quality in the Ames 2 x 2ft transonic wind tunnel
[AIAA PAPER 81-0156] p0161 A81-20636
A survey of recent atmospheric turbulence measurements from a subsonic aircraft
[AIAA PAPER 81-0298] p0164 A81-20736
The static pressure in a vortex core
p0228 A81-24072
Miniature pressure probe for measuring the surface-shear-stress vector in turbulent flow
p0233 A81-25354
Device for lubricant flow measurement and conservation
p0288 A81-28743
Analysis of the difficulties in high performance compressor data reduction
[ONERA, TP NO. 1981-7] p0296 A81-29107
Experimental investigation of oscillating subsonic jets
p0360 A81-32777
An acquisition and analysis system for the dynamic testing of air intakes
[ONERA, TP NO. 1981-37] p0466 A81-35240
Instrumentation for measurement of flow properties on a swept wing in flight
[DGLR PAPER 81-034] p0609 A81-47585
Measured pressure distributions and shock shapes on a simple delta wing
p0617 A81-48479
Experimental investigations on the V/STOL tunnel at NASA/Langley Research Center
[NASA-CR-165655] p0329 N81-20020
The role of coherent structures in the generation of noise for subsonic jets
[NASA-CR-164214] p0380 N81-22833
Flap survey test of a combined surface blowing model: Flow measurements at static flow conditions
[NASA-CR-152124] p0423 N81-24023
Aeroelastic instability stoppers for wind-tunnel models
[NASA-CASE-LAR-12720-1] p0601 N81-31229

One-dimensional considerations concerning the stability behavior of inlet diffusers for supersonic aircraft --- German thesis
p0107 A81-17540
Dialogue on bridging some gaps in stability and transition research --- in external, internal and free-shear layer through-flow systems
p0115 A81-18105
The influence of flow disturbances on the laminar-turbulent transition in a supersonic boundary layer
p0124 A81-19643
Wall cooling and the laminar-turbulent boundary layer transition at supersonic flow velocities
p0124 A81-19644
Experiments on the linear and non-linear evolution of the double helical instability in jets
[AIAA PAPER 81-0415] p0168 A81-20818
Low drag airfoil design utilizing passive laminar flow and coupled diffusion control
p0239 A81-26512
The effect of impeller tip design on the performance of a mixed flow turbocharger compressor
[ASME PAPER 81-GT-7] p0310 A81-29932
Low drag airfoil design utilizing passive laminar flow and coupled diffusion control techniques
[AD-A090778] p0072 N81-12024
Shear layer instability noise produced by various jet nozzle configurations
[PNR-90018] p0086 N81-12825
Static source locations for four nozzles mounted on a J-85 engine
[NASA-CR-152401] p0143 N81-14998
TF34 engine compression system computer study --- simulation of flow stability
[NASA-CR-155889] p0143 N81-15005
Oscillatory flows from shock induced separations on biconvex aerofoils of varying thickness in ventilated wind tunnels
p0386 N81-23056
Aeroelastic instability stoppers for wind-tunnel models
[NASA-CASE-LAR-12720-1] p0601 N81-31229
FLOW THEORY
A simplified theory of oscillating aerofoils in transonic flow - Review and extension
p0060 A81-14945
Non-isoenergetic turbulent jet mixing in a constant area duct --- in turbofan engines
[AIAA PAPER 81-0347] p0165 A81-20768
Unsteady Newton-Busemann flow theory. I - Airfoils
p0234 A81-25512
Discussion of the pressure-source aerosonic theory and of Doak's criticism
p0238 A81-26189
New interpretations in the theory of viscous incompressible fluid flow past airfoil profiles
p0349 A81-31044
Accuracy and application of a second-order theory for three-dimensional supersonic and low hypersonic unsteady flows around a thin wing
p0419 A81-37335
The high-speed airfoil program
p0185 N81-15970
FLOW VELOCITY
Calculation of the flow field around engine-wing-configurations
p0007 A81-11613
Method for reducing the tangential velocities in aircraft trailing vortices
p0066 A81-15880
Instantaneous velocity measurements in a periodically pulsed plane turbulent jet
p0066 A81-15895
Vector and scalar characteristics of opposing jets discharging normally into a cross-stream
p0110 A81-17997
A computational model for low speed flows past airfoils with spoilers
[AIAA PAPER 81-0253] p0163 A81-20702
Fundamental studies on the control of turbulent boundary layers. I Theoretical and experimental analyses of velocity profiles and parameters with and without adverse pressure gradient, with uniform suction through a porous flat plate
p0228 A81-24079
A computer simulation of turbulent jet flow
p0230 A81-24420
Partially confined multiple jet mixing
p0234 A81-25513
A method for measuring the velocity field in a stalled flow
p0287 A81-28523
A simple model for compressor stall cell propagation
[ASME PAPER 81-GT-73] p0313 A81-29982
Concerning Khristianovich's transformation of a subsonic flow past an airfoil into a low-speed flow
p0349 A81-31045
Local approximation of a vortex layer by a system of discrete vortices
p0577 A81-46782
Effect of hole geometry and Electric-Discharge Machining (EDM) on airflow rates through small diameter holes in turbine blade material
[NASA-TP-1716] p0078 N81-12089
Dynamics of a helicopter-slung load system
p0092 N81-13051
Evaluation of flow quality in two large NASA wind tunnels at transonic speeds
[NASA-TP-1737] p0095 N81-13303
Analysis of unsteady pressure measurements on an aerofoil section with an harmonically oscillating, slotted flap
[DFVLR-FB-80-22] p0126 N81-13929
Computer evaluation of the on-and-off design of an axial air turbine

Active flutter suppression design and test - A joint U.S.-F.R.G. program
p0009 A81-11621
Practical gust load alleviation and flutter suppression control laws based on a LQG methodology --- Linear Quadratic Gaussian
[AIAA PAPER 81-0021] p0158 A81-20544
Historical development of flutter
[AIAA 81-0591] p0302 A81-29419
Investigations of helicopter structural dynamics and a comparison with ground vibration tests
p0467 A81-40087
Development of antiresonance force isolators for helicopter vibration reduction
p0467 A81-40091
Lateral flutter of loads towed beneath helicopters and its avoidance
p0470 A81-40114
Damping applications in aero-propulsion systems
p0613 A81-47999
Force and moment coefficients for high deflection cascades
[CUED/A-TURBO/TR-98] p0090 N81-13021
Passive control of wing/store flutter
[NASA-TM-81865] p0125 N81-13922
Active flutter suppression on an F-4F aircraft with external stores using already existing control surfaces
[MBB-FE-17/S/PUB/24] p0131 N81-13972
Active control of an explosive wing-store flutter case
[MBB-FE-17/S/PUB/25] p0131 N81-13973
Demonstration of a method for determining critical store configurations for wing store flutter
[AD-A092257] p0197 N81-16068
Design for active and passive flutter suppression and gust alleviation
p0253 N81-18063
An experimental investigation of the effects of trailing-edge strips on the unsteady aerodynamic forces on tabs
[AD-A094989] p0263 N81-19028
NASTRAN level 16 user's manual updates for aeroelastic analysis of bladed discs
[NASA-CR-159824] p0279 N81-19481
The development of a theoretical and experimental model for the study of active suppression of wing flutter
p0376 N81-22058
Application of a flight test and data analysis technique to flutter of a drone aircraft
[NASA-TM-83136] p0441 N81-25066
Semi-actuator disk theory for compressor choke flutter
[NASA-CR-3426] p0442 N81-25075
Measurement of aerodynamic work during fan flutter
[NASA-TM-82652] p0443 N81-25080
Overview: NASA/AF/Navy Symposium on Aeroelasticity of Turbine Engines
[NASA-CR-164419] p0444 N81-25089
Flight test results of an active flutter suppression system installed on a remotely piloted research vehicle
[NASA-TM-83132] p0486 N81-26110
A study of the effects of store aerodynamic on wing/store flutter
p0490 N81-26153
Qualitative comparison of calculated turbulence responses with wind-tunnel measurements for a DC-10 derivative wing with an active control system
[NASA-TM-83144] p0491 N81-26496
Final design and fabrication of an active control system for flutter suppression on a supercritical aeroelastic research wing
[NASA-CR-165714] p0498 N81-27114
Wind-tunnel evaluation of NASA developed control laws for flutter suppression on a DC-10 derivative wing
[NASA-TM-83143] p0499 N81-27548
Aeroelastic flutter and divergence of graphite/epoxy cantilevered plates with bending-torsion stiffness coupling
[AD-A101726] p0587 N81-30476
Investigation of unsteady airloads on wings with oscillating control for active control purposes
[AGARD-R-699] p0635 N81-33161
FLUTTER ANALYSIS
Influence of boundary-layer suction on the emission spectrum on a thin plate performing oscillations under the action of pressure pulsations --- in aircraft noise reduction
p0054 A81-13573
Active suppression of aircraft flutter
p0059 A81-14397
Calculation of critical flutter speeds on an aircraft in subsonic flow
p0068 A81-16301
A frequency-domain technique for aeroelastic mode estimation
p0156 A81-20475
Initial development for a flutter analysis of damaged T-38 horizontal stabilators using NASTRAN
[AIAA PAPER 81-0365] p0166 A81-20784
Influence of boundary-layer suction on the spectrum of radiation from a thin plate vibrating under the action of pressure fluctuations --- in aircraft noise reduction
p0238 A81-26137
Aeroelastic stability of aircraft --- Russian book
p0281 A81-27531

Practical experiences with flow-induced vibrations; Proceedings of the Symposium, Universitaet Karlsruhe, Karlsruhe, West Germany, September 3-6, 1979 p0282 A81-27610

Flutter of plates and shells in practice p0282 A81-27611

Experimental verification of unsteady aerodynamic models of supersonic unstalled flutter p0295 A81-29094

Comparison of two methods for the reduction of free decaying data in aircraft flutter tests [NAE-LTR-HA-43] p0298 A81-29145

Experimental study of the snap-through oscillations of an empennage p0299 A81-29313

Your next ground vibration test doesn't have to cost a million dollars [AIAA 81-0529] p0303 A81-29450

A study of the effect of store aerodynamics of wing/store flutter [AIAA 81-0604] p0304 A81-29467

Evaluation of methods for prediction and prevention of wing/store flutter [AIAA 81-0606] p0304 A81-29469

Prediction of transonic flutter for a supercritical wing by modified strip analysis and comparison with experiment [AIAA 81-0609] p0304 A81-29471

Dynamic analysis of a free-tip rotor [AIAA 81-0618] p0305 A81-29479

Active control of forward swept wings with divergence and flutter aeroelastic instabilities [AIAA 81-0637] p0306 A81-29491

Wind-tunnel evaluation of NASA developed control laws for flutter suppression on a DC-10 derivative wing [AIAA 81-0639] p0306 A81-29493

Qualitative comparison of calculated turbulence responses with wind-tunnel measurements for a DC-10 derivative wing with an active control system [AIAA 81-0567] p0306 A81-29494

Comparison of analysis and flight test data for a drone aircraft with active flutter suppression [AIAA 81-0640] p0306 A81-29495

A new frequency parameter for unsteady aerodynamics [AIAA 81-0649] p0307 A81-29502

Transonic flutter and gust-response tests and analyses of a wind-tunnel model of a torsion-free-wing fighter airplane [AIAA 81-0650] p0307 A81-29503

A wind-tunnel study of the flutter characteristics of a supercritical wing p0308 A81-29504

Flight test results of an active flutter suppression system installed on a remotely piloted research vehicle [AIAA 81-0655] p0308 A81-29507

Subcritical flutter and oscillatory pressure testing of a full-scale 727 inboard aileron in a low-speed wind-tunnel [AIAA 81-0656] p0308 A81-29508

Application of a flight test and data analysis technique to flutter of a drone aircraft [AIAA 81-0652] p0308 A81-29511

Non-linear oscillator models in bluff body aeroelasticity p0340 A81-30786

Influence of hinge line gap on aerodynamic forces acting on a harmonically oscillating thin profile in an incompressible flow. I, II p0348 A81-30956

A new method of airfoil flutter control p0367 A81-33844

Finite element analysis of self-excited vibrations of helicopter rotor blades p0395 A81-34120

Three-dimensional oscillatory piecewise continuous-kernel function method. I - Basic problems. II - Geometrically continuous wings. III - Wings with geometrical discontinuities p0411 A81-35631

Measurement of derivatives for an oscillating airfoil with flap p0411 A81-35635

Concerning one self-similarity property in flutter analysis p0413 A81-36464

Aeroelastic stability analysis of hingeless rotor helicopters in forward flight using blade and airframe normal modes [AHS 80-24] p0475 A81-40184

Vibrations in technical equipment. Volume 3 - Oscillations of machines, structures, and their components --- Russian book p0511 A81-41725

A preliminary divergence and flutter evaluation of an X-wing aircraft [AIAA PAPER 81-1671] p0534 A81-43985

Transonic dip mechanism of flutter of a sweptback wing. II p0559 A81-44847

Design and construction of a model which is dynamically similar to the A310 wing [DGLR PAPER 81-035] p0608 A81-47556

Stability and flutter analysis of turbine blades at low speed p0612 A81-47959

On the numerical analysis of stall flutter in turbine cascade p0613 A81-47963

Stability analysis of the twin mode model of coupled flexion-torsion vibrations in aeroengine fans p0613 A81-47966

Report on a cooperative programme on Active Flutter Suppression [AGARD-R-689] p0082 N81-12115

Wind tunnel test of a fighter aircraft wing/store flutter suppression system: An international effort p0082 N81-12116

Test and analyses of an active flutter suppression system on an FFDL model of YF17 p0082 N81-12118

Effects of nonlinearities on wing store flutter [MBB-FE-17/S/PUB/27] p0131 N81-13974

Active controls for flutter suppression and gust alleviation in supersonic aircraft --- YF-17 flutter model [NASA-CR-163934] p0216 N81-17097

Investigation of an improved flutter speed prediction technique for damaged T-38 horizontal stabilators using NASTRAN [AD-A094769] p0273 N81-19109

U FLIR DETECTORS
FOSSIL FUELS
NT CRUDE OIL
FOULING
Some effects of compressor fouling on the behavior
of a turbojet engine --- as evidenced by an
engine monitoring system
p0328 N81-20015
Combustion system processes leading to corrosive
deposits
[NASA-TM-81752] p0391 N81-23243
FOUNDATIONS
Probabilistic analysis of foundation forces for a
class of unbalanced rotating machines
p0145 N81-15362
FOURIER ANALYSIS
NT FOURIER SERIES
Application of a Fourier analyzer to the analysis
of shimmy test data
[AIAA 81-0533] p0303 A81-29453
Potential of optical Fourier analysis for
measuring windscreen distortion
[AD-A094127] p0259 N81-18853
FOURIER SERIES
A pure direct force/moment control for coaxial
counterrotating rotors
p0144 N81-15007
FOURIER TRANSFORMATION
Investigation of EMAT base system for the
detection of bolt hole type cracks. Part 1:
Detection of cracks in the inaccessible lower
half wing lap joints using EMATs
[AD-A094349] p0257 N81-18419
Investigation of EMAT base system for the
detection of bolt hole type cracks. Part 2:
Reliability evaluation and system definition for
detection of cracks under fasteners by EMATs
[AD-A094350] p0258 N81-18420
The 1H and 13C fourier transform NMR
characterization of jet fuels derived from
alternate energy sources
[AD-A098305] p0437 N81-24284
FRACTOGRAPHY
Possibility of development of an
electron-fractographic method for measuring
stress level produced by fatigue fracture of the
material
p0532 A81-43773
FRACTURE MECHANICS
Fatigue damage mechanisms in composite materials -
A review
p0003 A81-10747
On understanding environment-enhanced fatigue
crack growth - A fundamental approach
p0003 A81-10749
Application of fracture mechanics in designing
lower wing skin of transport aircraft
p0102 A81-17049
Effect of load spectrum variables on fatigue crack
initiation and propagation; Proceedings of the
Symposium, San Francisco, Calif., May 21, 1979
p0172 A81-21730
An engineering model for assessing load sequencing
effects --- cracks in aircraft structures
p0172 A81-21737
Ductile fracture mechanic assessments of
2219-T851, 2024-T3 and 7075-T6 aluminum alloys
p0180 A81-22628
Laws of unstable crack growth under cyclic loading
p0236 A81-25701
Simple methods of determining stress intensity
factors
p0289 A81-28984
Estimated service life of gas turbine engine
compressor blades
p0417 A81-36680
Test methods and design allowables for fibrous
composites; Proceedings of the Symposium,
Dearborn, MI, October 2, 3, 1979
p0611 A81-47001
Developing design allowables for composite
helicopter structures
p0611 A81-47011
Disk residual life studies. Part 1: F100
1st-stage turbine disk (IN100)
[AD-A089791] p0036 N81-11081
Application of fracture mechanics to US Air Force
aircraft structural integrity requirements
[AAAF-NT-79-25] p0086 N81-12463
Application of fracture mechanics to built-up
structures --- aircraft handbooks

[SAE PAPER 801230] p0405 A81-34232
Effect of refining variables on the properties and composition of JP-5
[AD-A093842] p0219 N81-17281
Effect of hydroprocessing severity on characteristics of jet fuel from OSCO 2 and Paraho distillates
[NASA-TP-1768] p0436 N81-24283

FUEL PUMPS
Numerical solution of a supersonic ejector pump
p0413 A81-35939
High pressure fuel pumps - Their design and evolution /The 13th J. D. North Memorial Lecture/
p0513 A81-42052

FUEL SPRAYS
The method for calculating the fuel concentration field in the downstream positions of the pressure jet atomizer in the high temperature gas-stream
p0224 A81-23731
A comparison of two droplet models for gas-turbine combustion chamber flows
p0294 A81-29086
Some factors affecting altitude relighting performance of turbojet engine combustor
[ASME PAPER 81-GT-49] p0312 A81-29962
Fundamental investigation on jet engine ignition of fuel sprays and its application
p0420 A81-37341
Degradation and characterization of antimisting kerosene /AMK/
[AIAA PAPER 81-1423] p0503 A81-40867
Semi-empirical analysis of liquid fuel distribution downstream of a plain orifice injector under cross-stream air flow
[AIAA PAPER 81-1467] p0505 A81-40887
Autoignition characteristics of aircraft-type fuels
p0562 A81-44666

FUEL SYSTEMS
NT AIRCRAFT FUEL SYSTEMS
Advanced fuel system technology for utilizing broadened property aircraft fuels
p0007 A81-11612
Evolutions in business jet fuel systems as seen in the Falcon Jet series
[SAE PAPER 800621] p0062 A81-15339
An approach to ramjet trajectory simulation test
p0292 A81-29065
Rating hydrogen as a potential aviation fuel
[SAE PAPER 80-1152] p0406 A81-34243
Electronic control system for a modern turboprop engine
[SAE PAPER 810620] p0523 A81-42775
Supercritical fuel injection system
[NASA-CASE-LEW-12990-1] p0549 N81-29129

FUEL TANKS
NT WING TANKS
The problem of hoar-frost formation in aircraft fuel tanks
p0319 A81-30159
Floor and fuel vibration isolation systems for the Boeing Vertol commercial Chinook
p0356 A81-32016
The F-16 Halon tank inerting system
[AIAA PAPER 81-1638] p0525 A81-43130
Application of reduced natural longitudinal stability in the Airbus program
[DGLR PAPER 81-062] p0610 A81-47609
Numerical simulation of hydrodynamic ram --- for aircraft fuel tanks
p0615 A81-48351
The resistance of tank protective measures to microorganisms
[SNIAS-801-551-107] p0144 N81-15072
Static charge in aircraft fuel tanks
[AD-A093552] p0208 N81-17045
Flame tube and ballistic evaluation of Explosafe aluminum foil for aircraft fuel tank explosion protection --- suppressing combustion overpressure
[AD-A093542] p0208 N81-17046
Evaluation of explosafe. Explosion suppression system for aircraft fuel tank protection
[AD-A093125] p0209 N81-17047
Test and evaluation of foam-in-place fuel tank container
[AD-A095747] p0334 N81-20073

FUEL TESTS
Advanced fuel system technology for utilizing broadened property aircraft fuels
p0007 A81-11612
Comparative evaluation of the quality of jet fuels
p0103 A81-17371
Application of water cooling for improved gas turbine fuel flexibility and availability
[ASME PAPER 81-GT-68] p0313 A81-29977
Experimental study of the stability of aircraft fuels at elevated temperatures
[NASA-CR-165165] p0084 N81-12255
Evaluation of fuel character effects J79 smokeless combustor
[AD-A095057] p0278 N81-19323
Effect of hydroprocessing severity on characteristics of jet fuel from OSCO 2 and Paraho distillates
[NASA-TP-1768] p0436 N81-24283
Aviation turbine fuels 1980
[DOE/BETC/PPS-81/2] p0445 N81-25255
Behavior of fuels at low temperatures
[AD-A100332] p0542 N81-28276

FUEL-AIR RATIO
A model for the analysis of premixing-prevaporizing fuel-air mixing passages
[AIAA PAPER 81-0345] p0165 A81-20767
Fresh mixture entrainment in a jet curtain flameholder
p0294 A81-29084
Some factors affecting altitude relighting performance of turbojet engine combustor
[ASME PAPER 81-GT-49] p0312 A81-29962
Improved combustor domes designed for hot streak reduction
[AIAA PAPER 81-1352] p0501 A81-40835
Autoignition characteristics of aircraft-type fuels
p0562 A81-44666
Ignition of lean fuel-air mixtures in a premixing-prevaporizing duct at temperatures up to 1000 K
[NASA-TM-81645] p0095 N81-13465
Fuel injector characterization studies
[NASA-CR-165200] p0143 N81-15003
An investigation of air solubility in Jet A fuel at high pressures
[NASA-CR-154170] p0344 N81-21211
Minimum ignition energy of F40 aircraft fuel/air mixtures
[FBL-1978-22] p0436 N81-24213
Simplified design point performance model of a dry turbofan engine cycle
[NASA-TM-83112] p0490 N81-26148

Propagation of three-dimensional acoustic perturbations in channels of variable cross-sectional area at frequencies close to cutoff frequency
p0119 A81-19338
Plane vortex gas flows --- emphasizing supersonic case
p0123 A81-19634
The digital simulation of stability for multi-stage axial compressor
p0225 A81-23856
The accuracy of mean-stream-line method in subsonic and transonic regions
p0296 A81-29105
Subsonic gas flow past a wing profile
p0349 A81-31034
Droplet breakup regimes and criteria for their existence
p0614 A81-48079
Investigation of plume induced separation on a full-size missile at supersonic velocities
[AD-A094742] p0277 N81-19212
Unsteady swirling flows in gas turbines --- aircraft engines and aeroacoustics
[AD-A102852] p0629 N81-32150

GAS GENERATOR ENGINES
U GAS GENERATORS

GAS GENERATORS
The status of the expendable gasifier program --- gas generator for aircraft engine
[SAE PAPER 801151] p0406 A81-34242
A new approach to turboshaft engine growth
[AHS 80-41] p0477 A81-40165
Effect of a part-span variable inlet guide vane on the performance of a high-bypass turbofan engine
[AIAA PAPER 81-1362] p0502 A81-40842

GAS HEATING
Considerations of the use of vitiated preheat --- for engine inlets
p0150 A81-20023

GAS INJECTION
The sweep finite element method for calculating the flow field and performance of supersonic ejector nozzles
p0291 A81-29061

Sudden expansion injection for ram-rockets
p0293 A81-29071

Film cooling performance by injection through discrete holes
p0293 A81-29074

GAS IONIZATION
Characteristics of nonequilibrium flow with ionization in a region perturbed by a thin blunt body
p0231 A81-24732

GAS JETS
Interferometric study of the initial stage of supersonic jets of gases with various specific-heat ratios from conical nozzles
p0068 A81-16231

Characteristics of thermal energy separation in a gas ejector
p0281 A81-27371

Interaction of a gas jet from a jet engine with the destroyed surface of a multiphase disperse medium
p0319 A81-30152

External burning propulsion analysis
[AIAA PAPER 81-1477] p0505 A81-40897

Time dependent Navier-Stokes solution of a turbulent gas jet ejected from a rectangular orifice into a high-subsonic crossflow
p0138 N81-14964

GAS LASERS
NT CARBON DIOXIDE LASERS

  gas turbine engines. II
p0299 A81-29305
A new method for torsion of shaft with variable
  diameter using non-orthogonal curvilinear
  coordinates and its application
  [AIAA 81-0477] p0300 A81-29378
Material shortages - Effect on the aircraft engine
  industry
  [AIAA 81-0509] p0301 A81-29387
Gas turbine engineering: Applications, cycles and
  characteristics --- Book
p0309 A81-29680
The evaluation of fuel property effects on Air
  Force gas turbine engines - Program Genesis
  [ASME PAPER 81-GT-1] p0310 A81-29926
An exploratory study of soot sample integrity and
  probe perturbation in a swirl-stabilised combustor
  [ASME PAPER 81-GT-27] p0311 A81-29943
Preliminary study on reheat combustor for advanced
  gas turbine
  [ASME PAPER 81-GT-29] p0311 A81-29944
Carbon/carbon components for advanced gas turbine
  engines
  [ASME PAPER 81-GT-35] p0312 A81-29949
Economics of heavy fuels in gas turbines and
  combined cycles
  [ASME PAPER 81-GT-45] p0312 A81-29959
Full-flow debris monitoring in gas turbine engines
  [ASME PAPER 81-GT-60] p0313 A81-29970
Application of water cooling for improved gas
  turbine fuel flexibility and availability
  [ASME PAPER 81-GT-68] p0313 A81-29977
Cooling air flow characteristics in gas turbine
  components
  [ASME PAPER 81-GT-76] p0313 A81-29984
Measurement of heat flux and pressure in a turbine
  stage
  [ASME PAPER 81-GT-88] p0314 A81-29995
Sensitivity of turbine blade temperatures to
  tolerances of design variables
  [ASME PAPER 81-GT-90] p0314 A81-29997
Low NO/x/ and fuel flexible gas turbine combustors
  [ASME PAPER 81-GT-99] p0315 A81-30006
Modified Brayton cycles utilizing alcohol fuels
  [ASME PAPER 81-GT-103] p0315 A81-30009
Flow transition phenomena and heat transfer over
  the pressure surfaces of gas turbine blades
  [ASME PAPER 81-GT-107] p0315 A81-30012
Design analysis of high-efficiency low-stress
  ceramic gas turbines
  [ASME PAPER 81-GT-130] p0316 A81-30034
An investigation of a preswirled cooling airflow
  to a turbine disc by measuring the air
  temperature in the rotating channels
  [ASME PAPER 81-GT-132] p0316 A81-30035
A versatile microprocessor controller for low cost
  helicopter applications
  [ASME PAPER 81-GT-137] p0316 A81-30039
The Navy PATE program --- Propulsion Automatic
  Test Equipment
  [ASME PAPER 81-GT-189] p0317 A81-30082
A generalised mathematical model to estimate gas
  turbine starting characteristics
  [ASME PAPER 81-GT-202] p0318 A81-30092
NASA gas turbine stator vane ring
  [ASME PAPER 81-GT-208] p0318 A81-30097
Cooled radial in-flow turbines for advanced gas
  turbine engines
  [ASME PAPER 81-GT-213] p0318 A81-30102
Driving dynamics of a high-speed
  positive-displacement pump and gas-turbine drive
  during startup --- of flight vehicles
p0319 A81-30155
Computation of wall temperature and heat flux
  distributions of the film cooled walls
p0348 A81-30802
Numerical methods for studying the stress-strain
  state and service life of aircraft gas-turbine
  engine disks
p0351 A81-31250
Experimental determination of the stress intensity
  factor for cracks with a curvilinear front in
  complex parts /gas turbine blades/
p0351 A81-31264
Mechanical properties of aluminum coatings on
  heat-resistant steels
p0355 A81-31668
Fatigue strength of gas turbine engine rotor
  blades in connection with structural changes in
  service
p0355 A81-31673
Centralized in-place pressure calibration system
  for multiple turbine engine aerodynamic pressure
  measurement systems
p0360 A81-32847
A mobile emissions laboratory for on-line analysis
  of combustion products from gas turbine engines
p0361 A81-32872
Thermoplastic strengthening of a gas-turbine
  engine disk lock joint - Determination of the
  residual stresses
p0365 A81-33169
Bearing wear detection using radioactive iron-55
  tagging
  [ASLE PREPRINT 81-AM-6A-3] p0367 A81-33860
Results of thermal tests on the GTA-18 gas turbine
  unit with the RD-3M-500 jet engine

p0395 A81-34022

A review of the installation, performance and
economic aspects of a high altitude facility for
small gas turbines
[SAE PAPER 801121] p0396 A81-34157

A forward look at gas turbine testing facilities
[SAE PAPER 801124] p0396 A81-34159

Loss model for off-design performance analysis of
radial turbines with pivoting-vane,
variable-area stators
[SAE PAPER 801135] p0397 A81-34166

An experimental and theoretical investigation of a
twin-entry radial flow turbine under non-steady
flow conditions
[SAE PAPER 801136] p0397 A81-34167

Composite wall concept for high-temperature
turbine shrouds - Heat transfer analysis
[SAE PAPER 801138] p0397 A81-34169

Some advantages of methane in an aircraft gas
turbine
[SAE PAPER 801154] p0398 A81-34177

Overview of ARP 1587 aircraft gas turbine Engine
Monitoring System guide
[SAE PAPER 801216] p0404 A81-34224

The High Performance Auxiliary Power Unit
technology demonstrator program
[SAE PAPER 801148] p0406 A81-34240

The status of the expendable gasifier program ---
gas generator for aircraft engine
[SAE PAPER 801151] p0406 A81-34242

Turbine engine design --- engineering for cost
effectiveness and propulsive efficiency
[AIAA PAPER 81-0915] p0408 A81-34362

Estimated service life of gas turbine engine
compressor blades
p0417 A81-36680

New technologies for compressors of aviation engines
p0452 A81-37656

Computer calculation of the characteristics of a
hybrid system for the cooling of gas turbine
blades
p0459 A81-39217

Investigation of the influence of the radial
nonuniformity of initial temperature and energy
losses on flow structure in a highly loaded
turbine stage
p0465 A81-40019

Investigation of the cooling of the turbine rotor
blade of a gas-turbine power system
p0465 A81-40020

Fluctuation of gas parameters behind the
combustion chamber of gas turbine engines
p0466 A81-40024

Prevention of corrosion and fatigue failure of
helicopter gas turbine compressors
p0469 A81-40107

Regenerative engine for helicopter application
[AHS 80-39] p0477 A81-40168

The requirements for efficient small turbine
engines taking up the challenge
[AHS 80-42] p0477 A81-40170

NDEC - A control concept for helicopter gas turbines
--- speed (N) based Digital Electronic Control
[AHS 80-44] p0477 A81-40171

High-temperature strength of alloys for gas
turbine engines --- Russian book
p0482 A81-40616

Principles of the reliability of gas turbine engines
--- Russian book
p0482 A81-40621

Exploratory development program to improve
combustor dome operating characteristics
[AIAA PAPER 81-1351] p0501 A81-40834

Improved combustor durability - Segmented approach
with advanced cooling techniques
[AIAA PAPER 81-1354] p0501 A81-40836

Composite fan exit guide vanes for high bypass
ratio gas turbine engines
[AIAA PAPER 81-1357] p0501 A81-40839

The influence of blade wakes on the performance of
combustor pre-diffusers
[AIAA PAPER 81-1387] p0502 A81-40856

Small gas-turbine combustor study - Fuel injector
evaluation
[AIAA PAPER 81-1388] p0502 A81-40857

Selected results from combustion research at the
Lewis Research Center
[AIAA PAPER 81-1392] p0503 A81-40859

Use of segmented mold process to produce large
superalloy engine castings
[AIAA PAPER 81-1404] p0503 A81-40861

Stress analysis of first turbine vane using a
3-dimensional model with non linear material
behavior subjected to transient temperatures
[AIAA PAPER 81-1437] p0504 A81-40873

Effect of oxygen addition of low pressure ignition
performance of aero gas turbine engine at
simulated altitude facility
[AIAA PAPER 81-1471] p0505 A81-40891

Reliability assurance of electronic engine controls
[AIAA PAPER 81-1499] p0506 A81-40911

Performance analysis of a family of planar pulse
generators
[AIAA PAPER 81-1590] p0507 A81-40965

Selection of turbine parameters for steam-hydrogen
engine schemes
p0509 A81-41028

Thermodynamic comparison of the efficiencies of
semiclosed- and open-loop air cooling systems of
gas turbine engines
p0509 A81-41029

Efficiency of cantilever compressor stator blades
p0509 A81-41041

An experimental study of heat transfer in rotating
slots and bends --- in gas turbine engines
p0509 A81-41049

From sponge to powder alternatives in titanium
processing
p0511 A81-41647

Engine life methodologies for conceptual design
[AIAA PAPER 81-1398] p0515 A81-42188

The use of engine operating experience in the
preliminary design of aircraft gas turbine
combustion systems
[AIAA PAPER 81-1399] p0515 A81-42189

Methodology for engine/aircraft selection with
life and utilization considerations
[AIAA PAPER 81-1401] p0515 A81-42190

Effect of oxygen-containing additives on the
antiwear properties of fuels for gas-turbine
aircraft engines
p0517 A81-42558

Application of the Semi-Loof thin shell element to
the analysis of aircraft engine structures
p0518 A81-42704

The effect of various factors on the vibration
characteristics of composite blades of gas
turbine engines
p0524 A81-42793

Possibility of development of an
electron-fractographic method for measuring
stress level produced by fatigue fracture of the
material
p0532 A81-43773

Engine life and usage methodologies for conceptual
design
[AIAA PAPER 81-1651] p0533 A81-43937

Autoignition characteristics of aircraft-type fuels
p0562 A81-44666

The predictability of turbine vane convection heat
transfer
[AIAA PAPER 81-1435] p0566 A81-45892

Computer-aided investigation of turbomachine
aerodynamics and aeroelasticity
p0613 A81-47962

On the numerical analysis of stall flutter in
turbine cascade
p0613 A81-47963

Model following control of gas turbine engines
p0624 A81-49900

Graphite/polyimide augmentor and nozzle components
--- of advanced military gas turbine engines
[AIAA PAPER 81-1358] p0625 A81-49976

Comparisons of four alternative powerplant types
for future general aviation aircraft
[NASA-TM-81584] p0028 N81-10067

An analysis of Air Force management of Turbine
Engine Monitoring Systems (TEMS)
[AD-A089365] p0028 N81-10070

Engine diagnostics program: CF6-50 engine
performance deterioration
[NASA-CR-159867] p0078 N81-12085

Effect of hole geometry and Electric-Discharge
Machining (EDM) on airflow rates through small
diameter holes in turbine blade material
[NASA-TP-1716] p0078 N81-12089

Effect of ambient conditions on the emissions from
a gas turbine combustor
[NASA-CR-3355] p0080 N81-12105
Metallurgical aspects of materials processing and
manufacturing for aero-engine components --- gas
turbine engines
[PNR-90019] p0084 N81-12209
An automatic isokinetic sampler for particulate
emissions from aircraft gas turbine engines
[AD-A090280] p0088 N81-12653
A comparison of the three methods used to obtain
acoustic measurements for the NASA Flight
Effects Program
[NASA-TM-81906] p0088 N81-12822
Progress in materials and structures at Lewis
Research Center
p0089 N81-12982
Power control for hot gas engines
[NASA-CASE-NPO-14220-1] p0133 N81-14318
Improved capabilities to detect incipient bearing
failures
[AD-A091687] p0134 N81-14325
Compressor configuration and design optimization
for the high reliability gas turbine
[DOE/ET-15425/T1] p0134 N81-14327
Gas turbine engines and transmissions for bus
demonstration programs
[COO-4867-C7] p0134 N81-14329
The measurement of aero gas turbine noise
[PNR-90032] p0138 N81-14795
Curved centerline air intake for a gas turbine
engine
[NASA-CASE-LEW-13201-1] p0143 N81-14999
Cost/benefit analysis of advanced materials
technologies for future aircraft turbine engines
[NASA-CR-165225] p0144 N81-15006
Compressor configuration and design optimization
for the high reliability gas turbine
[DOE/ET-15332/T1] p0145 N81-15414
Nonlinear analysis of squeeze film dampers applied
to gas turbine helicopter engines
[AD-A091905] p0196 N81-16062
Centrifugal compressors for small aero and
automotive gas turbine engines
p0220 N81-17467
Apparatus for sensor failure detection and
correction in a gas turbine engine control system
[NASA-CASE-LEW-12907-2] p0273 N81-19115
Development and fabrication of refractory silicon
carbide bodies, especially for gas turbine engines
--- by hot pressing
[BMFT-FB-T-79-137] p0275 N81-19128
Development of gas turbine components, using
silicon nitride --- forming techniques
[BMFT-FB-T-79-152] p0275 N81-19129
Automotive technology development program
[DOE/CS-0069/1] p0278 N81-19468
The rejuvenation of properties in turbine engine
hot section components by hot isostatic pressing
[AD-A097551] p0390 N81-23088
Fundamental heat transfer research for gas turbine
engines
[NASA-CP-2178] p0428 N81-24063
Structures, performance, benefit, cost study ---
gas turbine engines
[NASA-CR-165313] p0428 N81-24067
Internal coating of air-cooled gas turbine blades
[NASA-CR-165337] p0429 N81-24068
Experimental verification of turboblading
aeromechanics
p0432 N81-24092
Full annular combustor test facility for high
pressure/high temperature testing
p0432 N81-24097
The mechanical testing of compressors and turbines
for aircraft gas turbine engines
p0433 N81-24100
Prediction of future test needs, test facilities
and procedures
p0433 N81-24104
Reliability advancement for electronic engine
controllers, volume 1
[AD-A098623] p0444 N81-25087
Overview: NASA/AF/Navy Symposium on
Aeroelasticity of Turbine Engines
[NASA-CR-164419] p0444 N81-25089
Blade loss transient dynamics analysis, volume 1.
Task 1: Survey and perspective --- aircraft gas
turbine engines
[NASA-CR-165373-VOL-1] p0496 N81-27089
Coating for prevention of titanium combustion
[NASA-CR-165360] p0539 N81-28094
High temperature strain gage system for
application to turbine engine components
[AD-A104713] p0583 N81-30132
Solar Brayton engine/alternator set
p0588 N81-30529
First phase testing of solar thermal engine at
United Stirling
p0588 N81-30530
Non-heat pipe receiver/p-40 Stirling engine
p0588 N81-30531
Heat pipe solar receiver with thermal energy storage
p0588 N81-30532
Test results of the Chrysler upgraded automotive
gas turbine engine: Initial design
[NASA-TM-81660] p0588 N81-30562
An introduction to NASA's turbine engine hot
section technology (HOST) project
p0599 N81-31206
Dual-powered Gas Turbine/Electric (GT/E) computer
commuter rail cars: Test, evaluation and
economics
[PB81-211757] p0641 N81-34109
GAS TURBINES
New BBC high-efficiency gas turbines
p0017 A81-11797
Vector and scalar characteristics of opposing jets
discharging normally into a cross-stream
p0110 A81-17997
Semi-empirical correlations for gas turbine
emissions, ignition, and flame stabilization
p0171 A81-21505
Photoelastic investigation of stress distribution
around inclined cut-outs in gas-turbine
components subjected to in-plane and bending loads
p0295 A81-29091
Further studies of the influence of thermal
effects on the predicted acceleration of gas
turbines
[ASME PAPER 81-GT-21] p0311 A81-29938
The influence of premixed combustion flame
stabilizer geometry on flame stability and
emissions

Business aircraft turbofan technology progress in
the 1970's, challenges in the 1980's
[SAE PAPER 800601] p0061 A81-15326
A new high bypass fan for general aviation
[SAE PAPER 800602] p0061 A81-15327
Forward swept wings and business airplanes
[SAE PAPER 800605] p0061 A81-15328
Cabin pressure control systems for general
aviation aircraft
[SAE PAPER 800606] p0061 A81-15329
Business aircraft APU's --- Auxiliary Power Units
[SAE PAPER 800608] p0061 A81-15331
Improvements required in air traffic control to
meet increasing general aviation turbine powered
aircraft operations
[SAE PAPER 800614] p0062 A81-15335
Evolutions in business jet fuel systems as seen in
the Falcon Jet series
[SAE PAPER 800621] p0062 A81-15339
Future trends in automatic flight control systems
[SAE PAPER 800627] p0063 A81-15343
Development and certification of the Gulfstream III
p0100 A81-16587
The Grumman Aerospace and Gulfstream American
Gulfstream III case study in aircraft design ---
Book
p0101 A81-16720
A status report on NASA general aviation
stall/spin flight testing
p0122 A81-19471
An analytical approach to airfoil icing
[AIAA PAPER 81-0403] p0167 A81-20810
Icing tunnel tests of a glycol-exuding porous
leading edge ice protection system on a general
aviation airfoil
[AIAA PAPER 81-0405] p0168 A81-20837
Core noise measurements from a small, general
aviation turbofan engine
p0178 A81-22531
Empirical method for the prediction of business
executive jet cabin noise levels
p0224 A81-23844
Design for supercommuters
p0227 A81-24048
The Windecker Eagle - A new era in general
aviation aircraft manufacturing
p0240 A81-26747
The impact of active controls on general aviation
airplanes of the late 1980s
p0285 A81-28295
Electronic search and rescue aids
p0286 A81-28300
NASA research in aeropropulsion
[ASME PAPER 81-GT-96] p0314 A81-30003
Jet aircraft design
[AIAA PAPER 81-0912] p0362 A81-32930
The rise of air and space
p0366 A81-33718
Designing for aircraft structural crashworthiness
[AIAA PAPER 81-0803] p0367 A81-33882
Electronic displays and computerized NAV systems
for commuters and business aircraft
p0407 A81-34330
The art of single-engine aircraft design
[AIAA PAPER 81-0914] p0408 A81-34361
A description of the general aviation fixed wing
accident
p0408 A81-34696
Applications of dynamic stability parameters to
problems in aircraft dynamics
p0410 A81-35552
A geometrical study of the steady-state spin for a
typical low-wing general aviation aircraft
p0454 A81-38023
Light aviation in the United States - September 1980
--- French book
p0513 A81-41903
Strategies for aircraft interior noise reduction
in existing and future propeller aircraft
[SAE PAPER 810560] p0518 A81-42726
Summary of typical parameters that affect sound
transmission through general aviation aircraft
structures
[SAE PAPER 810562] p0518 A81-42728
Multiplexing in general aviation aircraft
[SAE PAPER 810570] p0519 A81-42735
The new aviation multiviscosity oil, SAE 20W-50
for general aviation
[SAE PAPER 810573] p0519 A81-42738
The state of the art of general aviation
autopilots - Now and in the future
[SAE PAPER 810582] p0520 A81-42744
Impact of advanced propeller technology on
aircraft/mission characteristics of several
general aviation aircraft
[SAE PAPER 810584] p0520 A81-42745
General aviation propeller noise reduction -
Penalties and potential
[SAE PAPER 810585] p0520 A81-42746
Noise and performance of general aviation aircraft
- A review of the MIT study
[SAE PAPER 810586] p0520 A81-42747
Development of a simple, self-contained flight
test data acquisition system
[SAE PAPER 810596] p0520 A81-42754
Analytical techniques for the analysis of
stall/spin flight test data
[SAE PAPER 810599] p0521 A81-42756
The effect of proplets and bi-blades on the
performance and noise of propellers
[SAE PAPER 810600] p0521 A81-42757
Low and high speed propellers for general aviation
- Performance potential and recent wind tunnel
test results
p0521 A81-42758
Propeller performance and design as influenced by
the installation
[SAE PAPER 810602] p0521 A81-42759
Investigation of a flight test method for the
measurement of propeller thrust
[SAE PAPER 810603] p0521 A81-42760
Crashworthy design concepts for airframe
structures of light aircraft
[SAE PAPER 810613] p0522 A81-42769
Aircraft subfloor response to crash loadings
[SAE PAPER 810614] p0522 A81-42770
Human factors aspects of emergency egress from a
business jet
[SAE PAPER 810617] p0523 A81-42772
Electronic fuel controls - Who needs them
[SAE PAPER 810619] p0523 A81-42774
Small turbofan engines - Their impact on general
aviation aircraft
[SAE PAPER 810622] p0523 A81-42776
An overview of general aviation propulsion
research programs at NASA-Lewis Research Center
[SAE PAPER 810624] p0523 A81-42778
Binocular Camera for cockpit visibility of general
aviation aircraft
[SAE PAPER 810628] p0524 A81-42780
Summary of high-lift and control surface research
on NASA general aviation airfoils
[SAE PAPER 810629] p0524 A81-42781
An assessment of advanced technologies for
application to general aviation
[SAE PAPER 810630] p0524 A81-42782
Flight test evaluation of advanced symbology for
general aviation approach to landing displays
[AIAA PAPER 81-1643] p0526 A81-43142
General aviation aircraft rear-seated occupant
protection - Shoulder restraints in rear seats
[AIAA PAPER 81-1669] p0534 A81-43944
Data analysis for aircraft parameter estimates
[AIAA PAPER 81-1864] p0560 A81-44561
Project Bandit - An economical, high performance
business aircraft for the 1990s
p0563 A81-44850
The design and development of a mixer compound
exhaust system for a quiet clean general
aviation turbofan
[AIAA PAPER 81-1494] p0566 A81-45893
Noise control at general aviation airports
p0569 A81-46366
Annual review of aircraft accident data, U.S.
General aviation calendar year 1978
[PB80-201916] p0024 N81-10028
Low-speed aerodynamic characteristics of a 13
percent thick medium speed airfoil designed for
general aviation applications
[NASA-TP-1498] p0071 N81-12015
Noise exposure of civil aircarrier airplanes
through the year 2000. Volume 1: Methods,
procedures, results
[EPA-550/9-79-313-1] p0087 N81-12684
Noise exposure of civil aircarrier airplanes
through the year 2000. Volume 2: Appendices A
through F
[EPA-550/9-70-313-2] p0087 N81-12685

Noise levels and data correction analysis for seven general aviation propeller aircraft [AD-A091292] p0096 N81-13717
An application of wake survey rakes to the experimental determination of thrust for a propeller driven aircraft [NASA-CR-163920] p0186 N81-15986
General aviation single pilot IFR autopilot study p0265 N81-19045
Light transport and general aviation aircraft icing research requirements [NASA-CR-165290] p0269 N81-19079
GASP- General Aviation Synthesis Program. Volume 1: Main program. Part 1: Theoretical development [NASA-CR-152303-VOL-1-PT-1] p0270 N81-19088

p0611 A81-47811
Cost-effective mechanical property characterization
p0612 A81-47813
The Lear Fan 2100
p0625 A81-49975
Development of advanced interceptor substructural material --- graphite epoxy missile structures
[AD-A090127] p0038 N81-11116
Fiber release from impacted graphite reinforced epoxy composites
[NASA-CR-163684] p0038 N81-11117
Microcracking in graphite-epoxy composites
[AD-A089894] p0038 N81-11118
Compatibility of aircraft operational fluids with a graphite/epoxy composite: Development of an exterior coating system and remover
[AD-A090049] p0039 N81-11120
Effect of service environment on composite materials
[AGARD-CP-288] p0039 N81-11128
Effect of various environmental conditions on polymer matrix composites
p0039 N81-11130
Predictability of moisture absorption in graphite/epoxy sandwich panels
p0039 N81-11131
Graphite-epoxy panel compression strength reduction due to local impact
p0040 N81-11139
Lightning protection considerations for graphite/epoxy aircraft structure
p0040 N81-11142
US Navy service experience with advanced composites --- in aircraft composite structures
p0041 N81-11149
Electromagnetic integration of composite structure in aircraft
p0200 N81-16159
Assessment of risk to Boeing commerical transport aircraft from carbon fibers --- fiber release from graphite/epxoy materials
[NASA-CR-159211] p0218 N81-17171
Fabrication and physical testing of graphite composite panels utilizing woven graphite fabric with current and advanced state-of-the-art resin systems
[NASA-CR-152292] p0218 N81-17175
An assessment of buffer strips for improving damage tolerance
p0247 N81-18009
Advanced composite aileron for L-1011 transport aircraft, task 1
[NASA-CR-145370] p0277 N81-19232
The 737 graphite composite flight spoiler flight service evaluation
[NASA-CR-159362] p0343 N81-21131
Manufacturing development of DC-10 advanced rudder
[NASA-CR-159060] p0494 N81-27077
Aeroelastic flutter and divergence of graphite/epoxy cantilevered plates with bending-torsion stiffness coupling
[AD-A101726] p0587 N81-30476

GRAPHITE-POLYIMIDE COMPOSITES
Development program for a graphite/PMR 15 polyimide duct for the F404 engine
p0181 A81-22647
Graphite polyimide fabrication research for supersonic cruise aircraft
p0182 A81-22665
Graphite/polyimide augmentor and nozzle components --- of advanced military gas turbine engines
[AIAA PAPER 81-1358] p0625 A81-49976
Design, fabrication and test of graphite/polyimide composite joints and attachments for advanced aerospace vehicles
[NASA-CR-159112] p0194 N81-16042

GRAPHS (CHARTS)
Experimental aerodynamic characteristics of two V/STOL fighter/attack aircraft configurations at Mach numbers from 0.4 to 1.4
[NASA-TM-81234] p0140 N81-14981
Charts for determining potential minimum sonic-boom overpressures for supersonic cruise

aircraft
[NASA-TP-1820] p0337 N81-21016
GRASSMANN ALGEBRA
U VECTOR SPACES
GRAVIMETRY
Gravimetric investigation of the particle number density distribution function in the high speed cascade wind tunnel for laser anemometry measurements
[ESA-TT-625] p0197 N81-16069
GRAVITATION
The NASA digital VGH program, early results --- structural design criteria
p0268 N81-19069
GRAVITATIONAL EFFECTS
The Global Positioning System versus gravity disturbance modeling in an inertial navigation system --- error reduction at aircraft altitude
[AIAA PAPER 81-0087] p0160 A81-20591
Physiological effects of high-G flight - Their impact on flight simulator design
[AIAA 81-0986] p0416 A81-36573
GRAVITY

GRIDS
Conforming element with out-element nodes
p0225 A81-23855
An investigation into grid patching techniques
p0137 N81-14708
GRINDING MACHINES
Computerized gear grinding system development
[AHS 80-48] p0476 A81-40163
GROOVES
NT V GROOVES
GROUND BASED CONTROL
NT AIR TRAFFIC CONTROL
NT RADAR APPROACH CONTROL
The role of aircraft separation assurance in the cockpit
p0115 A81-18092
An integrated transportation and operations comparison of space and ground based OTV's
[AIAA PAPER 81-1456] p0505 A81-40882
An integrated Omega/satellite radio navigation system
p0566 A81-45767
A supplementary EMC analysis of the proposed Airport Surface Detection Equipment (ASDE-3) radar
[AD-A092965] p0219 N81-17342
A flight investigation of the ultra-deep-stall descent and spin recovery characteristics of a 1/6 scale radiocontrolled model of the Piper PA38 Tomahawk
[NASA-CR-156871] p0343 N81-21084
Results of a feasibility study for determining the yaw angle of a landing aircraft
[AD-A099765] p0495 N81-27084
GROUND EFFECT
Assessment of ground effects on the propagation of aircraft noise: The T-38A flight experiment
[NASA-TP-1747] p0137 N81-14708
The velocity induced by the wake of a wind turbine in a shear layer, including ground effect
[FFA-TN-HU-2189-PT-3] p0141 N81-14985
Some wake-related operational limitations of rotorcraft
[NASA-TM-81920] p0186 N81-15985
An engineering method for estimating the induced lift on V/STOL aircraft hovering in and out of ground effect
[AD-A098509] p0441 N81-25069
The criticality of engine exhaust simulations on VSTOL model-measured ground effects
p0486 N81-26115
GROUND EFFECT (AERODYNAMICS)
Longitudinal motion of low-flying vehicles in nonlinear flowfields
p0009 A81-11626
Experiments on the validity of ground effect predictions for static noise testing of propeller aircraft
p0054 A81-13811
Determination of the effect of transverse cutouts on the hydrodynamic characteristics of a finite-span wing in the case of steady and unsteady motion near a wall
p0119 A81-19335
Experimental investigation of a right angle wing with partially separated flow with and without ground effects
[DGLR PAPER 80-111] p0120 A81-19397
Numerical calculation of jet-induced ground effect in VTOL
[AIAA PAPER 81-0015] p0157 A81-20539
Unsteady subsonic motion of a wing near a screen
p0225 A81-23889
Experimental investigations of the base pressures found on a bluff body in ground effect
p0234 A81-25379
Steady flow and static stability of airfoils in extreme ground effect
p0355 A81-31686
Flight investigations of a helicopter low airspeed estimation system based on measurement of control parameters
p0470 A81-40111
Vertical momentum of the fountain produced by multijet vertical impingement on a flat ground plane
p0529 A81-43396
Ground effects on aircraft noise for a wide-body commercial airplane
[AIAA PAPER 81-1988] p0620 A81-48638
Investigation of impingement region and wall jets formed by the interaction of high aspect ratio lift jets and a ground plane
[NASA-CR-152174] p0261 N81-19017
A theoretical investigation of ground effects on USB configurations
[NASA-CR-159005] p0262 N81-19021
Analytical study of STOL Aircraft in ground effect. Part 1: Nonplanar, nonlinear wing/jet lifting surface method
[NASA-CR-152087-PT-1] p0271 N81-19096
Analytical study of STOL Aircraft in ground effect. Part 2: Nonplanar, nonlinear method applicable to three dimensional jets of finite thickness
[NASA-CR-152088-PT-2] p0271 N81-19097
Effect of sweep and aspect ratio on the longitudinal aerodynamics of a spanloader wing in and out of ground effect --- wind tunnel tests
[NASA-TM-80199] p0627 N81-32119
GROUND EFFECT (COMMUNICATIONS)
Application of endfire arrays at contemporary glide-slope problem sites
p0360 A81-32695
GROUND EFFECT MACHINES
Noise control design problems on air cushion vehicles and surface effect ships
p0017 A81-11818
On the inter-relationship of the basic parameters and characteristics of various flight vehicles
p0236 A81-25694
Systems costing of hovercraft, hydrofoils and wing-in-ground effect machines. III
p0412 A81-35724
Soviet military air cushion vehicles - Mechanized amphibious assault
p0577 A81-46714
Operational characteristics comparison /ACV and SES/
[AIAA PAPER 81-2064] p0616 A81-48401
Heave instabilities of amphibious air cushion suspension systems
[UTIAS-246] p0144 N81-15156
GROUND HANDLING
Carrier system simplifies freight handling - A new technical concept for Lufthansa's Frankfurt facility
p0056 A81-14241
Recent progress toward predicting aircraft ground handling performance
p0260 N81-19060
GROUND SPEED
Longitudinal instability in braked landing gear
[ASME PAPER 80-WA/DSC-12] p0170 A81-21083
Airborne ground velocity determination by digital processing of electro-optical line sensor signals
p0350 A81-32496
Groundspeed/airspeed differences as a wind shear indicator and flight evaluation of a DME-derived

system to determine groundspeed
[AD-A097566] p0393 N81-23768
GROUND STATIONS
Omega station 10.2 kHz signal coverage prediction diagrams
p0512 A81-41760
Omega signal coverage prediction diagrams for 10.2 kHz. Volume 2: Individual station diagrams
[AD-A092742] p0192 N81-16031
GROUND SUPPORT EQUIPMENT
Characteristics of NAVSTAR user stations
p0121 A81-19425
Rebuild of aircraft ground support equipment
[SAE PAPER 801238] p0406 A81-34236
Aircraft ground mobility system for the F-16 aircraft
[AIAA PAPER 81-1735] p0536 A81-43960
Simulation model to evaluate maintenance strategies for large network of fielded systems
p0613 A81-48009
Airport Crash/Fire/Rescue CFR service cost and benefit analysis. Volume 2: Appendixes
[AD-A091155] p0094 N81-13069
Observing lightning from ground-based and airborne stations
p0136 N81-14566
Summary of flight tests of an airborne lighting locator system and comparison with ground-based measurements of precipitation and turbulence
p0266 N81-19048
Wallops severe storms measurement capability
p0266 N81-19049
GROUND SUPPORT SYSTEMS
Air Force Integration Support Facilities - Their total utility
p0320 A81-30240
GROUND TESTS
NT COLD FLOW TESTS
NT STATIC FIRING
Ground testing of aircraft antistatic protection
[ONERA, TP NO. 1980-126] p0015 A81-11674
SAFEST computer simulation of ejection seat performance
p0175 A81-22089
An approach to ramjet trajectory simulation test
p0292 A81-29065
Your next ground vibration test doesn't have to cost a million dollars
[AIAA 81-0529] p0303 A81-29450
The USAF Armament Division Structural Dynamics Lab
p0347 A81-30689
Aerodynamic trials with the linear motor-driven platform at the Toulouse Aeronautic Testing Center --- for aircraft acceleration and deceleration tests
[AAAF PAPER NT 80-41] p0369 A81-33943
Tests for inlet distortion in a two-spool turbojet engine on the ground test bed
p0419 A81-37340
Image stabilization techniques for long range reconnaissance camera
p0462 A81-39436
Experimental and analytical studies of a model helicopter rotor in hover
p0465 A81-39898
A compact installation for testing vectored-thrust engines
[AIAA PAPER 81-1592] p0508 A81-40967
In flight direct strike lightning research --- Using an F-106B Aircraft
p0259 N81-19005
Aerodynamic and acoustic behavior of a YF-12 inlet at static conditions
[NASA-CR-163106] p0342 N81-21079
Onboard and ground test of an autonomous navigation system based on terrain correlation
p0544 N81-29069
Methods of testing aircraft performance under icing conditions and ice tection systems
p0545 N81-29083
GROUND WIND
Wind shear systems implementation plan, benefit/cost study
[AD-A094168] p0253 N81-18055
GROUND-AIR-GROUND COMMUNICATIONS
Automating airborne company communications
p0112 A81-18064
Problems of voice communication in helicopters
p0151 A81-20074
Bilingual air traffic control in Canada
p0169 A81-20915
Potential effects of the introduction of the discrete address beacon system data link on air/ground information transfer problems
[NASA-CR-166165] p0373 N81-22037
Impact of low altitude coverage requirements on air-ground communications
[AD-A101642] p0586 N81-30338
Information transfer problems in the aviation system
[NASA-TP-1875] p0594 N81-31162
Dimensions of the information transfer problem --- human performance
p0594 N81-31163
Information transfer in the surface component of the system: Coordination problems in air traffic control
p0594 N81-31165
Information transfer between air traffic control and aircraft: Communication problems in flight operations
p0595 N81-31166
Information transfer during contingency operations: Emergency air-ground communications
p0595 N81-31168
The information transfer problem summary and comments
p0595 N81-31169

Aerodynamic effects of body slots on a guided projectile with cruciform surfaces
[AIAA PAPER 79-1658] p0066 A81-15887
Control, navigation, and guidance --- of aircraft
[AIAA PAPER 81-0859] p0362 A81-32910
GUIDANCE SENSORS
Simulation of a third-order vertical channel mechanization --- for airplane inertial navigation
p0322 A81-30290
Orientation of measurement sensors for optimum end-of-life performance
p0360 A81-32697
Flight test results for the F-8 digital fly-by-wire aircraft control sensor analytic redundancy management technique
[AIAA 81-1796] p0556 A81-44135
Low-speed wind-tunnel tests of two weathercocking sensors
[WSLA-0171-TN] p0136 N81-14575
Aircraft body-axis rotation measurement system
[NASA-CASE-FRC-11043-1] p0375 N81-22048
GUIDE VANES
NT JET VANES
Particle dynamics of inlet flow fields with swirling vanes
[AIAA PAPER 81-0001] p0156 A81-20526
Design, durability and low cost processing technology for composite fan exit guide vanes
p0182 A81-22664
Experimental determination of the circumferential drift of edge wakes of guide vanes in a turbine stage
p0466 A81-40022
Composite fan exit guide vanes for high bypass ratio gas turbine engines
[AIAA PAPER 81-1357] p0501 A81-40839
Effect of a part-span variable inlet guide vane on the performance of a high-bypass turbofan engine
[AIAA PAPER 81-1362] p0502 A81-40842
An experimental study on air intake performance for a rocket/ramjet engine
[AIAA PAPER 81-1488] p0506 A81-40906

GULF OF MEXICO
Proposed ATC system for the Gulf of Mexico: Helicopter operations development program
[AD-A089430] p0025 N81-10036
Production of LORAN-C reliability diagrams at the Defense Mapping Agency
[AD-A093749] p0206 N81-17028

Air-to-air gunnery systems test and evaluation
p0544 N81-29073
Gun harmonisation using the sector acoustic miss distance indicator
p0544 N81-29074
High impulse gun airborne demonstration. GAU-13/A weapon, feed system, gun drive and electronic controls
[AD-A101698] p0582 N81-30120
GUST ALLEVIATORS
OLGA, a gust alleviation system for improvement of passenger comfort of general aviation aircraft
p0008 A81-11620
Practical gust load alleviation and flutter suppression control laws based on a LQG methodology --- Linear Quadratic Gaussian
[AIAA PAPER 81-0021] p0158 A81-20544
Effect of gust load alleviation on fatigue and crack growth in ALCLAD 2024-T3
p0172 A81-21739
Active controls for civil aircraft
p0220 A81-24070
Gust response of rotary wing aircraft and its alleviation
p0465 A81-39900
Gust response of rotary wing and its alleviation
p0473 A81-40135
Helicopter gust alleviation - An optimal sampled-data approach
[AHS 80-31] p0476 A81-40161
Active controls for flutter suppression and gust alleviation in supersonic aircraft --- YF-17 flutter model
[NASA-CR-163934] p0216 N81-17097
Design for active and passive flutter suppression and gust alleviation
p0253 N81-18063
Some experiences with active control of aeroelastic response
[NASA-TM-83179] p0587 N81-30469
GUST LOADS
Wind shear detection from PCM-recorded MLS-flight data
p0015 A81-11675
Comparison of 2024 and 7475 aluminum alloy sheet for tension-critical aircraft structures
p0232 A81-24942
Analysis of the influence of atmospheric turbulence on alternating bending stress level in helicopter main rotor blades
p0236 A81-25690
Transonic flutter and gust-response tests and analyses of a wind-tunnel model of a torsion-free-wing fighter airplane
[AIAA 81-0650] p0307 A81-29503
Gust response of rotary wing aircraft and its alleviation
p0465 A81-39900
Active gust- and maneuver load control concepts, taking into account, as example, the Airbus A300. I - Design of a controller in the temporal domain for the alleviation of gust loads and the control of the effectiveness for stochastic gusts
[DGLR PAPER 81-065A] p0608 A81-47552
Active gust- and maneuver load reduction concepts, taking into account, as an example, the Airbus A300. II - Design of a controller for gust and maneuver load reduction in the frequency range
[DGLR PAPER 81-065B] p0608 A81-47553
Flight simulation environmental fatigue crack propagation in 2024-T3 and 7475-T761 aluminum
[NLR-MP-80003-U] p0086 N81-12477
Aviation meteorology research and development: A status report
p0135 N81-14557
The NASA digital VGH program, early results --- structural design criteria
p0268 N81-19069
Experimental and analytical study on the flutter and gust response characteristics of a torsion-free-wing airplane model --- in the Langley transonic dynamics tunnel
[NASA-CR-159283] p0340 N81-21059
Transonic flutter and gust-response tests and analyses of a wind-tunnel model of a torsion free wing airplane
[NASA-TM-81961] p0388 N81-23072
GUSTS
Modelling of gusts and wind shear for aircraft assessment and certification
p0528 A81-43376
The turbulent wind and its effect on flight

The rating of helicopter noise: Development of a proposed impulse correction
[NPL-AC-93] p0138 N81-14792

Preliminary airworthiness evaluation AH-1S (PROD) helicopter equipped with a substitute straight exhaust pipe
[AD-A092614] p0194 N81-16045

An investigation of the five point restraint
system for aviators
[AD-A093065] p0205 N81-16998
The evolution of the helicopter seat pan mounted
Personal Survival Pack (PSP)
p0205 N81-17016
Helicopter noise contour development techniques
and directivity analysis
[AD-A093426] p0221 N81-17851
Correlation of helicopter noise levels with
physical and performance characteristics
[AD-A093428] p0221 N81-17852
Definition of the problems associated with air
traffic control of closely spaced helicopter
traffic performing decelerated instrument
approaches
[AD-A094073] p0251 N81-18042
Helicopter external cargo sling apex fitting:
Development and testing
[AD-A093515] p0252 N81-18049
Preliminary airworthiness evaluation OH-58C
helicopter configured with a mast mounted sight
[AD-A094172] p0252 N81-18052
Helicopter icing review
[AD-A094175] p0252 N81-18053
Flight tests of IFR landing approach systems for
helicopters
p0265 N81-19042
Pneumatic boot for helicopter rotor deicing
p0267 N81-19059
Helicopter external load acquisition technology
investigation
[AD-A094672] p0272 N81-19106
An investigation of drag associated with the
upswept rear fuselage of a helicopter
[BU-257] p0330 N81-20043
Minimum operational performance standards for
airborne radar approach and beacon systems for
helicopters
[RTCA/DO-172] p0336 N81-20322
Fluid mechanics mechanisms in the stall process of
helicopters
[NASA-TM-81956] p0338 N81-21027
Study of pilot visual information requirements for
Navy vertical take-off and landing capability
development
[AD-A096074] p0341 N81-21068
Low-range airspeed sensors
[AD-A096359] p0342 N81-21076
Subjective field study of response to impulsive
helicopter noise
[NASA-TP-1833] p0345 N81-21873
Kinematic properties of the helicopter in
coordinated turns
[NASA-TP-1773] p0374 N81-22039
Component research for future propulsion systems
[NASA-TM-82613] p0376 N81-22055
Structures and Materials Panel
[AD-A089019] p0378 N81-22420
An analysis of thermal balance in the cooled cabin
of a Sea King Helicopter
[AD-A097199] p0389 N81-23077
A study of the effect of terrain on helicopter
noise propagation by acoustical modeling
[AD-A097626] p0394 N81-23864
Helicopter transmission qualification procedures
and tests
p0433 N81-24101
Advanced Scout Helicopter (ASH) fly-by-wire
control system preliminary design. Volume 1:
System design and analysis
[AD-A098155] p0434 N81-24108
Pitch-flap-phase coupling. A preliminary analysis
of an evolving concept of helicopter
autostabilization
[BU-242] p0434 N81-24109
Temporal integration in low frequency auditory
detection
[AD-A098161] p0438 N81-24862
Vibration in a Helmet Mounted Sight (HMS) using
mechanical linkage
[AD-A098533] p0442 N81-25071
Validation of helicopter noise prediction techniques
[NASA-CR-165715] p0447 N81-25768
Helicopter Fatigue Life Assessment
[AGARD-CP-297] p0487 N81-26126
State of the art and statistical aspects of
helicopter fatigue substantiation procedures
p0487 N81-26127
Synopsis of Specialists' Meeting on Helicopter
Fatigue Methodology
p0487 N81-26129
Application of damage tolerance concepts for the
helicopters
p0487 N81-26130
Fatigue analysis of composite materials using the
fail-safe concept
p0487 N81-26131
Helicopter Fatigue: A civil view
p0488 N81-26134
Helicopter component fatigue life determination
p0488 N81-26135
Fatigue tests on the total structure of the
Gazelle SA 341 helicopter
p0488 N81-26136
Helicopter gearbox testing
p0488 N81-26137
Fatigue testing of helicopter gearboxes
p0488 N81-26138
Fatigue testing of composite rotor blades
p0489 N81-26140
Development of standardised fatigue test load
histories for helicopter rotors: Basic
consideration and definition of Helix and Felix
p0489 N81-26141
Fatigue test program and test results
p0489 N81-26142
Fatigue behavior of helicopter dynamic components
under constant amplitude and spectrum loading
p0489 N81-26143
ATC simulation of helicopter IFR approaches into
major terminal areas using RNAV, MLS, and CDTI
[NASA-TM-81301] p0492 N81-27061
State of the art and statistical aspects of
helicopter fatigue substantiation procedures
[NLR-MP-80025-U] p0496 N81-27087
The background and bases for the proposed military
standard on acoustical noise limits in helicopters
[AD-A099814] p0500 N81-27890
Development for helicopter flight in icing
conditions
p0545 N81-29082
AH-1S(Prod) airworthiness and flight
characteristics for instrument flight
[AD-A100946] p0548 N81-29121
Testing and evaluation of a
stall-flutter-suppression system for helicopter
rotors using individual-blade-control
[NASA-CR-166233] p0549 N81-29135
Helicopter noise exposure level data: Variations
with test target. Indicated airspeed, distance,
main rotor RPM and takeoff power
[AD-A100691] p0552 N81-29661
Application of damage tolerance concepts for MBB
helicopters --- mechanical properties
[MBB-UD-309/80-OE] p0580 N81-30105
AH-1 lightweight airborne launcher jettison
evaluation
[AD-A101461] p0582 N81-30119
Developement of antiresonance force isolators for
helicopter vibration reduction
[MBB-UD-305/80-OE] p0582 N81-30123
Helicopter technologies of the future --- weight
reduction
[MBB-UD-314/80-OE] p0583 N81-30125
Helicopter propulsion system reliability and
engine monitoring assessments
p0599 N81-31213
Two-dimensional dynamic stall as simulated in a
varying freestream
[NASA-CR-164829] p0629 N81-32154
Controls and displays for all-weather operation of
helicopters
p0633 N81-33145
The impact of helicopter flight mechanics on
mission performance
p0633 N81-33148
Mission potential of derivatives of the XV-15 tilt
rotor research aircraft
p0634 N81-33150
Advancing blade concept helicopter mission
capabilities
p0634 N81-33151
Helicopter noise analysis: Round-robin test
[AD-A103724] p0641 N81-33948
HELIPORTS
Study of heliport airspace and real estate
requirements

[AD-A091156] p0095 N81-13072
Development of a heliport classification method and an analysis of heliport real estate and airspace requirements
[AD-A102521] p0630 N81-32158

HELIUM-NEON LASERS
Acousto-optic deflection applied to a laser tracker
p0463 A81-39526
The Dalembertometer
[ISL-CO-220/79] p0133 N81-14292

HELMET MOUNTED DISPLAYS
Flight evaluation of a helmet mounted LED matrix display in a Lynx helicopter
p0472 A81-40129
An equipment for testing and measuring a Helmet Mounted Sight and Display system with a coupled TV-camera in the flight simulator for research of the DFVLR
[DFVLR-MITT-80-04] p0092 N81-13052
Equipment for testing and measuring a "helmet mounted sight and display" system with a coupled movable television camera in the flight-simulator for research of the DFVLR
[DFVLR-MITT-80-04] p0129 N81-13960
Helmet mounted displays: Design considerations
p0213 N81-17073

HELMETS
The intelligibility of speech presented over the telephones of the Mk 4 flying helmet --- earphones
[RAE-TM-FS-313] p0084 N81-12320
Vibration in a Helmet Mounted Sight (HMS) using mechanical linkage
[AD-A098533] p0442 N81-25071
An active noise reduction system for aircrew helmets
p0604 N81-31470
Flying helmet attenuation, and the measurement, with particular reference to the Mk 4 helmet
p0604 N81-31473
Procedural handbook for escape system/accident investigation helmet usage aspects, including failure analysis
[AD-A102803] p0628 N81-32130

HEMISPHERE CYLINDER BODIES
Calculation of viscous, sonic flow over hemisphere-cylinder at 19 deg incidence - The capturing of nose vortices
[AIAA PAPER 81-0189] p0162 A81-20661

HERCULES AIRCRAFT
U C-130 AIRCRAFT

HEURISTIC METHODS
Application of scheduling heuristics on the aircraft maintenance depot
[AD-A094815] p0261 N81-19015

HFB-320 AIRCRAFT
System identification of the longitudinal motion of the DFVLR HFB 320 research aircraft with particular consideration of control surface effectiveness
[DFVLR-MITT-79-16] p0130 N81-13971

HHX HELICOPTER
U H-53 HELICOPTER

HIGH ACCELERATION
Physiological effects of high-G flight - Their impact on flight simulator design
[AIAA 81-0986] p0416 A81-36573

HIGH ALTITUDE
Conflict monitoring analysis of parallel route spacing in the high altitude airspace, volume 2
[AD-A094152] p0250 N81-18038
Conflict monitoring analysis of parallel route spacing in the high altitude conus airspace, volume 1
[AD-A094071] p0250 N81-18041
A study of high-altitude manned research aircraft employing strut-braced wings of high-aspect-ratio
[NASA-CR-159262] p0333 N81-20067

HIGH ALTITUDE ENVIRONMENTS
Characterizing cross-track error distributions for continental jet routes
p0174 A81-21969

HIGH ALTITUDE FLIGHT
U HIGH ALTITUDE

HIGH ALTITUDE PRESSURE
Effect of oxygen addition of low pressure ignition performance of aero gas turbine engine at simulated altitude facility
[AIAA PAPER 81-1471] p0505 A81-40891

HIGH ALTITUDE TESTS
A review of the installation, performance and economic aspects of a high altitude facility for small gas turbines
[SAE PAPER 801121] p0396 A81-34157

HIGH ASPECT RATIO
Experimental investigation of a high-aspect-ratio supersonic inlet
[AIAA PAPER 81-1397] p0515 A81-42107
Preliminary design characteristics of a subsonic business jet concept employing an aspect ratio 25 strut braced wing
[NASA-CR-159361] p0032 N81-11013
Rotary balance data for a single engine general aviation design having a high aspect-ratio canard for an angle-of-attack range of 30 deg to 90 deg
[NASA-CR-3170] p0090 N81-13022
Investigation of powered nacelles on a high aspect ratio NASA supercritical wing, phase 2 --- Langley 8 Foot Transonic Pressure Tunnel
p0260 N81-19008
The EET Horizontal Tails Investigation and the EET Lateral Controls Investigation --- Langley 8-Foot Transonic Pressure Tunnel
p0260 N81-19009
Investigation of impingement region and wall jets formed by the interaction of high aspect ratio lift jets and a ground plane
[NASA-CR-152174] p0261 N81-19017
A study of high-altitude manned research aircraft employing strut-braced wings of high-aspect-ratio
[NASA-CR-159262] p0333 N81-20067

HIGH ASPECT RATIO WINGS
U SLENDER WINGS

HIGH ENERGY FUELS
Proceedings of the 4th Workshop on Catalytic Combustion
[PB81-176067] p0588 N81-30700

HIGH ENERGY INTERACTIONS
The emulsion chamber experiment on super-sonic Concorde /Echos/
p0019 A81-12476

HIGH FREQUENCIES
High frequency angular vibration measurements in vehicles
[AAS PAPER 81-024] p0361 A81-32886
Radio direction finding on high frequency short duration signals
[AD-A092136] p0192 N81-16029

HIGH INTENSITY LASERS
U HIGH POWER LASERS

HIGH LEVEL LANGUAGES
High-level languages in affordable aircraft simulators
p0154 A81-20418
The BQM-74C target as a flying computer - Its language and its peripherals
p0179 A81-22611

HIGH MELTING COMPOUNDS
U REFRACTORY MATERIALS

HIGH PASS FILTERS
Sample data effects of high-pass filters
[NASA-TP-1797] p0193 N81-16040

HIGH POLYMERS
Drag reduction - Jet breakup correlation with kerosene-based additives
p0225 A81-23923

HIGH POWER LASERS
Flow control for an airborne laser turret
[AIAA PAPER 81-1637] p0525 A81-43137
Compact and highly sensitive fluorescence lidar for oceanographic measurements
p0623 A81-49370

HIGH PRESSURE
High pressure fuel pumps - Their design and evolution /The 13th J. D. North Memorial Lecture/
p0513 A81-42052
JT8D-15/17 high pressure turbine root discharged blade performance improvement --- engine design
[NASA-CR-165220] p0214 N81-17080
Investigation of air solubility in jet A fuel at high pressures
[NASA-CR-3422] p0378 N81-22130
Energy efficient engine, high-pressure turbine cooling model technology report
[NASA-CR-165374] p0496 N81-27093

HIGH RESOLUTION
Infrared airborne radar
p0617 A81-48566

HIGH SPEED
Extension of ejection seat capability for high speed conditions
p0176 A81-22097
Some problems of modeling high-speed aerodynamics --- in wind tunnels and tubes
p0237 A81-26118
Advancing blade concept /ABC/ high speed development
p0478 A81-40182
High speed exit taxiways
[AD-A098178] p0435 N81-24118
High speed multiplex bus protocol study

HOVERING
Dynamic analysis of a free-tip rotor
[AIAA 81-0618] p0305 A81-29479
Velocity command/position hold - A new flight control concept for hovering VTOL aircraft
[SAE PAPER 801206] p0403 A81-34218

Dynamics and control of a Heavy Lift Airship in cross wind hover
[AIAA 81-1334] p0456 A81-38539
Experimental and analytical studies of a model helicopter rotor in hover
p0468 A81-40097
Hover performance methodology at Bell Helicopter Textron
[AHS 80-3] p0473 A81-40138
The aerodynamic influences of rotor blade airfoils, twist, taper and solidity on hover and forward flight performance
p0572 A81-46607
Experimental and analytical studies of a model helicopter rotor in hover
[AD-A089780] p0035 N81-11033
Heave instabilities of amphibious air cushion suspension systems
[UTIAS-246] p0144 N81-15156
An extension of the local momentum theory to a distorted wake model of a hovering rotor
[NASA-TM-81258] p0329 N81-20030
Application of variable structure system theory to aircraft flight control --- AV-8A and the Augmentor Wing Jet STOL Research Aircraft
[NASA-CR-164321] p0391 N81-23093
Fountain-jet turbulence
[AD-A098098] p0423 N81-24028
An engineering method for estimating the induced lift on V/STOL aircraft hovering in and out of ground effect
[AD-A098509] p0441 N81-25069
Validation study of the V/STOL aerodynamics and stability and control manual
[AD-A099236] p0486 N81-26119
The effects of various fidelity factors on simulated helicopter hover
[AD-A102028] p0601 N81-31232
HOVERING STABILITY
Prediction of tilt rotor outwash
[AIAA PAPER 81-0013] p0157 A81-20537
The effect of the atmospheric turbulence on the rotor blade flap-leadlag motion stability in hovering
[AIAA 81-0610] p0304 A81-29472
Experimental and analytical studies of a model helicopter rotor in hover
p0465 A81-39898
Co-axial rotor aerodynamics in hover
p0465 A81-39899
Stability of nonuniform rotor blades in hover using a mixed formulation
p0467 A81-40088
Aerodynamic study of a hovering rotor
p0468 A81-40098
An empirical prediction method for helicopter performance in low speed level flight and in vertical and forward flight climbs
p0471 A81-40118
Flight tests and statistical data analysis for flying qualities investigations
p0471 A81-40121
Trailing edge noise from hovering rotors
[AHS 80-60] p0479 A81-40184
Equivalent system analysis of translation rate command systems for hover and low speed flight
[AIAA PAPER 81-1858] p0560 A81-44557
Stability of nonuniform rotor blades in hover using a mixed formulation
[AD-A090756] p0076 N81-12071
A pure direct force/moment control for coaxial counterrotating rotors
p0144 N81-15007
Parameter identification of a hingeless rotor helicopter in flight conditions with increased instability
[MBB-UD-307/80-OE] p0504 N81-30140
Design of a slot height distribution for increased hover control power on a circulation control rotor
[AD-A103535] p0637 N81-33194

HUMAN FACTORS ENGINEERING
A theoretical and practical design investigation of the future military cockpit
p0010 A81-11631
Midair collisions - The accidents, the systems, and the Realpolitik
p0052 A81-13413
Human error in ATC system operations
p0052 A81-13414
The measurement of the air traffic controller
p0053 A81-13415
Evaluation of the potential format and content of a cockpit display of traffic information
p0053 A81-13419
757/767 design considerations for improved productivity
p0100 A81-16584
Air traffic control problems - A pilot's view
p0169 A81-20914
High 'Q' ejection protection device
p0175 A81-22093
Tailoring software logic to the needs of the pilot - A software designer's nightmare
p0325 A81-30335
KC-135 modernization program --- cockpit avionics subsystems integration for pilot workload reduction
p0325 A81-30337
Integration of navigational information in aircraft
p0407 A81-34336
Physiological effects of high-G flight - Their impact on flight simulator design
[AIAA 81-0986] p0416 A81-36573
Multifunctional color displays for cockpits
p0451 A81-37646
Recommendations for the NASA Avionics program for the 1980's
p0517 A81-42436
Human factors aspects of emergency egress from a business jet
[SAE PAPER 810617] p0523 A81-42772
Motion-base simulator results of advanced supersonic transport handling qualities with active controls
[AIAA 81-1819] p0555 A81-44109
IFFC flying qualities simulation --- Integrated Flight/Fire Control

[AIAA 81-1821] p0555 A81-44111
Investigation of the physical working environment
for cabin attendants within Scandinavian
Airlines System /SAS/ --- noise conditions and
aircraft vibration
p0568 A81-46357

Electronic Master Monitor and Advisory Display
System
p0573 A81-46615

The impact on helicopter cockpits of integrated
advanced flight controls, avionics and optics
p0574 A81-46624

Human Factors of Flight-deck Automation:
NASA/Industry Workshop
[NASA-TM-81260] p0191 N81-16022
Summary of aviation safety program resumes. Cabin
safety
[AD-A091938] p0192 N81-16027
A preliminary human factors flight assessment of a
Marconi automatic map
[AD-A092585] p0193 N81-16036
The effects of the direction of control loading on
a one-dimensional tracking task
[AD-A092459] p0197 N81-16067
An investigation of the five point restraint
system for aviators
[AD-A093065] p0205 N81-16998
Ergonometric study of ejection through a breakable
canopy
p0205 N81-17011

Operational problems associated with head-up
displays during instrument flight
[AD-A092992] p0210 N81-17058
Advancement on visualization techniques
[AGARD-AG-255] p0211 N81-17063
The electro-optical display/visual system
interface: Human factors considerations
p0212 N81-17066

The influence of visual requirements on the design
of military cockpits
p0213 N81-17075

Evaluation of AFIT/F-16 restraint concepts in the
+ or - 2Gy environment
[AD-A094323] p0249 N81-18034
Evaluation of factors unique to multifunction
controls/displays devices
[AD-A094227] p0258 N81-18733
A head-up display format for transport aircraft
approach and landing
p0265 N81-19043

How a pilot looks at altitude
p0265 N81-19047

The 1980 Aircraft Safety and Operating Problems,
part 2
[NASA-CP-2170-PT-2] p0267 N81-19056
Flight evaluation of the concept of the stage A
Peripheral Vision Horizon Device (PVHD) using
the CH 135 aircraft of 403 Squadron - CFB Gagetown
[AD-A096870] p0375 N81-22050
MPES negative G restraint strap design options
[AD-A098030] p0424 N81-24037
Continued research on selected parameters to
minimize community annoyance from airplane noise
[NASA-CR-164299] p0438 N81-24602
Acoustic facilities for human factors research at
NASA Langley Research Center: Description and
operational capabilities
[NASA-TM-81975] p0446 N81-25765
Special Aviation Fire and Explosion Reduction
(SAFER) Advisory Committee, volume 2B

Advanced flight simulator: Utilization in A-10
conversion and air-to-surface attack training
[AD-A094608] p0254 N81-18066
ATC contingency operations in the en-route flight
regime
[NASA-CR-166231] p0546 N81-29110
Information transfer problems in the aviation system
[NASA-TP-1875] p0594 N81-31162
Dimensions of the information transfer problem ---
human performance
p0594 N81-31163

HUMAN REACTIONS
Community response to noise from a general
aviation airport
p0017 A81-11821

A program to support the full utilization of data
from existing social surveys of environmental
noise
p0570 A81-46374

Survey population response to airplane noise, part 1
[NASA-TM-75790] p0031 N81-10576
A guidance document on airport noise control
[AD-A092228] p0202 N81-16629
The annoyance caused by airplane noise in the
vicinity of Orly Airport and the reaction of
neighboring residents
[NASA-TM-76575] p0379 N81-22590
An airport community noise-impact assessment model
[NASA-TM-80198] p0393 N81-23713
The speed of response to synthesized voice messages
p0603 N81-31456

Voice warning systems: Some experimental evidence
concerning application
p0603 N81-31458

HUMAN TOLERANCES
Aircraft annoyance evaluations using field and
laboratory simulation techniques
[UTIAS-248] p0146 N81-15580
Airport noise impact reduction through operations
[NASA-TM-81970] p0438 N81-24855
Effect of aircraft noise on the equilibrium of
airport residents: Longitudinal study around
Roissy, phase 3
[NASA-TM-75906] p0499 N81-27692
HUMIDITY
R.A.N. Sea King cabin environment survey. Part 2:
Measurement of temperature and humidty
[AD-A096329] p0341 N81-21065
HUSTLER AIRCRAFT
U B-58 AIRCRAFT
HYBRID COMPUTERS
Function generation techniques --- in real time
hybrid simulations
p0614 A81-48329

An automated procedure for developing hybrid
computer simulations of turbofan engines
[NASA-TM-81605] p0044 N81-11688
A digital-analog hybrid system and its application
to the automatic flight control system
simulation research
[NASA-TM-76457] p0377 N81-22060
Processing of AIDS flight recorder data for a
quick look with the aid of a hybrid computer
system
p0384 N81-23023

HYBRID NAVIGATION SYSTEMS
Principle for the design of hybrid control systems
for passenger transport systems
p0107 A81-17577

Development of an astro-inertial hybrid navigation
system and a star tracker
p0420 A81-37343

Evaluation of a hybrid navigation system with
laser gyroscopes: SEXTAN
p0485 N81-26102

HYBRID PROPULSION
Hydrogen fueled catalytic combustion for low
thrust expendable turbojet engine
[AIAA PAPER 81-1715] p0527 A81-43165
HYBRID STRUCTURES
Quasi-hybrid airships
[AIAA 81-1333] p0456 A81-38530
Low cost start-up for rigid-pressure airship
[AIAA 81-1337] p0457 A81-38581
Superhybrid composite blade impact studies
[NASA-TM-81597] p0043 N81-11612

HYDRAULIC ACTUATORS
U ACTUATORS
U HYDRAULIC EQUIPMENT
HYDRAULIC CONTROL
The use of power-adaptive and power-reversible flight control actuation systems to achieve hydraulic power and system weight savings
[SAE PAPER 801190] p0401 A81-34201
Evolution of an optical control system for aircraft hydraulics

HYPERSONIC AIRCRAFT
A survey of heating and turbulent boundary layer characteristics of several hypersonic research aircraft configurations
[AIAA PAPER 81-1145] p0459 A81-39134
Design and fabrication of a stringer stiffened discrete-tube actively cooled panel for a hypersonic aircraft
[NASA-CR-3403] p0279 N81-19484
Aerodynamic characteristics of a hypersonic cruise aircraft concept with wing-mounted propulsion systems at Mach numbers of 2.96, 3.96 and 4.63 --- Langley unitary plan wind tunnel tests
[NASA-TM-81937] p0329 N81-20025
HYPERSONIC BOUNDARY LAYER
Hypersonic gas flow over a delta wing p0123 A81-19632

Correlation of artificially induced boundary-layer transition data at hypersonic speeds p0285 A81-27911

HYPERSONIC FLOW
Determination of the vorticity of a small-aspect-ratio wing in hypersonic flow p0054 A81-13544

A numerical simulation of hypersonic viscous flow over arbitrary geometries at angle of attack
[AIAA PAPER 81-0050] p0158 A81-20566
The problem of the unsteady hypersonic flow past a plane profile p0231 A81-24730

Characteristics of nonequilibrium flow with ionization in a region perturbed by a thin blunt body p0231 A81-24732

Some aerodynamic properties of cones in viscous supersonic flow p0237 A81-26119

On the theory of a wing with small aspect ratio in a hypersonic flow p0309 A81-29860

Determination of the vorticity on a wing of small aspect ratio in a hypersonic stream p0411 A81-35668

Accuracy and application of a second-order theory for three-dimensional supersonic and low hypersonic unsteady flows aroung a thin wing p0419 A81-37335

An investigation of support-interference effects
[NAL-TR-622] p0141 N81-14984
HYPERSONIC SHOCK
Analysis of calculated three-dimensional inviscid flow fields with embedded shock waves (presentation of a field solution), part 1
[ESA-TT-558] p0022 N81-10017
HYPERSONIC VEHICLES
NT HYPERSONIC AIRCRAFT
A computer-aided design system geared toward conceptual design in a research environment --- for hypersonic vehicles
[AIAA PAPER 81-0372] p0166 A81-20789
A comparison of laboratory measured temperatures with predictions for a spar/skin type aircraft structure
[NASA-TM-81359] p0387 N81-23067
HYPERSONIC WIND TUNNELS
NT CASCADE WIND TUNNELS
Analysis and design of a ceramic nozzle insert for the Langley 8-foot high temperature structures tunnel p0060 A81-14996

Some problems of modeling high-speed aerodynamics --- in wind tunnels and tubes p0237 A81-26118

Ceramic and coating applications in the hostile environment of a high temperature hypersonic wind tunnel --- Langley 8-foot high temperature structures tunnel
[NASA-TM-81931] p0254 N81-18199
A rectangular rod-wall sound shield
[NASA-CASE-LAR-12883-1] p0550 N81-29138
HYPERVELOCITY WIND TUNNELS
NT CASCADE WIND TUNNELS
HYSTERESIS
Wind tunnel investigation of the aerodynamic hysteresis phenomenon on the F-4 aircraft and its effects on aircraft motion
[AD-A089851] p0033 N81-11016

I

ICE ENVIRONMENTS
Seat pack for fighter aircraft operating on the NATO Northern Flank p0205 N81-17010

ICE FORMATION
NT CLOUD GLACIATION
An analytical approach to airfoil icing
[AIAA PAPER 81-0403] p0167 A81-20810
Simulated aircraft takeoff performance with frosted wings
[AIAA PAPER 81-0404] p0167 A81-20811
United States Army helicopter icing qualification 1980
[AIAA PAPER 81-0406] p0167 A81-20812
The problem of hoar-frost formation in aircraft fuel tanks p0319 A81-30159

Measurement of natural aircraft icing conditions
[AIAA PAPER 81-1646] p0526 A81-43143
Aircraft icing instrumentation: Unfilled needs --- rotary wing aircraft p0135 N81-14560

Helicopter icing review
[AD-A094175] p0252 N81-18053
Survey of aircraft icing simulation test facilities in North America
[NASA-TM-81707] p0269 N81-19078
Light transport and general aviation aircraft icing research requirements

Doppler aided low accuracy strapdown inertial navigation system
[AIAA 81-1798]
p0555 A81-44101
Aircraft instruments and measuring systems --- Russian book
p0564 A81-45600
Origins of inertial navigation
p0567 A81-46276
Gyrocompasses. Citations from the International Aerospace Abstracts data base
[NASA-CR-163675]
p0028 N81-10065
Flight test investigation of LORAN-C for en route navigation in the Gulf of Mexico
[AD-A091637]
p0128 N81-13945
A single gimbal/strapdown inertial navigation system for use on spin stabilized flight test vehicles
[SAND-80-2479C]
p0193 N81-16037
Estimation and statistical averaging applied to redundant strapped down inertial sensors for navigation and flight control
[AD-A094465]
p0276 N81-19133
Flight test results of an advanced development model Ring Laser Gyro Navigator (RLGN)
p0485 N81-26103
New Navy programs for development of integrated inertial sensors
p0485 N81-26108

INERTIAL REFERENCE SYSTEMS
Failure detection and isolation for tactical aircraft using the generalized likelihood test
p0321 A81-30261

INFINITE SPAN WINGS
Laminar boundary layer on swept-back wings of infinite span at an angle of attack
p0107 A81-17656

INFLATABLE DEVICES
U INFLATABLE STRUCTURES

INFLATABLE STRUCTURES
NT TETHERED BALLOONS
An inflatable seat for aircraft passengers
p0175 A81-22091
Effect of thermal radiation on the integrity pressurized aircraft evacuation slides and slide materials
[AD-A098179]
p0424 N81-24039
Development of retardation and automatic flotation system (R.A.F.T.)
[AD-A096828]
p0439 N81-25047

INFLUENCE COEFFICIENT
The balancing of flexible rotors - Theoretical relation of each balancing method and accuracies
p0228 A81-24088

INFORMATION FLOW
Dimensions of the information transfer problem --- human performance
p0594 N81-31163

INFORMATION MANAGEMENT
Integration of navigational information in aircraft
p0407 A81-34336

INFORMATION RETRIEVAL
Arts 2 enhancement design alternative study
[AD-A096276]
p0339 N81-21049

INFORMATION SYSTEMS
NT MANAGEMENT INFORMATION SYSTEMS
A concept for dynamic control of RPV information system parameters
p0049 A81-12796
Advanced avionic systems for multi-mission applications
p0321 A81-30258
Contention information transfer systems analysis
p0322 A81-30274
Synergistic benefits of fully integrating JTIDS and GPS --- Joint Tactical Information Distribution System and Global Positioning System
p0323 A81-30311
A Single Processor Synchronous Executive derived from the DAIS executive --- Digital Avionics Information System
p0324 A81-30326
The RLU - An advanced remote terminal for avionic systems
p0327 A81-30358
Weights information systems using minicomputers
[SAWE PAPER 1347]
p0353 A81-31305
Communications support for National Flight Data Center information system
[AD-A093095]
p0219 N81-17327

The accident/injury matrix - A tool for aircraft accident investigation p0018 A81-12241

Aircraft accident reports. Brief format, US civil aviation: Issue no. 11, 1979 accidents p0075 N81-12053
[NTSB-BA-80-8]
Briefs of accidents involving commuter air carriers and on-demand air taxi operations, U.S. General Aviation 1978 p0141 N81-14987
[PB81-101701]
INLET FLOW
A study of the air inlet efficiency of a combat aircraft concept with dorsal inlet p0008 A81-11615

One-dimensional considerations concerning the stability behavior of inlet diffusers for supersonic aircraft --- German thesis p0107 A81-17548

Inlet flow distortion in turbomachinery
[ASME PAPER 80-GT-20] p0109 A81-17952
Conditions of generation and methods of damping the inlet vortex of a turbojet engine p0121 A81-19442

Particle dynamics of inlet flow fields with swirling vanes
[AIAA PAPER 81-0001] p0156 A81-20526
Body-fitted 3-D full-potential flow analysis of complex ducts and inlets
[AIAA PAPER 81-0002] p0156 A81-20527
An approach to ramjet trajectory simulation test p0292 A81-29065

Evaluation of blade element performance of compressor rotor blade cascades in transonic and low supersonic flow range p0296 A81-29102

Three dimensional flow in annular diffusers with two vortex distributions at entry p0297 A81-29112

Flow separation in inlets at incidence angles p0297 A81-29114

Development and validation of computational flow analysis for design of inlets and nozzles p0298 A81-29117

Feasibility of a rotor flight-dynamics model with first-order cyclic inflow and multiblade modes
[AIAA 81-0611] p0304 A81-29473
Experimental investigation of a low hub-to-tip ratio single stage transonic fan
[ASME PAPER 81-GT-209] p0318 A81-30098
Cooled radial in-flow turbines for advanced gas turbine engines
[ASME PAPER 81-GT-213] p0318 A81-30102
Tests for inlet distortion in a two-spool turbojet engine on the ground test bed p0419 A81-37340

Inlet distortion and blade vibration in turbomachines p0421 A81-37631

A perspective on developing new inlet distortion measurement and predictive methods
[AIAA PAPER 81-1589] p0507 A81-40964
Turbomachinery noise studies of the AiResearch QCGAT engine with inflow control --- acoustic performance
[AIAA PAPER 81-2049] p0619 A81-48621
Some modal-frequency spectra of fan noise
[AIAA PAPER 81-1990] p0620 A81-48636
Assessment of inflow control structure effectiveness and design system development
[AIAA PAPER 81-2048] p0620 A81-48637
Hyperbolic/parabolic development for the GIM-STAR code --- flow fields in supersonic inlets
[NASA-CR-3369] p0201 N81-16416
An investigation of air solubility in Jet A fuel at high pressures
[NASA-CR-154170] p0344 N81-21211
Top-mounted inlet system feasibility for transonic-supersonic fighter aircraft --- V/STOL aircraft
[NASA-TM-81292] p0428 N81-24066
An investigation of engine influence on inlet performance --- conducted in the Ames 40- by 80-foot wind tunnel

[NASA-CR-166136] p0579 N81-30084
INLET NOZZLES
Jet-diffuser ejector - Attached nozzle design
[NASA-CR-152361] p0278 N81-19412
INLET PRESSURE
A preliminary experimental investigation of the response of a turbojet engine to inlet pressure distortion
p0108 A81-17824
An evaluation of statistical methods for the prediction of maximum time-variant inlet total pressure distortion
[AD-A089817] p0036 N81-11040
INLET TEMPERATURE
Considerations of the use of vitiated preheat --- for engine inlets
p0150 A81-20023
Factors limiting turbine inlet temperatures
p0294 A81-29083
Cooled radial in-flow turbines for advanced gas turbine engines

INSTRUMENT APPROACH
Increasing capacity at Paris airports
[AIAA PAPER 81-0802] p0368 A81-33890
A piloted simulator investigation of static stability and stability/control augmentation effects on helicopter handling qualities for instrument approach
[AHS 80-30] p0476 A81-40160
NASA/FAA flight-test investigation of helicopter microwave landing system approaches
[AHS 80-55] p0478 A81-40180
Evaluation of LORAN-C for non-precision approach applications
p0512 A81-41763
Evaluation of Loran-C for enroute navigation and non-precision approach within the state of Vermont
p0516 A81-42433
Investigation of control, display, and crew-loading requirements for helicopter instrument approach
[AIAA 81-1820] p0555 A81-44110
Automatic helical rotorcraft descent and landing using a Microwave Landing System
[AIAA PAPER 81-1857] p0560 A81-44556
A piloted simulator investigation of static stability and stability/control augmentation effects on helicopter handling qualities for instrument approach
[NASA-TM-81188] p0029 N81-10077
Definition of the problems associated with air traffic control of closely spaced helicopter traffic performing decelerated instrument approaches
[AD-A094073] p0251 N81-18042
In-flight handling qualities investigation of A310 Airbus DLC-configurations on landing approach, using the DFVLR-HFB 320 in-flight simulator (variable stability aircraft) --- instrument flight
[ESA-TT-630] p0276 N81-19135
Cockpit simulation study of use of flight path angle for instrument approaches
[NASA-CR-165708] p0425 N81-24040
INSTRUMENT COMPENSATION
NT TEMPERATURE COMPENSATION
INSTRUMENT ERRORS
An optimum design procedure of total-temperature thermocouple probes
p0108 A81-17807
Approximation of gear transmission error by standard gear errors
[ASME PAPER 80-C2/DET-71] p0117 A81-18646
Evaluation of false alarm information with the ELRA
p0152 A81-20100
Measurement of aircraft speed and altitude --- Book
p0357 A81-32401
Accuracy of noise-modulated radio altimeter
p0359 A81-32694
Orientation of measurement sensors for optimum end-of-life performance
p0360 A81-32697
A microprocessor based land navigator
p0360 A81-32833
Navigation errors encountered using weather-mapping radar for helicopter IFR guidance to oil rigs
[AHS 80-16] p0474 A81-40147
Simulation of Microwave Landing System
p0615 A81-48368
INSTRUMENT FLIGHT RULES
Commercial rotorcraft automatic controls - The next generation
p0470 A81-40113
Navigation errors encountered using weather-mapping radar for helicopter IFR guidance to oil rigs
[AHS 80-16] p0474 A81-40147
Night flight of helicopters
p0510 A81-41335
A flight investigation of static stability, control augmentation, and flight director influences on helicopter IFR handling qualities
p0574 A81-46623
IFR aircraft handled forecast by air route traffic control center, fiscal years 1980-1991
[AD-A090803] p0074 N81-12048
Study of helicopter performance and terminal instrument procedures
[AD-A090052] p0092 N81-13046
Development of a computer program data base of a navigation aid environment for simulated IFR flight and landing studies
[NASA-TM-80064] p0129 N81-13959
Flight tests of IFR landing approach systems for helicopters
p0265 N81-19042
General aviation single pilot IFR autopilot study
p0265 N81-19045
Development and evaluation of a prototype in-flight instrument flight rules (IFR) procedures trainer
[NASA-TM-73292] p0490 N81-26156
Operational problems experienced by single pilots in instrument meteorological conditions
[NASA-CR-166236] p0581 N81-30106

INVESTMENTS
Investment decision-making in international airports
p0113 A81-18079
A controlled evaluation of the differences between two approaches to reliability investment screening
[AD-A087506] p0031 N81-10446

INVISCID FLOW
Nonlinear aerodynamic characteristics of a thin airfoil of arbitrary plane configuration
p0123 A81-19629
Viscous-inviscid interaction on oscillating airfoils in subsonic flow
[AIAA PAPER 81-0051] p0159 A81-20567

New approach to the solution of large, full matrix equations --- Neumann problem for inviscid incompressible flow past airfoils
p0171 A81-21552

Three-dimensional wing boundary layer calculated with eight different methods
p0171 A81-21555

Sound radiation from vortex systems
p0171 A81-21591

Numerical simulation of gross structure of turbulent plane mixing layer by discrete-vortex model
p0228 A81-24078

Calculation of the boundary of a supersonic inviscid jet flowing into a submerged space or a supersonic wake
p0229 A81-24172

A contribution to the computation of transonic supersonic flows over blunt bodies
p0230 A81-24423

Subsonic cascade flow analysis by a finite element method
p0233 A81-25311

On a generalization of Kaden's problem --- of initially planar semi-infinite vortex sheet rollup
p0288 A81-28676

Calculation of supersonic flow around a wing with constant curvature of its leading edges
p0413 A81-35916

Aerodynamic characteristics of wings of arbitrary planform
p0461 A81-39267

Modeling of ramjet combustors using simple reactor theory
[AIAA PAPER 81-1429] p0515 A81-42196

Analysis of calculated three-dimensional inviscid flow fields with embedded shock waves (presentation of a field solution), part 1
[ESA-TT-558] p0022 N81-10017

Supercritical airfoil technology program wake experiments and modeling for fore and aft loaded compressor cascades
[AD-A091378] p0091 N81-13034

An investigation into grid patching techniques
p0137 N81-14708

Finite element analysis of inviscid subsonic boattail flow
[NASA-TM-81650] p0140 N81-14977

Application of transonic potential calculations to aircraft and wind tunnel configurations
p0186 N81-15992

Viscous-inviscid interaction on oscillating airfoils in subsonic flow
[AD-A093970] p0203 N81-16983

Analysis and design of supersonic aircraft based on inviscid nonlinear Eulerian equations. Part 1: Rotational Euler solutions with explicit shock fitting
[AD-A103434] p0637 N81-33192
